

Severe Emotional Disturbance (SED) CRITERIA CHECKLIST

Severe Emotional Disturbance (SED) determination is based on the age of the individual, diagnoses, functional impairment or symptoms, and duration of the disorder. The child/adolescent must meet all of the following criteria:

- 1. **Age:**
 - be a person under the age of 18;
 - OR**
 - be a person between the ages of 18 and 21, who received services prior to the 18th birthday, met criteria for a SED, and demonstrates a continued need for services.

- 2. **Diagnoses:**
Must meet A or B.
 - A. The child/adolescent has an emotional and/or behavioral disorder that has been appropriately diagnosed through the classification system in the current *American Psychiatric Association Diagnostic and Statistical Manual of Mental Disorders; The DC 0 to 5; or International Classification of Diseases* by a licensed Mental Health Professional pursuant to an age appropriate diagnostic process.

 - B. The child has experienced a significant traumatic event, resulting in “complex trauma” - a term which describes children’s exposure to either multiple or prolonged traumatic events, often invasive and interpersonal in nature, or single episode traumatic experiences that have a profound and prolonged impact on normal emotional, neurological, or behavioral development, such as witnessing the death of a caregiver or physical or sexual abuse resulting in the child's loss of a developmentally appropriate sense of a well-ordered and safe environment.
 - The determination that a child is experiencing complex trauma may be made by a licensed behavioral health professional with specific training in the manifestations of traumatic sequelae in children and adolescents, and in developmental processes appropriate to the age of the child, even in the absence of a qualifying diagnosis as in A above.

3. **Functional Impairment:**

The child/adolescent must have a Functional Impairment ,pursuant to the diagnostic formulation as noted above, in two of the listed capacities:

Functioning in self-care:

Impairment in self-care is manifested by a person's consistent inability to take care of personal grooming, hygiene, clothes, and meeting of nutritional needs. The determination of impairment in self care must reflect consideration of developmentally appropriate abilities.

Functioning in community:

Inability to maintain safety without assistance; a consistent lack of age-appropriate behavioral controls, decision-making, judgment and value systems which impact placement stability, potentially leading to out-of-home placement.

Functioning in social relationships:

Impairment of social relationships is manifested by the consistent inability to develop and maintain satisfactory relationships with peers and adults. Children and adolescents exhibit constrictions in their capacities for shared attention, engagement, initiation of two-way effective communication, and shared social problem solving.

Functioning in the family:

Impairment in family function is manifested by a pattern of significantly disruptive behavior exemplified by repeated and/or unprovoked verbal and/or physical aggression towards siblings and/or parents and/or caretakers (e.g., foster parents), disregard for safety and welfare of self or others (e.g., fire setting, serious and chronic destructiveness, inability to conform to reasonable expectations that impact placement stability), impaired relational connection between caregiver and child.

Child-caregiver and family characteristics do not include developmentally based adaptive patterns that support social-emotional well-being. For early childhood functioning, major impairments undermine the fundamental foundation of healthy functioning exhibited by:

- rarely or minimally seeking comfort in distress
- limited positive affect and excessive levels of irritability, sadness or fear
- disruptions in feeding and sleeping patterns
- failure, even in unfamiliar settings, to check back with adult caregivers after venturing away
- willingness to go off with an unfamiliar adult with minimal or no hesitation
- regression of previously learned skills

Functioning at school/work:

Impairment in school/work function is manifested by an inability to pursue educational goals in a typical time frame (e.g., consistently failing grades, repeated truancy, expulsion, property damage or violence toward others); receiving an educational intervention such as an Individualized Education Program (IEP), Behavior Intervention Plan (BIP), or special intervention or accommodations; or the inability to be consistently employed at a self-sustaining level (e.g., inability to conform to work schedule, poor relationships with supervisor and other workers, hostile behavior on the job).

4. **Symptoms:**
Symptoms in one of the following groups:
- Trauma symptoms:*
 Children and adolescents who have been exposed to a single traumatic event or series of discrete events experience a disruption in their age-expected range of emotional, social and cognitive capacities. Such children may exhibit:
- a disruption in a number of basic capacities such as sleep, eating, elimination, attention, impulse control, and mood patterns
 - under-responsivity to sensations and become sensory seeking, physically very active, disruptive, aggressive and/or antisocial behaviors
 - under-responsivity to sensations but not sensory seeking and may shut down further and become lethargic or depressed and difficult to arouse
 - over-responsivity to sensations and become hyper-vigilant or demonstrate fear and panic from being overwhelmed
 - episodes of recurrent flashbacks or dissociation that present as staring or freezing or trauma-specific play reenactment
 - somatic symptoms (e.g. abdominal pain, GI distress, headache)
- Mood and anxiety symptoms*
 The disturbance is excessive and causes clinically significant distress which substantially interferes with or limits the child's role or functioning in family, school, or community activities
- Danger to self, others and property as a result of emotional disturbance:*
 The individual is self-destructive, e.g., at risk for suicide, and/or at risk for causing injury to self, other persons, or significant damage to property.
- Psychotic symptoms:*
 Symptoms are characterized by defective or lost contact with reality, often with hallucinations, delusions, disorganized thinking patterns and/or restricted or flattened affect.
5. **Duration:**
- The disability must be expected to persist for six months or longer.

Serious Mental Illness (SMI) CRITERIA CHECKLIST

Serious Mental Illness (SMI) determination is based on the age of the individual, functional impairment, duration of the disorder and the diagnosis. Adults must meet all of the following four criteria:

- 1. **Age:** Must be an adult 18 years of age or older.
- 2. **Diagnoses:** Have one of the diagnoses as defined under the current *American Psychiatric Association Diagnostic and Statistical Manual of Mental Disorders*. The diagnosis would need to have been determined within the prior 12 months by an appropriately credentialed and licensed professional.
 - Diagnoses codes and descriptions that are found in Appendix A and Appendix B of this document are those providing a primary reason for receiving public system behavioral health services.
- 3. **Functional Impairment:** The disturbance is excessive and causes clinically significant distress or impairment in social, occupational, or other important areas of functioning.
- 4. **Duration:**
 - The disability must be expected to persist for six months or longer.

Person must meet SMI criteria and at least one of the following in A or B:

- A . Symptom Severity and Other Risk Factors
 - Significant current danger to self or others or presence of active symptoms of a SMI.
 - Three or more emergency room visits or at least one psychiatric hospitalization within the last year.
 - Individuals with substance use disorder that complicates SMI and results in worsened intoxicated/withdrawal complications, bio medical conditions, emotional/behavior/cognitive conditions.
 - Person is experiencing trauma symptoms related to sexual assault, domestic violence or other traumatic event.
- B. Co-Occurring Disorders
 - Substance Use Disorder (SUD) diagnosis and any mental illness that affects functionality.
 - SMI or SUD and potentially life-threatening chronic medical condition (e.g., diabetes, HIV/AIDS, hepatitis).
 - SMI or SUD and Developmental Disability.

Supervisory Certification Certification Attestation Application

Supervisory Certification is a major component of a wider workforce development strategy for the State of New Mexico's Behavioral Health service delivery system. The purpose of this certification process is for Behavioral Health Agencies (BHA 432) and Opioid Treatment Programs (OTP 343) to demonstrate that there is: ongoing education, learning and oversight of clinical supervisors and non-independently licensed (NIL) practitioners. Additionally, this certification is in place to support competent consultation and supervision. It is required in order to be eligible for reimbursement for services from Medicaid delivered by a non-independently licensed provider. Refer to The Behavioral Health Policy and Billing Manual (Clinical Supervision and Supervisory Certification sections) for additional information.

Supervisor

Clinical supervisors must adhere to all state board regulations and maintain active licensure in one of the follow categories: LMFT, LPCC, LCSW/LISW or any professional license recognized by the board as a clinical supervisor.

Supervisee

Those who are under supervision must have completed all necessary requirements for their licensure type. Some agencies and programs may require background checks on persons rendering services. This certification excludes any and all provisionally or temporary licensed individuals. The non-independently licensed provider scope of practice includes the following: rendering social work and/or counseling related services, which may include evaluation, assessment, consultation, diagnosing, development of treatment plans, client-centered advocacy, case management and referral, appraisal, crisis intervention education, reporting and record keeping for individuals, couples, families or groups as defined by rule and New Mexico Statutes: Counselors Scope of Practice 61-9A-5, Social workers Scope of Practice 61-31-6. Additional guidelines or rules may exist by the respective professional licensing board which must be followed. The attestation includes specific criteria required under the Supervisory Certification policy. Each area is subject to review and should be substantiated by an organization's identified processes as delineated in policy and procedures (P&Ps), employee handbook, and/or training curriculum. The glossary at the end of this application will further define terminology used herein.

In order to demonstrate appropriate licensure and qualifications of both the rendering non-independently licensed provider and the Clinical Supervisor, the below components will need to be available for review by the state, MCO, or third-party payer upon request:

1. Names and supporting documentation of personnel providing Clinical Supervision within the agency and the criteria used for hiring both supervisors and NILs. Supporting documentation must include:
 - i. Example of hiring criteria or copies of relevant posted positions.

- ii. If the agency contracts with its providers a copy of that agreement for each non-independently licensed provider and supervisor.
- iii. A copy of the Supervisor's license (must be current for upcoming year).
- iv. Proof of Supervisor's attendance for Clinical Supervision training or completed hours as an independently licensed clinician (this should include a copy of board certificate).
- v. A copy of Supervisor's resume to demonstrated supervisory experience.
- vi. Documentation describing appropriate supervisor to supervisee ratios.

2. Supervision logs that document dates and duration of Clinical Supervision for each non-independently licensed provider staff at the agency for the past 90 days or most recent depending on date of hire or contract.

3. Roster for the non-independently licensed providers who will provide services and their designated Supervisor along with;

- ┆ A printout with a date of the license verification from the New Mexico Regulation and Licensing Department (NMRLD) website. We don't require this anymore, however are we still going to require the Master's degree for the LADAC or is this changing? Current CEUs demonstrating that the Clinical Supervisor is approved to provide clinical supervision (LPCC) or the board approval letter (LCSW);
- iii. Demonstrate that the provider (Supervisor and non-independently licensed provider) has an active NPI (National Provider Identifier) number through the National Plan & Provider Enumeration System (NPES).

4. Demonstrate that appropriate services are provided by the non-independently licensed provider in accordance with Service Definitions, CPT code allowances, agency designated fee schedules and contracts with payers, and the relevant NM Statute Scope of Practice criteria.

Ethical and Legal Obligations

BH Clinical Supervision practices must follow the appropriate guidelines for each licensure type as set forth by the respective New Mexico behavioral health licensing board, NM Statute Scope of Practice, and respective national ethics standards, including the American Psychological Association (APA), American Counseling Association (ACA), and the National Association of Social Workers (NASW).

Scopes of Practice (SOP)

Those who are providing clinical supervision must do so within their scope of practice and level of training and education both in terms of their practice and the practice of those they are supervising. Those who are rendering services must also be practicing within their licensure type's legal scope of practice standards as outlined by the respective board and New Mexico statutes and regulations.

It is the responsibility of an agency to be able to demonstrate that the basic standards of BH Clinical Supervision are met through its policies and procedures. Please review the Clinical Supervision Implementation Guide for additional information.

<https://www.nmbhpa.org/clinical-supervision-implementation-guide/>

Policies and Procedures Manual

Clinical Supervision is a way to educate and train those coming into the field or provide guidance to those

who are providing services under specific certification or specialized behavioral health service definitions. This includes providing information on appropriate clinical practice as well as system components that influence billing and reimbursement practices. There are clinical supervision documents that have been developed by the clinical supervision workgroup. For more information on these documents contact Betty Downes at Betty.Downes@state.nm.us.

Clinical Supervision programs must include the below components in a policy and procedures manual. The components must clearly articulate how Clinical Supervision practices are operationalized on a day-to-day basis. Ethical codes of conduct must be incorporated in accordance with relevant guidelines by APA, ACA, and the NASW. Standards of BH Clinical Supervision practices, whether employed or contracted, should address the areas noted below and be available for review:

- a. Informed consent and disclosure guidelines.
- b. Consumer safety.
- c. Privacy and confidentiality.
- d. Record keeping and fees.
- e. Clinical roles and relationships, including patient-therapist relationships and boundaries.
- f. Professional growth and development planning.
- g. Professional competence: training, cultural awareness in practice, self-care, consultation.
- h. Treatment safety and transition planning: termination and referral, end of life care, advanced directives or psychiatric advanced directives (PAD), crisis and safety planning, care coordination, continuity of care.
- i. Assessment and trauma informed clinical practice.
- j. Ethical and legal issues.
- k. Critical incident reporting.
- l. A section on State and other relevant resources for attending to crisis situations including: New Mexico Crisis and Access Line information, Suicide hotlines, and how to call and utilize local Crisis Intervention Team (CIT) services as well as what the agency's procedures are in the event of an emergency.
- m. Population specific: Any provider organization service array applicable training and/or certification requirements/guidelines including child development, trauma informed care, family support, peer recovery, domestic violence, sexual assault, assessments and screening.

Once the agency has presented the Supervisory Certification letter from BHSD to Conduent and the relevant MCOs, and the rostering has been completed, they may utilize the non-independently licensed provider's name and NPI in the rendering field on the claim.

Medicaid ID and NPI

All providers who will be rendering services for Medicaid eligible recipients must have acquired their own Medicaid ID through the Conduent/MAD enrollment process. An individual must have an active NPI (*National Provider Identifier*) number through the *National Plan & Provider Enumeration System* (NPPES). This is required for all providers independent of the agency NPI. All providers must be registered for their own individual Medicaid ID number using their individual NPI.

Credentialing

In accordance with roster practices, all agencies who qualify and that are designated to bill for non-independently licensed provider rendered services must maintain an up-to-date BH Clinical Supervision and non-independently licensed provider roster. Any changes in status of a non-independently licensed provider or respective Supervisor must be reported within seven (7) days as outlined by either the relevant state

agency, the MCO's, and third-party payers as appropriate. Credentialing of licensed practitioners is generally done through CAQH (Council for Affordable Quality Healthcare) but other requirements may be in place depending on a provider's credentials and licensure type. Each MCO or third-party payer will be able to provide their specific requirements.

Change in Agency Address and New Locations

If the agency is changing the location of their practice, the address needs to first be updated with Conduent. Once the change has been accepted, the agency is responsible for notifying BHSD so that a certification letter with the new address can be issued. The agency must also notify BHSD of any policy and procedure changes for the new address. If the agency desires to open a new location, the agency will need to complete the enrollment process with Conduent, as well as submit a separate attestation for that location. Upon approval of the enrollment and attestation, the agency will receive an additional certification letter for the new location.

Documentation Requests and Site Visits

The Human Services Department (HSD) or any of its designated payers may request the agency's policies and procedures pertaining to the Supervisory Certification Protocol at any time. These documents must be made available upon request. HSD/BHSD may conduct site visits, and will notify the agency in advance to schedule a visit before arriving on site.

Instructions:

The Supervisory Certification Attestation shall be completed by both the Executive Director/Chief Executive Officer, and the Clinical Director signed by both parties and notarized by a certified Notary.

Each area is subject to review and should be substantiated by an organization's identified processes as delineated in policy and procedures (P&Ps), employee handbook, and/or training curriculum.

In order for the Supervisor Protocol Attestation to be complete you will to ensure the following:

- ┌ Supervisory Certification policies and procedures are in place for the agency;
- ┌ Supervisory Certification Attestation is signed by the Executive Director/Chief Executive Officer, and the Notary;
- ┌ The roster is complete with the requested information for both the Clinical Supervisor and the non-independently licensed provider;
- ┌ the current CEUs demonstrating that the Clinical Supervisor is approved to provide clinical supervision (LPCC) or the board approval letter (LCSW);
- ┌ BHA 432 or 343 status from Medicaid stating that the agency is certified as as either one of these provider types.
- ┌ Printout with the date from the NMRLD showing the current status of licenses for all providers listed on the roster.

When the Supervisory Certification Attestation is complete, the agency shall retain a notarized copy of the attestation and send the original to:

Behavioral Health Services Division
Attn: Clinical Services
PO Box 2348
Santa Fe, NM 87504

Upon receipt of the attestation, the Clinical Services Team (CST) will have 30 business days to review the information. Based on the review, the CST can approve the attestation or request additional information. If additional information is requested, agencies will have 45 business days to respond from the date of the request. If no response is received, the original attestation request will be considered void. An agency can submit a new attestation at any time.

Once the attestation is approved, a letter of certification will be issued by BHSD to the approved provider type, identified in the Behavioral Health rule. It is the responsibility of the provider organization to notify the MCO(s) with which they are contracted, of the certification status and provide a copy of that letter.

It is the provider agency's responsibility to update the roster each time there is a new non-independently licensed provider or change in clinical supervisor. All pertinent information will also need to be submitted with the roster. Updated rosters and any questions pertaining to this process shall be sent to: bilfornil.bhds@state.nm.us.

Supervisory Certification Attestation

Be sure to follow all of the application's instructions and provide the section and page number that demonstrates compliance with each criteria that can be found in your policies and procedures, handbooks, and/or training manual .

Organization / Agency Information

I, the Executive Director or Chief Executive Officer (circle one) of _____
_____ attest to the following:

Agency Name

1. This agency provides the following services (age of clients, type of interventions, specialty populations, specialty interventions, etc.). If you have identified a specialty please describe additional training and/or certification attained in accordance with state or national requirements/guidelines (If you need additional space please feel free to attach information to the application.)

2. **The agency has policies and procedures** with detailed descriptions of processes for verifying and tracking appropriate level licensures noted for each of the Clinical Supervisors and non-independently licensed providers.

These policies and procedures include time frames for: verifying licenses and any violations on the Licensing Registry, CEU requirements for supervision, renewal dates, whether or not the licensee is a recognized supervisor by their board.

These policies and procedure state that the following are acceptable non-independent licenses (Master’s level or above required): Licensed Mental Health Counselor (LMHC, provider type 445, specialty 122), Licensed Master’s Social Worker (LMSW, provider type 445, specialty 087) Licensed Associate Marriage and Family Therapist (LAMFT provider type 445, specialty 058) and Licensed Alcohol & Drug Abuse Counselor (LADAC, provider type 440, specialty 124).

These policies and procedures state that the following are allowable services within the provider’s scope of practice:

- 90791
- 90846, 90847, 90849, 90853 – family and group psychotherapy

_____ Initial here

3. **The agency has policy and procedure** that states that the following are acceptable independent licenses for the role of clinical supervisor (Master’s level or higher required), as identified by the State of New Mexico and/or the NMRLD.

_____ Initial here

4. **The agency has policy and procedure** that addresses record keeping processes for employee and contractor files. This policy and procedure include a description of the contents and maintenance of records, background checks, qualifications, transcripts, licensure, job description, written contract, and all training and orientations attended.

_____ Initial here

5. **The agency has policy and procedure** that describes the agency’s understanding of ensuring clinicians have the

following with expected time frames for completion (i.e. at hire, within 30 days, within 90 days, etc.):

- CAQH
- NPI per the NPPES
- Medicaid provider status
- Rostering with MCO's

_____ Initial here

6. **The agency has policy and procedure** that ensures the following documentation is on record:

- Copy of all clinical licenses (independent and non-independent)
- Proof of clinical supervisor status from the appropriate board and accompanying Continuing Education Units (CEUs).
- Liability insurance for non-independent providers and supervisors.
- Job Description for non-independent providers (include qualifications and outline of employment responsibilities)
- Job Description for supervisors (include qualifications and responsibilities of licensed clinicians to include supervisory duties and scope of services rendered)
- Contract or employment agreement.
- Supervision documentation or log for non-independent providers.
- Supervision and consultation documentation for independently licensed providers.
- Quality Service Review or similar reflective improvement practice.

_____ Initial here

7. **The agency has policy and procedure** that describes in detail the orientation process for new employees to ensure that providers have working knowledge of the agency's

August 2018 Supervisory Certification 10

practices and operations. These policies and procedures include an employee handbook (if applicable), and/or other relevant materials. These policies and procedures are reviewed annually.

_____ Initial here

8. **The agency has policy and procedure** that describes appropriate accommodations and rooms for supervision, monitoring, and maintaining consumer confidentiality.

_____ Initial here

10. **The agency has policy and procedure** that describes in detail expected provider response to any safety issues.

_____ Initial here

11. **The agency has practices that** demonstrate that the environment supports trauma informed care (i.e. lighting, client and staff safety, and accessibility to include ADA accommodations).

_____ Initial here

CLINICAL PRACTICE/TRAINING

I as the Clinical Director or Clinical Supervisor (circle one) for _____ attest to the following:

Agency Name

1. **The agency has policy and procedure that** describes the process by which the appropriate clinical supervision will be provided and documented. These policies and procedures will describe in detail guidelines specified per applicable licensing board or regulatory entity. These policies and procedures will include descriptions of frequency, duration, group supervision (number of participants/supervisees allowed), and individual supervision to be provided.

_____ Initial

2. **The agency has policy and procedure that** describes the ongoing education and training of non-independently licensed providers. These policies and procedures include the following required training/education to be provided to non-independently licensed providers and supervisors:

- Treatment planning (intake to discharge)

Crisis planning with consumers

- Documentation (requirements)
- Clinical reasoning/case formulation
- Clinical practice (roles and responsibilities)
- Cultural awareness
- Trauma informed care
- Critical incident reporting/ abuse, neglect and exploitation
- Resource information and referral
- Crisis management/local, state and national help/hotlines, county emergency plans and procedures
- Boundaries with clients
- Code of ethics as applicable from associations APA, ACA, or, NASW, state regulations, and national standards
- Continuum of care (Termination of Care, Referral, End of life Care, advance directives, psychiatric advance directives)
- Rendering services in alignment with applicable state laws and regulations (Medicaid and non-Medicaid funds), documentation requirements, service definitions, and CPT code allowances
- Self-care
- Informed Consent and Disclosure of protected information guidelines
- Maintaining privacy/confidentiality
- Client Records (securing client information-record keeping)

_____ Initial here

3. **The agency has policy and procedure that** ensures ongoing professional development, supervision and/ or professional consultation for the clinical supervisor. The policy and procedure includes risk management, ethics, and legal implications of supervision, supervision theory, training in areas of agency specialty, remediation, and documentation.

_____ Initial here

4. **The agency has policy and procedure that** describes the agencies supervision model and philosophy. This policy and procedure includes ratio of non-independently licensed providers to clinical supervisors.

_____Initial here

5. **The agency has policy and procedure that** describes what a supervision agreement is and why it is used between the clinical supervisor and the non-independently licensed provider. The policy and procedure describes in detail when the supervision agreement is reviewed initially and ongoing. These policies and procedures outline the rights and responsibilities of the supervisor and supervisee.

Glossary of Terms

Agency – the organization that is licensed as a BHA - 432 or OTP - 343.

BH – Behavioral Health.

BHA-432 – Behavioral Health Agency-432 as defined by the Medical Assistance Division (MAD) Behavioral Health Provider Type list. The number designation is a part of a provider type classification system that is utilized by MAD for Medicaid enrollment with Xerox.

BHSD – Behavioral Health Services Division. A division of the State of New Mexico Human Services Department (HSD) overseeing BH providers in the state primarily for adult prevention, treatment, and recovery programs and services.

BIL4NILs – Billing for non-independently licensed practitioners.

CAQH – Council for Affordable Quality Healthcare.

Clinical Supervisor – Independently licensed practitioner or clinician. The reference in this document is specific to clinicians who have acquired a valid license to practice and oversee those who are NILs in the field of Behavioral Health by a State of New Mexico official licensing board as outlined by New Mexico Statutes and Scope of Practice and other specific Rules and Laws of the respective board.

Facility – Used interchangeably with Agency or Organization in reference to the physical location of that entity.

LOD – Letter of Direction. These are letters from the State to MCO's or other entities giving instruction on allowances or restrictions in terms of practice and delivery of services within their provider networks or internal practices.

MCO – Managed Care Organization. In the case of BH providers and services, the MCO contracts with the HSD to reimburse for services rendered under Medicaid.

NIL – Non-independently licensed practitioner or clinician. The reference to NILs in this document and BIL4NILs are clinicians who have acquired a valid license to practice in the field of Behavioral Health by a State of New Mexico official licensing board as outlined by New Mexico Statutes and Scope of Practice.

NPI and NPPES – National Provider Identifier and National Plan and Provider Enumeration System.

P&P – Policies and Procedures. As referenced in this document can include the agency policies and procedures, the training curriculum relative to staff orientation, or employee handbook.

Practitioner / Clinician – State of New Mexico boards licensed clinician able to render services under Medicaid or other state funds for specific services within Behavioral Health according to New Mexico state Statute and Licensing board regulations Scope of Practice.

Provider – This term is used interchangeably to refer to an organization/agency or the individual practitioner.

Rule or Regulation – New Mexico State or Federally applicable legal Statutes, Administrative Codes, including State Departmental Policies and Procedures for licensing or certification purposes.

SOW/SOP – Scope of Work or Scope of Practice.

Supplement – A Supplement is an add-on of information or a directive to a contract obligation between a state entity and for example the MCOs.

Care Coordination

Care Coordination is a contracted service through the MCO's. Please contact your MCO's for more information on how this service can assist in helping your clients navigate appropriate services.

BECOMING A BH PUBLIC SYSTEM PROVIDER IN NEW MEXICO

Overview of basic steps for an individual:

1. Completion of required training or a degree to acquire a license to practice within the field of Behavioral Health through one of the State of New Mexico Licensing Boards as outlined by New Mexico Statute for Scope of Practice. This can include acquiring certification to provide services within a specific type of facility/organization for a specific service as outlined in State Medicaid Regulations or other State Department specific rules.
2. Acquire an NPI number.
3. Acquire a Medicaid Enrollment ID number.
4. Register and credential with CAQH.
5. Roster with your agency's contracted MCO(s).

1. Licensing and Certification Boards

Licensure Boards

New Mexico Medical Board <http://www.nmmb.state.nm.us/>

Board of Psychologist Examiners http://www.rld.state.nm.us/boards/psychologist_examiners.aspx

Counseling and Therapy Practice Board http://www.rld.state.nm.us/boards/counseling_and_therapy_practice.aspx

Social Work Examiners Board http://www.rld.state.nm.us/boards/social_work.aspx

New Mexico Board of Nursing <http://nmbon.sks.com/>

Certification Boards and Para-Professionals

New Mexico Credentialing Board for New Mexico Professionals <http://www.nmcbbhp.org/>

Office of Community Health Workers <http://nmhealth.org/about/phd/hsb/ochw/>

2. National Provider Identifier (NPI) by NPPES

The Administrative Simplification provisions of the *Health Insurance Portability and Accountability Act of 1996 (HIPAA)* mandated the adoption of standard unique identifiers for health care providers and

health plans. The purpose of these provisions is to improve the efficiency and effectiveness of the electronic transmission of health information. The *Centers for Medicare & Medicaid Services (CMS)* has developed the *National Plan and Provider Enumeration System (NPPES)* to assign these unique identifiers. The website for NPPES is: <https://nppes.cms.hhs.gov/NPPES/Welcome.do>

3. Medicaid Enrollment ID

The process of acquiring a State of New Mexico provider Medicaid ID is done through the Medical Assistance Division (MAD) Medicaid Portal (Xerox). If the application is completed with all the required information, the process should take no more than 7-10 business days.

Website: <https://nmmedicaid.acs-inc.com/static/index.htm>

4. Provider Credentialing with CAQH

Provider credentialing is a process that is done through the CAQH Universal Provider Datasource (CAQH ProView – developed by the Council for Affordable Quality Healthcare). This is a combined effort and requirement between the MCOs and CAQH. All MCO's will require credentialing. Their process can take upwards of 45 days provided that the credentialing information is complete.

Website: <http://www.caqh.org/solutions/caqh-proview-faqs>

Provider assistance: Email providerhelp@proview.caqh.org or call: 888-599-1771.

Registration: <https://proview.caqh.org/PR/Registration>

Completing the online form requires five steps:

1. Register with CAQH ProView.
2. Complete the online application and review the data.
3. Authorize access to the information.
4. Verify the data and/or attest to it.
5. Upload and submit supporting documents.

The provider data profile created in CAQH ProView meet the NCQA requirements for credentialing application content in CR3, Element C. NCQA reviews CAQH ProView output against the appropriate elements.

5. Rostering with MCOs

The MCO's each have a provider network manual or handbook that should be consulted as to the appropriate path to rostering providers within an organization. Generally this is done through the CEO or assigned administrative personnel between an agency and the contracted MCO. All MCO's have a common form to roster clinicians who are credentialed to render services under public funds.

NM BH LICENSING STATUTES AND REGULATIONS

Provider licensing by primary boards for NILs

Licensures for behavioral health practitioners are issued by different boards depending on the education and training of the practitioner. Each board has its own regulations starting with New Mexico Statutes Annotated (NMSAs) and more specific New Mexico Administrative Codes (NMACs). These include licensure requirements, approved supervisors, and CEU and renewal criteria.

In general, statutes can be searched and reviewed at:

<http://www.nmonesource.com/nmnxtadmin/nmpublic.aspx>

New Mexico Compilation Commission

Specific rules (NMACs) for licensure requirements and Scopes of Practice, as outlined by Statutes, can be found at the individual Board site pages for Rules and Laws either by clicking on their links for the NM Compilation Commission logo (displayed above) or the icons noted below.

NM Board of Social Work Examiners

Website: http://www.rld.state.nm.us/boards/Social_Work_Rules_and_Laws.aspx

Statute and Scope of Practice for Social Workers: Chapter 61 Occupational and Professional Licensing
> Article 31 Social Work Practice

Counseling and Therapy Practice Board

http://www.rld.state.nm.us/boards/Counseling_and_Therapy_Practice_Rules_and_Laws.aspx

Statute and Scope of Practice for Counselors: Article 9A Counseling and Therapy, 61-9A-1 through 61-9A-30

NM SERVICE DELIVERY RESOURCES AND POLICIES

Rendering services and seeking reimbursement within Medicaid or other state funds has several requirements. Be sure to be familiar with each of them including the policies of the Managed Care Organizations (MCOs) that your agency contracts with. Each MCO has their own provider manual that you will want to be familiar with. Some NMACs below may not apply to all providers or all services. If you have questions, be sure to contact our clinical team, your MCO, or the Medical Assistance Division (MAD).

New Mexico Administrative Codes (NMAC) Search Engine:

<http://164.64.110.239/nmac/cgi-bin/hse/homepagesearchengine.exe>

Access and Links to All HSD Program Rules by Categories:

Billing for Medicaid services.

☐ 8.302.1 NMAC – Social Services, General Provider Policies

- o Eligible providers
- o Provider responsibilities and requirements
- o Eligible Medicaid recipients
- o Nondiscrimination
- o Record keeping and documentation requirements
- o Patient confidentiality
- o Provider disclosure
- o Termination of provider status

☐ 8.302.2 NMAC – Social Services, Billing for Medicaid Services

- o Claims limitations
- o Dual-eligible recipients (Medicare/Medicaid)
- o CPT/HCPCS service unit time frames
- o Co-payments
- o Timely filing

☐ 8.310.2 NMAC – Social Services, Health Care Professional Services, General Benefit Description

☐ 8.321.2 NMAC – Social Services, Specialized Behavioral Health Services, Specialized Behavioral Health Provider Enrollment and Reimbursement

Medicare/Medicaid

There are special regulations governing those who are Medicare eligible and/or dual eligible. While some provider licensure types may not be eligible to provide services under Medicare, it is important not to turn away clients before fully understanding the process for coverage and eligibility within both Medicare and Medicaid. Be sure to contact your contracted MCO and review all applicable regulations at the main HDS website in the “Provider” section, including the following rules for direction:

Medicaid’s relationship to Medicare – 8.310.2.10 NMAC

Dual eligibility - 8.302.2.12 NMAC

Additional rules that apply to some services and providers

7.20.2 NMAC – Health, Mental Health, Comprehensive Behavioral Health Standards

7.21.1 NMAC – Health, Behavioral Health, General Provisions

7.32.2 NMAC – Health, Alcohol and Drug Abuse, Admission Criteria for Alcohol Substance Service

Level of Care Guidelines (LOCG) and Prior Authorization

Be sure to contact your MCO as to the appropriate forms and processes for both LOCG and Prior Authorization services, including treatment plans and specialty services.

Complete sets of rules under the Human Services Department can be found at:

<http://www.hsd.state.nm.us/providers/rules-nm-administrative-code-.aspx>

Services and Definitions

<http://www.bhc.state.nm.us/BHServices/ServiceDefinition.html>

Critical Incident Reporting

It is important to work with your contracted MCO’s, Optum Health NM, and/or Xerox as appropriate on reporting critical incidents. Each New Mexico State Department may have its own reporting protocols. Anyone billing Medicaid, state, or other federal funds received through the state must report critical incidents. There is a HSD/BHSD state issued BH CIR Protocol issued as of 2015 that all payors have been provided, that protocol is downloadable from the HSD Portal which is an online entry system that requires login. Please use the email address at the portal to request further information about using the portal. The CIR portal can be found at:

<https://criticalincident.hsd.state.nm.us/Login.aspx?ReturnUrl=%2f>

Technical Assistance

You may request Technical Assistance (TA) from either the MCO’s or the State Department from which you are seeking reimbursement to help inform your practice and to understand how the rules above apply and/or should be operationalized.

Email: bilfronil.bhsd@state.nm.us for information on TA for behavioral health related service and program delivery or provider allowances.

IMPORTANT NATIONAL RESOURCES AND POLICIES

CARF – Commission on Accreditation of Rehabilitation Facilities. Website: <http://www.carf.org/home/>

APPENDIX A – Centennial Care Behavioral Health Critical Incident Report Form - Updated December 2017

Centennial Care Behavioral Health Critical Incident Report Form

**You must report an incident within 24 hours of becoming aware of it.
In the event that an incident occurs on a weekend or holiday, report the incident next business day.**

In addition to notifying the MCO, providers must report Abuse, Neglect and Exploitation to:

Adult Protective Service (APS): Telephone: (866) 654-3219 Fax: (505) 476-4913

Child Protective Service (CPS): Telephone: (855) 333-7233 Fax: (505) 841-6691

BHSD Fax: 505-476-9272

Member Centennial Care Category of Eligibility #:

The HSD web portal accepts COEs

001, 003, 004, 081, 083, 084, 090, 091, 092, 093, 094, 95, 100w/NFLOC 200w/NFLOC

Be sure that clinical notes are clear and adequate, do not use acronyms if at all avoidable, and diagnoses should contain a valid code and definition from the current DSM as relevant.

INTRODUCTION

This document is a product of a collaborative effort among the Human Services Department (HSD), Behavioral Health Services Division (BHSD), the Children, Youth and Families Department, Children's Behavioral Health Division, Managed Care Organizations (MCOs), and The New Mexico Behavioral Health Provider Association. The goal in developing this document is to develop a one-stop reference guide for behavioral health providers who are required to report incidents.

This document is to assist providers in filing critical incidents for those members whose category of eligibility falls outside of the fourteen categories that are reported on the HSD portal.

This document should be considered a summary and supplement to already existing legal contracts and regulations. It is to be used to delineate more clearly the foundation of principles that have and will continue to inform critical incident reporting for recipients of behavioral health services. This document replaces previously distributed, training and instructional materials for Behavioral Health Critical Incident Reporting. The development of this document included a review of already existing literature including but not limited to:

- New Mexico Administrative Code Incident NMAC 7.1.13 Reporting, Intake, Processing and Training Requirements
- Managed Care Policy Manual, January 1, 2014,
- NMAC 8.308.2 Specialized Behavioral Health Provider Enrollment and Reimbursement
- NMAC 7.20.11 Certification Requirements For Child And Adolescent Mental Health Services
- HSD and other training material previously developed and utilized.

Behavioral Health Critical Incident reporting is part of ensuring that all New Mexico adults and children are receiving quality healthcare services through Centennial Care and that they are free from abuse, neglect, and exploitation. It is expected that providers of services have a robust quality assurance program that includes management of critical incidents. Ensuring quality of service is a means for continued evaluation and risk management.

A reportable Behavioral Health Critical Incident is defined as:

A reportable event is any Sentinel event defined as an “unexpected” occurrence involving death or serious physical or psychological injury. “Serious injury” specifically includes loss of limb or function. Please see Terms and Definitions on page 8, for clarification.

WHY

Critical Incident reporting is a mechanism to ensure the health and safety of State of New Mexico consumers who are receiving behavioral health services through contracts with Managed Care Organizations (MCOs), Fee for Service providers or with the State's Administrative Service Organization (ASO). Reporting facilitates a process of ongoing evaluation to address concerns that help improve service quality by identifying important issues. Principles and regulation that further inform reporting requirements:

- Staff must receive initial and ongoing training to be competent to respond to, report, and document incidents, in a timely and accurate manner.
- Recipients, legal representatives, and guardians must be made aware of and have available incident reporting processes.
- An incident must be reported before it can be investigated.
- New Mexico State law requires reporting alleged incidents.
 - Adult Protective Services (APS) – NMSA 1978, Chapter 27 Public Assistance, Article 7 Adult Protective Services, and NMAC 8.11.3, <http://www.nmcpr.state.nm.us/nmac/parts/title08/08.011.0003.htm>
 - Department of Health - 7.1.13 NMAC, <http://www.nmcpr.state.nm.us/nmac/parts/title07/07.001.0013.htm>
 - Human Services Department, <http://www.hsd.state.nm.us/providers/critical-incident-reporting.aspx> and <http://www.nmcpr.state.nm.us/nmac/parts/title08/08.308.0021.htm>
 - Children, Youth and Families Department <http://164.64.110.239/nmac/parts/title07/07.020.0011.htm>

Other resources regarding requirements for reporting incidents in New Mexico are listed below. Be sure to check the proper regulations, with your MCO contractors, and state entities with which you are working on specific or unique reporting requirements. A referral to the specific agencies may be required:

- Department of Health- Division of Health Improvement (Developmental Disability Waiver & Medical Fragile) DHI - DOH/DHI/IMB:
Phone: 505-476-9012
Fax: 800-584-6057
<https://nmhealth.org/about/dhi/ane/racp/>
Hotline to report abuse: 800-445-6242
- Children, Youth and Families Department (CYFD), Program Operations Bureau (POB):
Providers of Residential Treatment Services, Group Home Services, Treatment Foster Care, Day Treatment Services, Comprehensive Community Support Services, Behavior Management Services, Crisis Shelter services must contact their LCA liaison.
<https://cyfd.org/licensing-certification>

- Children, Youth and Families Department (CYFD), Child Protective Services (CPS)
Statewide Central Intake (SCI) at
Phone: 1-855-333-SAFE [7233] or #SAFE from a cell phone
Fax: 505-841-6691

WHO

Any individual who, in good faith, reports an incident or makes an allegation regarding abuse, neglect, or exploitation will be free from any form of retaliation.

For any consumer involved in a critical incident:

1. For whom the services are paid by:
 - a. Medicaid through a managed care organization (MCO) including Fee for Service BH funding, OR
 - b. BH funding through an Administrative Service Organization provider (ASO), AND
2. That consumer is or has been receiving one of the services below; AND
3. Is or has been in your care, your agency's care, or been referred out to another provider by you in the last 30 days and is not considered discharged

You are required to report the incident in the context of the What, When, and How.

Services:

ACT – Assertive Community Treatment
 Acute Inpatient Hospitalization
 ARTC – Accredited Residential Treatment Center
 BHA – Behavioral Health Agency
 BMS – Behavior Management Services
 CCSS – Comprehensive Community Support Services
 CMHC – Community Mental Health Center
 CSA – Core Service Agency
 Detox (Excluding Medical Detox)
 DT - Day Treatment
 GH - Group Home
 IHS- Indian Health Services
 IOP – Intensive Out-Patient
 MST – Multi Systematic Therapy
 OTP- Opioid Treatment Program
 PSR – Psycho Social Rehabilitation
 RTC – Non-Accredited Residential Treatment Center
 TFC I – Treatment Foster Care
 TFC II – Treatment Foster Care
 TLS – Transitional Living Services
 Rural Health Centers
 Other Certified Services (specify)
 Other Outpatient Service (specify)

PROCESS

Proceed through the next set of pages in this document for clarification on additional considerations for reporting including the what, when, where and how.

WHAT

A reportable Behavioral Health Critical Incident:

A reportable event is any Sentinel event defined as an “unexpected” occurrence involving death or serious physical or psychological injury. “Serious injury” specifically includes loss of limb or function.

WHEN

A behavioral health provider/agency delivering an authorized service must submit incident reports within 24 hours of knowledge of the occurrence or in the event that an incident occurs on a weekend or holiday, report the incident next business day, NMAC 7.1.13.7 to the appropriate State designations and/or MCOs. Other reporting requirements may be applicable with respect to APS, CPS, LCA, or professional licensing boards. Be familiar with those if you are working with children or adults that fall under special protections.

WHERE & HOW

This document is to assist providers in filing critical incidents for those members whose category of eligibility falls outside of these fourteen categories that are reported on the HSD Critical-Incident-Portal.

For approval to access the HSD Critical Incident Portal email: HSD-QB-CIR@state.nm.us for credentials. The HSD Critical-Incident-Portal is located at: <https://criticalincident.hsd.state.nm.us>

The process for submitting reports include fax and/or secure email for all Categories of Eligibility (COEs) outside of these 14. When filing with each MCO please refer to the following information:

The following categories of eligibility are reportable via the HSD portal:

- 100 with NFLOC
- 200 with NFLOC
- COE 81
- COE 83
- COE 84
- COE 90
- COE 91
- COE 92
- COE 93
- COE 94
- COE 95 *
- COE 001
- COE 003
- COE 004

* Although COE 095 is listed on the HSD CIR Portal as being reportable through that website, the correct method for reporting CIRs associated with COE 095 is to report to the NM Department of Health (DOH) Incident Management Bureau (contact information listed below).

The categories of eligibility 095 (Medically Fragile Waiver) or 096 (Developmental Disability Waiver) should be reported to:

- NM Department of Health (DOH) Incident Management Bureau:
Phone: (800) 445-6242
Fax: 505-584-6057

If not using the HSD Critical Incident Portal, the written form can be submitted via below:

- Centennial Care – Medicaid with MCO:
 - Blue Cross Blue Shield (BCBSNM) – Phone: 855-699-0042, Fax: 505-816-5831
Email: HCSC_BCBS_SPHI@bcbstx.com
 - Molina – Fax: 855-260-8737
Email: MolinaNewMexicoCIR@Molinahealthcare.com
 - United Health Care (UHC) – Fax: 866-751-2449
Email: qm-nm@uhc.com
 - Presbyterian – Fax: 505-213-0686
Email: Criticalincident@phs.org
- Human Services Department/ Medical Assistance Division: - Fee-For-Service,
Fax: 505-827-3126
- Children Youth and Family Department/ Program Operations Bureau: For a service licensed or certified by CYFD/POB fax report to 505-827-4595

All CIRs sent on behalf of non-Medicaid clients should be reported to BHSD via fax to: 505-476-9272.

The CIR Form and CIR Protocol can be found on the HSD website:
<http://www.hsd.state.nm.us/providers/critical-incident-reporting.aspx>

If there are questions about critical incident reporting for BHSD clients, send these to:
bh.qualityteam@state.nm.us

If there are questions about critical incident reporting or COEs for Medicaid clients, send these to: HSD-QB-CIR@state.nm.us

TERMS AND DEFINITIONS of SENTINEL EVENTS

Sentinel Events are drawn from the Joint Commission standards are broadly defined as an occurrence involving death or serious physical or psychological injury, or the risk thereof. The sentinel events listed below appear on the Critical Incident Reporting form-Appendix A and should be reported to BHSD.

- Severe Harm
 - Permanent harm
 - Severe temporary harm
 - Severe temporary harm is critical, potentially life-threatening harm lasting for a limited time with no permanent residual, but requires transfer to a higher level of care/monitoring for a prolonged period of time, transfer to a higher level of care for a life-threatening condition, or additional major surgery, procedure, or treatment to resolve the condition.
 - Consumer towards other, not involving law enforcement.

- Missing recipients
 - Abduction
 - Abduction of any individual served receiving care, treatment, or services.
 - Elopement
 - Any elopement (that is, unauthorized departure) of a consumer from a staffed around-the-clock care setting (including the ED) leading to the death, permanent harm or severe temporary harm of the individual served.

- Sexual Incidents
 - Sexual abuse/assault (including rape) as a sentinel event is defined as nonconsensual sexual contact involving a consumer and another consumer, staff member, or other perpetrator while being treated or on the premises of the organization, including oral, vaginal, or anal penetration or fondling of the consumer's sex organ(s) by another individual's hand, sex organ, or object. One or more of the following must be present to determine that it is a sentinel event:
 - Any staff-witnessed sexual contact as described above
 - Admission by the perpetrator that sexual contact, as described above, occurred on the premises
 - Sufficient clinical evidence obtained by the organization to support allegations of unconsented sexual contact.
 - Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of any individual served receiving care, treatment, or services while receiving services at the organization
 - Rape, assault (leading to death, permanent harm, or severe temporary harm), or homicide of a staff member, licensed independent practitioner, visitor, or vendor while on site at the organization.

- Flame or unanticipated smoke, heat, or flashes occurring during an episode of patient care.
 - Unsafe condition which creates, or may create, a threat to the life, health, or safety of the recipient.

- Death
 - Unknown- requiring follow up with Office of Medical Examiner
 - Suicide of any individual served currently receiving care, treatment, or services at an agency or provider or within 72 hours of discharge, including from an organization's emergency department (ED).
 - Medication/treatment error(s)
 - Under or overdose or medication errors requiring treatment.
 - Natural causes
 - Accident
 - Secondary to use of restraints
 - Including restraints, seclusion, and therapeutic holds.
 - Member death by homicide

Tips for Strengthening Frontline Practice

Practice Area: Guiding Principles of Practice

Guiding Principles for Providing High Quality Practice

GUIDING PRINCIPLES. High quality practice is: • Person-centered. • Strengths-based. • Solution-focused. • Wellness-, resiliency- and recovery-oriented • Trauma-informed. • Outcome-focused and results-driven.

Key Concepts

Person-Centered. Person-Centered Care is an approach designed to assist someone in planning and achieving life goals and supports. It was originally used as a life planning model to enable individuals with disabilities and requiring support to increase their personal self-determination and improve their own independence. It is accepted as evidence based practice. Person-centered care is currently becoming the standard in many areas of practice and is the guiding philosophy behind the integration of medical and behavioral health care. It is evident that individuals and families are more invested in any process where they feel they are an integral part. Self-Directed Care is built upon person-centered care principles and practices.

Strengths-Based. Strengths-based practice is person-centered, with a focus on future outcomes and strengths that the people bring to a problem or crisis. This approach enhances the capacities of individuals and families to deal with their own challenges. Key features of this approach include:

- Strengths-based practice assesses the inherent strengths of a person or family and then builds on those strengths when addressing life changes, recovery and empowerment.
- It avoids the use of stigmatizing language or terms that families use on themselves and eventually identify with, accept, and feel helpless to change.
- It fosters hope by focusing on what has been historically successful for the person and builds on these past successes to support positive future changes.
- It inventories the positive building blocks that already exist in his/her environment that can serve as the foundation for growth and change.

Solution-Focused. This approach is future-focused, goal-directed, and focuses on solutions, rather than on the problems that brought the person to seek help. It targets the desired outcomes of intervention as a solution rather than focusing on the symptoms or issues identified at intake. This technique gives attention to the present and the future desires of the person, rather than focusing on the past experiences. The practitioner encourages the person to imagine their future as they want it to be and then the practitioner and person collaborate on a series of steps to achieve that goal. Solution-focused practice aims to bring about the person's or family's desired change in the least amount of time.

Wellness-, Resiliency-, Recovery-Oriented. To provide effective interventions, the practice used for a youth or an adult should support wellness, youth resiliency, and adult recovery: • Wellness is an active process in which a person becomes aware of and makes choices toward a more healthy and successful existence. Wellness is a conscious, self-directed, and evolving process of achieving full potential which is multidimensional and holistic, encompassing lifestyle, physical, mental and spiritual well-being, and the environment. • Resiliency is the process of managing stress and functioning well when faced with adversity or trauma. Youth are resilient when they are able to use their inner strengths to positively meet challenges, manage adversities, heal from the effects of trauma, and thrive in life given their unique characteristics, goals, and circumstances. A youth's resilience (self-efficacy) is aided by a trusting relationship with a caring, encouraging, and competent adult who provides positive guidance and promotes high expectations. • Recovery is a process through which persons improve their health and wellness, live a self-directed life, and strive to reach their full potential. Intervention and goals are developed in accordance with the guiding principles of recovery, which are: hope, person-driven, holistic, peer supported, relational, responsive to culture and to trauma, focused on strengths and responsibility, and respectful.

Trauma-Informed. To provide trauma-informed care to youth or adults receiving services, practitioners should understand the impact of trauma on child development and on adult behavior and learn how to effectively minimize its effects without causing additional trauma. A growing body of evidence indicates maltreatment can alter brain functioning and consequently affect mental, physical, emotional, and behavioral development (often called socio-emotional development). Early intervention by human service practitioners provides the opportunity to identify a youth's developmental concerns and help families receive the support they need to reduce any long-term effects. Practices for providing trauma-informed care should be used for adults who have experienced complex trauma and who have lingering adverse affects of trauma today.

Outcome-Focused and Results-Driven. Desired outcomes guide the intervention process and can best be stated as life-change outcomes (related to well-being, essential supports, daily functioning, and/or role fulfillment). Goals are used by the person and his/her team to select strategies, supports, and services for working toward goal attainment. Delivery of intervention strategies and supports is carefully tracked to determine: 1) whether the strategies and supports are being provided in an adequate manner; 2) whether the strategies are working or not working based on progress being made; and, 3) whether the outcome has been met. Case practice decisions are informed by the progress (or lack of progress) being made toward the attainment of planned goals, and when a strategy or provider of the strategy is not working effectively, the practitioner quickly recognizes the failure and promptly replaces the provider or strategy.

Tips for Strengthening Frontline Practice

Practice Wheel: Practice Functions Illustration

Case Practice Is Performed to Produce Positive Life Changes for Persons Served

Public service systems exist to help citizens experiencing life-disrupting needs or threats of harm to get better, do better, and stay better in daily life. The collective set of actions used for interventions to alleviate the needs or threats is referred to as *practice*. The purpose of practice is helping a person in need or at risk of harm to achieve and maintain, where necessary, adequate and ongoing levels of:

- Well-being (e.g., safety, stability, physical and emotional health, sobriety, recovery)
- Essential supports for daily living (e.g., housing, food, income, health care, child care),
- Daily functioning (i.e., basic tasks involved in daily living, as appropriate to a person's life stage and ability)
- Fulfillment of key life roles (e.g., a youth being a successful student or an adult being a successful parent or employee).

Typical functions in a practice model include engagement, understanding, defining the results to be achieved, selection and use of

life change strategies and supports, resourcing and delivery of planned strategies, and the tracking and adjusting strategies until desired outcomes are achieved.

A Case Practice Model Defines Functions Used by Practitioners to Get Results

A public agency's Practice Model defines basic functions used by frontline practitioners to join with persons receiving services to bring about a positive life change process that helps them get better, do better, and stay better. It encompasses the core values of the agency (e.g., use of person-centered care principles) and defines the fundamental expectations concerning working relationships, integration of efforts among the practitioners serving a person in need, and essential action patterns or functions associated with effective case practice. An agency's Practice Model becomes a central organizer for training of frontline staff, supervision, performance measurement, and accountability.

The *practice wheel* shown below illustrates basic practice functions typically used by agencies serving adults for reasons of improving wellness, youth resiliency, adult recovery, and greater independence from public service systems.

Practice Wheel: Functions in Integrated Care Practice

Practice Functions May Occur Interactively, Concurrently, and Progressively

Tips for Strengthening Frontline Practice

Practice Area: Recognition, Connection, Rapport

Desired Outcomes of Practice

RECOGNITION, CONNECTION & RAPPORT: • The person's sense of identity, culture, values and preferences, social network, and life experiences are recognized by practitioners involved with the person. • Any barriers to personal connection and acceptance are recognized and resolved. • Necessary conditions for building mutual respect and rapport are established as a basis for successful engagement.

Key Concepts

Building a relationship with a person entering services requires practitioners to recognize the nature of the person's situation and life story and to discover the circumstances that have brought the person into agency services. One of the most important first steps is recognition of any barriers that could thwart formation of positive connections with the person which could undermine acceptance and rapport building necessary for successful engagement.

Practitioners should take steps for creating conditions necessary for building mutual respect and rapport required in developing trust-based working relationships. Also key to successful engagement and connection is the recognition of the person's sense of identity, culture, values and preferences (especially any arising from race, sexual identity, and/or religious conviction), social and economic supports, and life-shaping experiences (e.g., adverse childhood experiences, combat trauma, addiction, emigration, poverty) that explain the person's life story and reasons for entry into services.

Persons coming into service require use of culturally relevant and responsive interactions and interventions in order to successfully connect, educate, assist, and support them moving through the system. Responsiveness includes valuing cultural diversity, understanding how it impacts family functioning in a different culture, and adapting service processes to meet the needs of culturally diverse groups of persons receiving services. Properly applied in practice, cultural responsiveness reduces the likelihood that matters of language, culture, custom, identity, value, or belief will prevent or reduce the effectiveness of life change efforts undertaken via interventions, supports, and services. A person's identity [e.g., race, tribe, ethnicity; social group; sexual orientation; religion; or disability, such as deafness] may shape his or her world view and life goals in ways that must be understood and accounted for in practice. Recognition, connection, and rapport provide a foundation for building and sustaining trust-based working relationships.

Practice Tips

1. Learn the reason the person is seeking help. Consider whether the person's problem can be resolved in a single visit or brief intervention. Determine whether the person's problem is emergent/transient or serious/persistent. Determine whether the reported problem is a present threat to health or safety so that any need for crisis intervention or urgent response can be identified and provided.
2. If the person reports being in physical pain or emotional distress, ask about its nature, source, history, and impact on the person's life situation. Use the person's responses to form a theory that explains how the pain or distress came about, what causes it to continue, what has been done to alleviate it in the past, what has worked/not worked before, and who else may be helping the person relieve or solve this problem now.
3. In early interactions, discover the person's sense of identity, language, culture, values and preferences (especially any arising from race, sexual identity, and/or religious conviction), world view, social and economic supports, strengths and needs, present life challenges, and life-shaping experiences (e.g., adverse childhood experiences, deteriorating physical health, combat trauma, recent loss, addiction, emigration, poverty) that explain the person's situation and reasons for requesting help.
4. Recognize any barriers (arising from culture, language, gender, class, religious or political beliefs, life experiences, sexual orientation, work or family demands, or disability) that could thwart or limit the formation of positive connections with the person that would undermine acceptance and rapport building necessary for developing successful trust-based working relationships.
5. In summary, take active steps in establishing positive conditions for connecting with the person and building mutual respect and rapport with the person. Remember: recognition, connection, respect, and rapport are the building blocks of a trust-based working relationship and are performed concurrently by the practitioner when a person is entering services.

Tips for Strengthening Frontline Practice

Practice Area: Engagement & Commitment

Desired Outcomes of Practice

ENGAGEMENT & COMMITMENT. • Service providers are building and maintaining a trust-based working relationships with the person and the person's informal supporters to involve them in ongoing assessment, service planning, and wellness and recovery efforts. • Service providers are using effective outreach and ongoing engagement strategies to increase and sustain the person's participation in the service process and commitment to life changes that support wellness and recovery, consistent with the person's needs and preferences.

Key Concepts

Effective wellness and recovery services depend on ongoing working relationships between a person in need and the service providers who help meet those needs. Service providers make concerted efforts to reach out to the person, engage him/her meaningfully in all aspects of the service process, establish and maintain a trust-based working relationship that is consistent with the person's language and culture, coordinate efforts with other providers and secure and sustain the person's commitment to a change process. Engagement strategies build a mutually beneficial partnership in decision-making and life change efforts. The person's direct, ongoing, active involvement is used in assessment, planning interventions, selecting providers, monitoring and modifying service plans, and evaluating results.

Practice approaches that support effective relationship building are:

- Person-centered (organizes around the person's goals) • Wellness-oriented and outcome-driven (starts with the end in mind)
- Strengths-based (builds on the person's positive assets) • Builds readiness for change (uses motivational interviewing strategies)
- Solution-focused (moves from problems to solutions) • Fits the person's stages of change (starts where the person is ready)
- Need-responsive (recognizes and responds to needs) • Respects the person's identity, culture, aspirations, and preferences

In the absence of a trust-based working relationship with the service provider, the person is unlikely to reveal the underlying issues that explain the dynamic circumstances causing the problem that must be solved in order to achieve desired wellness and recovery outcomes.

Building Commitment to Positive Life Change. A major contribution of effective engagement is building and sustaining the person's commitment to personally chosen wellness and recovery outcomes and to the change process used to achieve these outcomes. In the absence of the person's commitment to life change, wellness and recovery outcomes are not likely to be achieved.

Practice Tips

1. Remember that building a relationship with a person involves recognizing the nature of the person's life situation and reasons for requesting help. Listening is key to learning, empathy, respect, and trust building. Finding and overcoming any barriers to personal connections are essential. Recognition and rapport provide a foundation for building and sustaining a trust-based working relationship.
2. Use a person-centered approach that puts the person's voice and choice at the center of the service process. Recognize and respond to the person's unmet needs related to wellness, well-being, and daily functioning. Use a solution-focused approach that is future-focused, goal-directed, and focuses on solutions, rather than on the problems that brought the person to seek help. Solution-focused practice aims to bring about the person's desired change in the least amount of time. Strengths-based practice approach emphasizes a person's self-determination and identifies and builds upon the person's strengths and assets to create sustainable resources for solutions.
3. Change-oriented approaches are especially useful in addressing lifestyle modification for risk reduction, disease prevention, long-term disease or disorder management, and addiction. Understanding a person's readiness to make change, appreciating barriers to change, and helping anticipate relapse can improve the person's satisfaction and lower practitioner frustration during the change process. A strengths-based, solution-focused change approach is useful in stimulating positive change and overcoming resistance.
4. Remember that engagement is an ongoing process that builds and sustains: 1) a mutually beneficial trust-based working relationship between the person and 2) a person's commitment to personally selected wellness and recovery outcomes and to the life change process.

Tips for Strengthening Frontline Practice

Practice Area: Screening, Detection, Prevention or Mitigation, Monitoring

Desired Outcomes of Practice

SCREENING, DETECTION, PREVENTION/MITIGATION, MONITORING. • Screening detects imminent threats to the person's health, safety, supports, or behavioral well-being upon entry and ongoing thereafter. • Responsive actions are provided in a timely and appropriate manner to prevent or mitigate any foreseeable harm to the person or others around the person arising from the detected threats of harm, risks of near-term life disruptions, or risks of poor well-being outcomes. • Follow-along monitoring tracks the person's situation to detect and respond to any future threats to well-being.

Key Concepts

A timely and appropriate response is provided for a person who is detected via screening processes or self-report as has having a threatening life situation, behavioral condition, disorder, or disease for which intervention or treatment is indicated, possibly with urgency.

Screening & Detection. Screenings are performed to identify a person who may have an undiagnosed health or behavioral condition or who may be at high risk of developing a condition requiring treatment, and to identify any imminent threat of harm from life partners/caregivers creating a major breakdown in essential supports. Screenings include labs to detect health problems as well as screening activities used to identify safety threats, behavioral concerns, and breakdowns in essential supports. Screenings may include metabolic syndrome factors, HIV, Hep-C, thyroid issues, depression, drug and alcohol use, suicide/homicide risks, trauma including domestic violence, and fall risk for the elderly. Detection involves identification of a specific health problem, safety threat, behavioral concern, or support breakdown that could cause harm:

- Safety / threats of harm at home, work, or school
- Adverse childhood experiences / complex trauma
- Emotional status / behavioral disorders
- Health status / physical well-being / illness
- A pattern of instability / trajectory of physical or emotional decline
- Self-endangerment / threats of harm to others
- Intellectual or developmental disability / TBI / learning problems
- Drug or alcohol use
- Unstable living situation or major break-down in key supports
- Diseases: diabetes, COPD, obesity, hypertension, seizures, thyroid issues, Hep-C, HIV, other

Prevention or Mitigation and Follow-Along Monitoring. Following detection of a threat of harm or an emergent condition, a response is an action taken to avert a safety threat, stop the progression of a disease, control a behavioral disorder, or to mitigate preventable injury or illness. The response must match the urgency, severity, and intensity of a detected problem, especially when the person is at imminent risk of harm (e.g., sudden death via suicide) or at high risk of a poor health outcome (e.g., a brittle diabetic adolescent who violates dietary restrictions). Prevention strategies keep harmful things from happening. Mitigation strategies reduce risks or minimize adverse effects of something that is already happening. Follow-along monitoring is used to track risk factors and mitigation strategies used to manage health, safety, behavioral, or support problems in order to provide knowledge for planning next step actions.

Practice Tips

1. Any problem requiring a crisis intervention or urgent response is addressed in a timely, appropriate, and sufficient manner so as to prevent unnecessary harm, pain, loss, or hardship for the person. Each response provided is commensurate with the urgency and severity of the presenting problem. Any response provided protects the person from preventable harm or mitigates the impact the problem would have likely had if not treated promptly and effectively.
2. Screenings of the person are performed upon admission and periodically thereafter. Practitioners continue to conduct screenings to detect safety, health, and behavioral risks as well as any emergent conditions or disorders as an ongoing assessment process. Based on results of screenings and self-reports by the person, any problems of significance (involving safety, health, or behavioral risks or other situations that could lead to instability or decline) are promptly detected.
3. The nature, significance, and history of any detected problem are defined and reported to any other practitioners or agencies that should be involved in providing an appropriate response to the person's need for prevention, protection, treatment, or care.
4. Results of initial and ongoing screenings are incorporated into the ongoing Bio-Psycho-Social Assessment and Case Formulation involving the person's situation. Any significant screening and detection results are used to develop necessary protective interventions and/or treatments to keep the person safe, physically and behaviorally healthy, and functioning effectively in daily life.

Tips for Strengthening Frontline Practice

Practice Area: Assessment & Case Formulation

Desired Outcomes of Practice

ASSESSMENT & CASE FORMULATION. • Ongoing formal and informal fact finding methods are used to develop and update a broad-based understanding of the person's bio-psycho-social situation, clinical history, strengths and assets, unmet needs, life challenges, stressors, and aspirations for wellness and recovery. • An evolving clinical case formulation (describing the person's clinically significant distress and impairment in functioning) is used to guide development of treatment plans informed by the person's life stage, culture, social context, and preferences.

Key Concepts

Ongoing assessment and clinical case formulation guide the course of action designed and used over time by service providers in collaboration with the person being served to help her/him meet wellness and recovery goals that have been selected. Assessment provides answers to practical and clinical questions [see the Tip Sheet on Organizing Questions] that are used to develop a functional, working understanding for the person from which treatment decisions are made. Based on the working understanding, a clinical case formulation is developed and updated as new understandings emerge.

Assessment & Understanding. As appropriate to the person's situation, a combination of clinical, functional, and informal assessment techniques are used to determine the strengths, needs, risks, underlying issues, and future goals of the person. Once gathered, the information is analyzed and synthesized to form a functional understanding and a bio-psycho-social based clinical case formulation used in developing a course of action with and for the person. Areas in which essential understandings are developed include:

- Earlier life traumas, losses, and disruptions
- Learning problems affecting school or work performance
- Subsistence challenges encountered in daily living
- Risks of harm, abuse, neglect, intimidation, or exploitation
- Traumatic brain injury and/or intellectual disabilities
- Court-ordered requirements/constraints/detention
- Recent life disruptions (e.g., eviction, bankruptcy)
- Dislocation due to natural disaster or changes in the local job market
- Co-occurring life challenges (cultural issues, mental illness, addiction, deafness, domestic violence)
- Significant physical health and/or behavioral health concerns
- Recent tragedy, trauma (including combat trauma), losses, victimization
- Problems of attachment, bonding, self-protective boundaries in relationships
- Recent life changes (e.g., new baby, job loss) requiring major adjustments
- Any significant screening and detection findings (health or safety risks)

Case Formulation and Clinical Reasoning. Understandings developed from ongoing assessments are used to create a clinical case formulation that guides service decisions and actions. Clinical reasoning is applied in moving from understanding to action: Any compelling urgency is addressed first. Practical solutions may precede clinical solutions in the course of action. Opportunities for early and repeated successes are identified and pursued. A pace of action that could confuse or overwhelm the person is avoided.

Practice Tips

1. The outcome of assessment is a functional understanding of the person's situation used to build a clinical case formulation that guides goal setting and intervention planning. Assessment is a continuous learning process that includes gathering and assembly of facts, information, and knowledge to develop a broad-based understanding of the person's situation used to support decision making. Remember that screening data, detection of threats to the person's well-being, results of prevention or mitigation strategies, follow along monitoring findings, and evaluation of results are used in the ongoing assessment process.
2. A clinical case formulation includes a clinical history and concise summary of the bio-psycho-social factors contributing to the present concern. It focuses on clinically significant distress and impairment in functioning experienced by the person. The case formulation considers the combination of predisposing, precipitating, perpetuating, protective, and predictive factors contributing to the condition of concern.
3. Practical reasoning and clinical judgment are used in making a reliable assessment of factors related to a person's disruption in daily functioning or role fulfillment.
4. Functional understandings and a clinical case formulation are used to guide development of a comprehensive treatment plan, including support plans where indicated, informed by the person's life stage, culture, social context, and preferences.

Tips for Strengthening Frontline Practice

Organizing Questions for Use in Assessment & Case Formulation

Organizing Questions in Clinical Reasoning

Presented below is a set of basic practical and clinical reasoning questions offered for use by practitioners, clinicians, and supervisors to guide practical and clinical reasoning in case practice. Answers to these questions can help focus the organization of assessment information and clinical case formulation as well as guide outcome and intervention planning. It is not meant to be an all-inclusive or exhaustive set of probes and thought organizers to cover every possibility. There may be other important matters in any case situation that are not addressed in this set of questions. Practitioners should remain alert to those situations.

1. **People Involved:** • Who are the people involved in supporting and serving this person? • How well are they engaged, involved, and committed to helping the person?
2. **Expectations and Voice & Choice:** • What outcomes of intervention are people expecting to be achieved? • The person? • The person's caregiver or key supporters? • The school or employer? • The medical provider? • The court? • Other service providers? • To what degree are the voices and choices of the person and the person's supporters influencing decisions about the person's needs and preferences in the service process?
3. **Causes & Contributors of Presenting Problems:** • What bio-psycho-social factors, life circumstances, and underlying issues explain the person's presenting problem(s), clinically significant distress, impairment in functioning, and currently unmet needs?
4. **Risk Factors:** • Based on history and tendencies, what things could go wrong in this person's life? • What must be done to avoid or prevent future harm, life disruption, pain, loss, or undue hardship?
5. **Functional Strengths & Assets:** • What are the person's functional strengths, aspirations for change, and life assets that can be built up to solve the problem(s) that brought the person into services?
6. **Critical Unmet Needs:** • What critical unmet needs would have to be fulfilled in order for the person to get better, do better, and stay better?
7. **Points of Consensus & Dispute:** • On what key matters do the people involved agree at this time? • What key matters, if any, may be in dispute by any of the persons involved? • What impact, if any, are unresolved disputes having on decision making about needs, risks, outcomes, interventions, or commitments to the change process?
8. **Necessary Changes:** • What things in the person's life would have to change in order for the person to achieve and maintain adequate well-being, have essential supports for living, function adequately in daily activities, and fulfill key life roles - as appropriate to life stage, capacities, and preferences?
9. **Essential Outcomes:** • What life conditions, when met, will show the person's problems are solved and critical needs are met (e.g., achieved adequate well-being, has essential supports for living, functions adequately in daily activities, and fulfills key life roles)?
10. **Key Opportunities for Rapid Successes:** • What near-term opportunities for getting early and repeated successes are available to strategically target intervention activities that could alter the case trajectory? • In what area is an early completion of a key outcome possible? • In what key areas is a readiness for change evident (based on the stages of change) in the person's present motivation? • How able is the person/family to make choices and self-direct? • How are such opportunities being used to advance efforts to achieve early, positive, and sustained changes for this person?
11. **Intervention Strategies:** • What combination and sequence of intervention strategies are likely to bring about desired life changes and meet the person's wellness or recovery goals? • How well does the pace and workload of interventions activities fit the person's tolerance for scheduling and acceptance of planned activities and ability to self-direct? • How well does the current rate of intervention activity avoid a pace and participation burden that would overwhelm or confuse the person and reduce motivation for ongoing participation and life change efforts?
12. **Intervention Requirements:** • Who will implement the planned intervention strategies and actions? • What will the persons implementing the intervention strategies have to know, believe, have, and do to be successful? • Who will train, support, and supervise the implementers to ensure that the required skills, knowledge, attitudes, coordination, resources, time availability, and commitment are present and used as planned?
13. **Results-Based Decisions:** • How will people know and decide: • Whether interventions are being delivered and are working as planned? • When interventions should be changed or stopped? • When life-change outcomes have been substantially achieved? • When the person's needs are met, key outcomes have been achieved, and intervention efforts can be safely and successfully reduced, transitioned, or concluded? • How thoroughly and consistently the understandings gained about implementation processes and results are being used to evaluate interventions and to adjust the assessment, case formulation, outcomes, and interventions used for this person?

Tips for Strengthening Frontline Practice

Practice Area: Wellness, Resiliency, Recovery Goals

Desired Outcomes of Practice

WELLNESS, RESILIENCY, RECOVERY GOALS. Planned life-change goals for the person: • Are based on understandings developed from current assessments and a clinical case formulation. • Define agreed upon life changes necessary for achieving and maintaining wellness, meeting essential needs, improving daily functioning, gaining greater independence, and supporting ongoing resiliency or recovery. • Are stated as the person's vision for wellness, resiliency, and/or recovery in the person's treatment plan. • Are measurable for tracking progress and determining attainment of outcomes.

Key Concepts

WELLNESS, RESILIENCY, AND RECOVERY GOALS define how all involved in the service process will know that the person is getting better, doing better and staying better in life. Planned goals and life change outcomes specify states of well-being (e.g., safety, health, or substance free lifestyle), functioning (e.g., competency or capacity), or support (e.g., shelter or income) that was absent or insufficient at the time the person entered the service system and that will be necessary for the person to gain and maintain success in life without ongoing assistance from the service system, or when the person is ready to transition from one level of care or living arrangement to another. The creation of a person's wellness and resiliency or recovery goals should be: 1) derived from current assessments and the clinical case formulation, 2) based on collaborative understandings of necessary life changes, and, where appropriate, 3) reflective of any court orders that require specific life changes.

Defining wellness and resiliency recovery goals creates a guiding view for services (working from outcomes to actions) that should precede the planning of intervention strategies and actions used to achieve outcomes. Having clear life outcomes enables the person and those helping the person to see both the next steps forward and the end-point on the horizon -- thus, providing a clear vision of the pathway to wellness and resiliency or recovery.

Practice Tips

1. Use person-centered, wellness/resiliency/recovery-oriented planning techniques to help the person identify and state what he/she expects to gain or achieve from services. Frame expectations as life-change goals using the person's own words. Make sure the goals created to guide service planning are based on the person's assessed needs, expressed aspirations for a better life, and socially-beneficial choices.
2. Consider the logical order in which life-change goals should be addressed. The practitioner should first plan to meet any compelling urgencies requiring immediate action to prevent harm (working from urgent to strategic). After any such urgencies are addressed, focus next on any life-change goals related to achieving well-being (e.g., safety, health, well-being) and goals related to supports for living (e.g., income, food, housing, health care). Once needs for well-being and supports for living are being met, the focus shifts to goals related to improving daily functioning and to fulfilling key life roles. This progression of meeting essential needs and strategic life changes should enable the person to achieve and maintain an adequate daily life situation and gain greater independence from the service system.
3. Discover opportunities available for making early and repeated progress. When selecting from among near-term goals and strategies, the practitioner should give priority to any ready opportunities for getting early and repeated successes and/or any important life outcome that could be easily and readily achieved. Early victories or rapid completions in life change efforts can increase satisfaction and motivation for the person and can have the effect of changing the trajectory of the case.
4. Construct goals that are **SMART**: Specific, Measurable, Achievable, Relevant, and Time-bound. Clear, relevant and achievable goals help in planning intervention strategies, in measuring of results, and in promoting the person's motivation and commitment to the change process. Avoid pitfalls in goal setting, such as: • Focusing on a narrow, immediate change rather than a long-term outcome; • Setting negative goals (focusing on stopping a bad behavior rather than focusing on the positive replacement behavior); • Focusing on too few things to solve the main problem being addressed; • Setting more goals than can be addressed at once; • Not setting an estimated completion time for the attainment of the goal; • Creating goals too vague to be measured or completed.
5. Use the person's life-change goals to guide the selection of intervention strategies used for their attainment. Identify goals for which the involvement of other practitioners or agencies will be involved, in or responsible for the helping the person achieve the desired outcomes. Use teamwork to develop consensus on goals (based on common purpose) and build unity of effort among providers in order to coordinate and integrate services for goal attainment.

Tips for Strengthening Frontline Practice

Practice Area: Teamwork/ Common Purpose & Unity of Effort

Desired Outcomes of Practice

TEAMWORK/COMMON PURPOSE & UNITY OF EFFORT. • Using a person-centered decision making process, the person's service providers and supporters are building and sustaining: • **Common purpose** by planning wellness/recovery goals and strategies with and for the person. • **Unity of effort** in service delivery by coordinating actions of the service providers and integrating services across providers, settings, time, and funding sources.

Key Concepts

Person-centered, resiliency- or recovery-oriented practices and self-directed care principles put the person's needs, aspirations, and choices at the center of the service provision efforts. A team-based, shared decision-making process helps the person create a vision for a better life based on aspirations for well-being, supports for living, and improved daily functioning and role fulfillment. Informal supporters and service providers join with the person to define wellness and recovery goals to be achieved along with related strategies for provision of supports and services. Because the efforts of many may be involved in helping the person, achieving common purpose and unity of effort are essential for success, and will create the "glue" that holds things together in practice for the benefit of the person receiving services.

Common Purpose. Common purpose is created when the person and service providers involved agree upon and commit to clear goals and a related course of action. An ongoing, person-centered/resiliency- or recovery-oriented, team-based, shared decision-making process may be used to achieve and maintain a CONSENSUS and COMMITMENT to a set of well-planned goals and related strategies which are essential for building common purpose.

Unity of Effort. Unity of effort is based on: (1) A common understanding of the person's situation; (2) A common vision for a better life; (3) Coordination of efforts to ensure coherency and continuity; (4) Common measures of progress and ability to change course, if necessary. Unity of effort is achieved and maintained via ongoing teamwork, coordination of actions among the person, providers and supporters, and integration of services across providers, settings, funding sources, and points in time.

Practice Tips

1. Remember that effective TEAMWORK and SERVICE COORDINATION help build common purpose and unity of effort in frontline practice. Effective teamwork involves having the right people working together with and for the person being served. The team should have the technical and cultural competence, the knowledge of the person, the authority to act on behalf of funding agencies and to commit resources, and the ability to flexibly assemble supports and resources in response to specific needs. Members of the team should have the time available to fulfill commitments made to the person.
2. The team assists in conducting person-centered planning activities and in providing assistance, support, and interventions after plans are made in order to meet important goals. Working together, team members support the person in identifying needs, setting goals, and planning strategies with related services that will enable the person and family to meet those goals. Effective, ongoing, collaborative problem solving is a key indicator of effective team functioning.
3. Leadership and coordination are necessary to: (1) form a person-centered team and facilitate teamwork; (2) plan, implement, monitor, modify, and evaluate services provided; (3) integrate strategies, activities, resources, and interventions agreed upon by the team; (4) measure and share results in order to change strategies that do not work and to determine progress; and (5) ensure a unified process involving a shared decision-making approach. While leading and coordinating may be appropriately discharged by a variety of team members, it is most effectively accomplished by a designated leader (e.g., a care coordinator) who prepares team members, convenes and organizes meetings, facilitates team decision-making processes, and follows up on commitments made. Individual(s) filling these roles should have strong facilitation skills, authority to act, and, as appropriate to role, clinical skills in assessing, planning, monitoring, and evaluation. In a case where several agencies and providers are involved, negotiation may be necessary to achieve and sustain a coordinated and effective service process. Leadership and coordination responsibilities can be shared with an empowered and capable service recipient in order to increase self-direction of care.
3. Team functioning and decision-making processes should be consistent with principles of person-centered care, resiliency- or recovery-oriented practice and, where possible self-directed care. Evidence of effective team functioning over time is demonstrated by the quality of relationships built, the commitments fulfilled, results achieved, the unity of effort shown by all members of the team, the focus and proper fit of services assembled for the person, the dependability of service system performance, and the connectedness of the person to critical resources necessary for achieving important life goals.

Tips for Strengthening Frontline Practice

Practice Area: Planning Intervention Strategies, Supports & Services

Desired Outcomes of Practice

PLANNING. • Meaningful, measurable, and achievable wellness/resiliency/recovery goals for the person are supported with well-reasoned, agreed-upon strategies, supports, and services planned for their attainment.

Key Concepts

Interventions consist of a combination and sequence of planned strategies, supports, and services which guide implementation toward life changes for a person leading to the attainment of wellness and recovery goals identified by the person and team. Intervention planning is an ongoing process throughout the life of the case, and planned interventions should be consistent with the person's aspirations for a better life.

Practice Tips

Planned intervention strategies, supports, and services related to a person's wellness and recovery goals may be developed in one or more the following areas where co-occurring needs are identified.

1. **Physical Wellness** - focuses on planning for achieving and maintaining the person's best attainable health status by managing any health concerns. The person may need assistance to access services necessary to manage chronic health conditions (e.g., seizures, COPD, diabetes, obesity, hypertension, thyroid issues, Hep-C, HIV/ AIDS, etc.) that require involvement of practitioners from primary health care and other health care specialties.
2. **Mental Health Resiliency or Recovery** - focuses on reducing and managing psychiatric symptoms that impair daily functioning. Use of psychiatric medication in combination with counseling and supportive services are common intervention strategies used to reduce symptoms and build coping skills.
3. **Addiction Recovery** - addresses various aspects of substance use, relapse prevention and addiction recovery. Careful identification of co-occurring issues is essential for effective planning.
4. **Trauma Recovery** - addresses the lingering adverse effects of complex trauma. Trauma recovery may involve processing trauma-related memories and feelings, discharging pent-up "fight-or-flight" energy, learning how to regulate strong emotions via new coping skills, and rebuilding the ability to trust other people. Trauma recovery is a process that may involve safety planning, cognitive behavioral strategies, social supports, and medication.
5. **Safety from Harm** - applies to planning strategies for keeping persons safe, including no contact orders, and safety plans, crisis responses, and/or safety supports. A behavioral crisis is one in which the person presents behaviors that put himself or others at risk of harm. A health crisis is one in which a chronic health condition suddenly becomes acute, putting the person's life at risk unless immediate medical care is provided. A safety crisis is a situation in which another person through intention and action or inaction puts the focus person at risk of harm, injury, or death.
6. **Income & Basic Necessities** - includes strategies for work, earned income, securing and managing benefits, obtaining housing, food stamps, housing, income maintenance, health care, medicine, or child care. Securing such supports, when they are lacking, may be necessary for the person's well-being, daily living, and for some adults, maintaining family functioning.
7. **Functional Life Skills Development** - involves skill-specific training and direct support to acquire, apply, and sustain functional life skills in daily living situations. Functional life skills include such elements as activities of daily living (ADLs), managing health issues and medication, and managing behavioral issues via effective coping skills. Functional skills are needed for successful everyday living and fulfilling important life roles, such as parenting dependent children or adults in the person's care.
8. **Education or Work** - includes education, career development, volunteering as a productive activity, and work, either competitive or supported.
9. **Community Integration** - or most adults, recovery includes regaining degrees of community integration, which involves making decisions about choice of social supports and life activities. Experiencing life activities in mainstream settings outside of an institution or provider agency that involve having interactions with non-disabled persons who are engaged in the same activities may be an important part of the plan (e.g., attending a ball game, eating in a cafe, riding a public bus, voting in an election).

Tips for Strengthening Frontline Practice

Practice Area: Implementing Strategies, Supports & Services

Desired Outcomes of Practice

IMPLEMENTING. Planned strategies, supports, and services are delivered in a manner sufficient to help the person make adequate progress toward meeting planned goals. • The combination of supports and services fits the person's situation so as to maximize benefits and minimize any conflicting strategies or inconveniences.

Key Concepts

Implementation provides for the timely, competent, and consistent delivery of planned interventions (strategies, supports, services) in ways that are consistent with the goals set by and for the person, convenient for the person and family, and sufficient in power and effectiveness to bring about the life changes that lead to goal attainment. Implementation follows and flows from the strategies, supports, and services specified in person's treatment and support plans.

Practice Tips

Implementation of intervention strategies, supports, and services may occur in one or more the following areas.

1. **Physical Wellness** - focuses on achieving and maintaining the person's best attainable health status. This includes managing any health concerns by helping the person access services necessary to manage chronic health conditions (e.g., seizures, COPD, diabetes, obesity, thyroid issues, hypertension, Hep-C, HIV/AIDS, etc.) that require involvement of practitioners from primary health care and other health care specialties in the ongoing monitoring and coordination of multiple treatment modalities for the person. Strategies in this area involve not only the health care practitioners but also those supportive persons (e.g., the person, caregiver, health educator, care coordinator, and/or community support worker) having important roles in health education, transportation, medication administration, and meeting other daily health maintenance requirements.
2. **Mental Health Resiliency or Recovery** - focuses on reducing and managing psychiatric symptoms that impair daily functioning. Use of psychiatric medication in combination with counseling and supportive services may be interventions used to reduce symptoms and build coping skills.
3. **Addiction Recovery** - addresses various aspects of substance use dependence treatment, relapse prevention, and addiction recovery. An adult having a co-occurring disorder (depression and opiate addiction) could have several strategies used for achieving and maintaining sobriety and reduction in symptoms of depression. Use of psychiatric medications to treat depression and Suboxone to treat opiate addiction are common dual intervention strategies to achieve key outcomes for sobriety and mood stability.
4. **Trauma Recovery** - addresses the lingering adverse effects of complex trauma. Trauma recovery may involve processing trauma-related memories and feelings, discharging pent-up "fight-or-flight" energy, learning how to regulate strong emotions, and rebuilding the ability to trust other people. Trauma recovery is a process that may involve safety planning, cognitive behavioral strategies, social supports, and medication.
5. **Safety from Harm** - applies to strategies for keeping persons safe, including no contact orders, and safety plans, crisis responses, and/or safety supports. A behavioral crisis is one in which the person presents behaviors that put himself or others at risk of harm. A health crisis is one in which a chronic health condition suddenly becomes acute, putting the person's life at risk unless immediate medical care is provided. A safety crisis is a situation in which another person through intention and action or inaction puts the focus person at risk of injury or death.
6. **Income & Basic Necessities** - includes strategies for work, earned income, securing and managing benefits, obtaining housing, food stamps, housing, income maintenance, health care, medicine, or child care. Securing such supports, when they are lacking, may be necessary for the person's well-being, daily living, and for some adults, maintaining family functioning.
7. **Functional Life Skills Development** - involves skill-specific training and direct support to acquire, apply, and sustain functional life skills in daily living situations. Functional life skills include activities of daily living (ADLs). Functional skills are needed for successful everyday living and fulfilling important life roles, such as parenting dependent children or adults in the person's care.
8. **Education or Work** - includes education, career development, volunteering as a productive activity, and work, either competitive or supported.
9. **Community Integration** - for some adults, recovery includes regaining degrees of community integration. Community integration involves making decisions about choice of life activities and experiencing life activities in mainstream settings as do other adults who do not have disabilities. Aspects of community integration include engaging in normal life activities outside of an institution or provider agency that involve having interactions with non-disabled persons who are engaged in the same activities (e.g., attending a ball game, eating in a cafe, riding a public bus, voting in an election).

Tips for Strengthening Frontline Practice

Practice Area: Situation Tracking, Plan Adjustment, Transitioning

Desired Outcomes of Practice

SITUATION TRACKING, PLAN ADJUSTMENT, TRANSITIONING. • Situational awareness is sustained by tracking the person's life situation, changing circumstances, service process, progress, and goal attainment. • Plans are kept relevant and effective by identifying and resolving service problems, overcoming barriers, and replacing failed strategies. • Seamless and successful transitions are achieved by ensuring continuity of care across settings and providers as well as supporting the person's successful post-change life adjustments in a new setting or situation.

Key Concepts

Sustaining Situational Awareness. Ongoing situational tracking is used to: 1) monitor the person's status, service process, and progress; 2) identify emergent needs and problems; and 3) plan adjustments in services to keep strategies relevant and effective. Measuring progress toward wellness/recovery goals is an essential part of tracking and is accomplished by tracking the direction and pace of life changes made and proximity to the attainment of goals.

Keeping Plans Relevant and Effective. Effective tracking and adjustment build results-based accountability into case practice. Intervention strategies, supports, and/or services are tracked and are modified when goals are met, strategies are determined to be ineffective, new preferences or dissatisfactions with existing strategies or services are expressed, and/or new needs or circumstances arise. Working together, the care coordinator, team members, and the person play a central role in tracking and adjusting intervention strategies, services, and supports by applying knowledge gained through ongoing assessments, monitoring, and periodic evaluations.

Achieving Successful Transitions & Continuity of Care. The term *care transition* refers to movement of a person between care locations, providers, or different levels of care within the same location as the person's condition and care needs change and is a subpart of the broader concept of care coordination. Care coordination involves numerous providers who are dependent upon each other to carry out disparate activities in a person's care. In order to accomplish this in a coordinated way, each provider needs adequate knowledge about their own and others' roles and available resources, and relies on exchange of information in order to gain this knowledge. An effective discharge and care transition ensures the person and caregiver are able to understand and use essential health information they have been given and are able to move seamlessly from one service setting or provider to another. It requires the carefully planned transfer of clinical responsibility with the information needed to discharge that responsibility safely and effectively. The process requires: 1) essential clinical information at transition or discharge, 2) the opportunity to ask questions, 3) a seamless clinical envelope with a responsible clinician ("a seamless clinical envelope" means that the person is always enclosed in and surrounded by the care system, there are no lapses in care, and at all times in the transition there is an identifiable knowledgeable available clinician who is responsible for managing the person's clinical issues), 4) and logistical and management support for person and caregiver with the person's status and well-being being monitored across life adjustments throughout the transition process. Care and support are provided during the change process to ensure the person is managing the stress of the change, is stable and is functioning successfully in the new setting with adequate supports provided for ongoing success.

Practice Tips

1. Sustaining Situational Awareness. Maintaining adequate awareness and understanding of the person's status, service process, and progress are essential for effective care coordination. The identified care coordinator has a lead responsibility for sustaining situational awareness while working collaboratively with the person and others involved in the person's care. Tracking progress is accomplished by: • Monitoring the person's status, service process, and progress and by • Identifying emergent needs and problems.
2. Keeping Plans Relevant. Building upon situational awareness, the care coordinator or case manager and clinician have lead responsibilities for working collaboratively with the person and his/her team to update assessments, advance the clinical case formulation, modify goals, and refine risk management and intervention plans for provision of supports and services. Keeping plans relevant is accomplished by: • Facilitating team decision-making about next step actions and by • Planning adjustments in strategies, supports, and services to keep plans relevant and effective.
3. Achieving Successful Transitions and Continuity of Care. The person's care coordinator, clinician, and care team play a central role in planning and facilitating transition activities (including those involving discharge from one place of care and movement to another) to ensure continuity of care during a seamless transition to and successful life adjustment in a different care location. The lead clinician and care coordinator: • Provide essential clinical information at discharge and during the transition process; • Answer questions posed by the person or caregiver; • Provide wraparound care and support to prevent any lapses or breakdowns in care during and after the transition; • Provide logistical and management support for the person and caregiver during the transition; • Provide follow-along support after the transition to ensure that the person has continuity of care and achieves a successful life adjustment with sufficient ongoing supports to maintain well-being and achieve planned goals.

Tips for Strengthening Frontline Practice

Clinical Technique: Solution Focused Brief Therapy

Desired Outcomes of Practice

SOLUTION FOCUSED BRIEF THERAPY: • The person's concerns and reasons for requesting help are clarified. • The person's aspirations and vision for a preferred future are identified. • The person develops and demonstrates motivation and confidence in finding solutions. • The person's strengths and past successes are used to build solutions. • The person is taking small steps in the right direction toward a preferred future.

Key Concepts

Solution Focused Brief Therapy (SFBT) is a recognized evidence-based practice that focuses on a person's strengths and previous successes rather than failings and problems and is provided via conversations that stimulate and support positive life change for a person receiving services. These conversations are centered on the person's concerns; who and what are important to the person; a vision of a preferred future; the person's exceptions, strengths, and resources related to the vision; scaling of the person's motivation level and confidence in finding solutions; and, ongoing scaling of the person's progress toward reaching the desired future. The goal is helping a person rapidly find a solution to a his/her identified and resolvable life problem.

Basic concepts of SFBT are:

- It is focused on the person's desired future, not the past.
- The person and provider create solutions based on what has worked in the past.
- It assumes that solution behaviors already exist and encourages the person to increase the frequency of these useful behaviors.
- It places responsibility for change on the person.
- It asserts that small steps in the right direction lead to larger changes.

Solution-Focused Questions

Solution-focused questions about the topics of conversation are used to connect to and build on the concerns and aspirations expressed by the person. Examples of solution-focused questions include:

- Given the issue or problems you are faced with, what are you hoping we can achieve together?
- How would you like your life to change in regard to the issues we have been discussing?
- Are there things you have tried already to solve this problem?
- What are some things you have already accomplished that you are pleased with?
- What types of support do you have from family/community/resources?
- What personal traits, skills, and talents have helped you in the past?
- What personal qualities are helping you get through these difficult times right now?
- How is it you found the strength and wisdom to come here for help?
- What do you suppose you do or have done so that the problem isn't any worse?
- What have you tried in the past when confronted with these types of problems?
- Would this type of solution help with your situation now?
- When you have achieved your goal, what are some things you will experience that will let you know that your goal has been accomplished?
- If your problem suddenly went away, what would be the first thing you would notice about yourself (how would be feeling, thinking, doing)?
- How would those around you know that this big change had occurred?

Tips for Strengthening Frontline Practice

Clinical Technique: Motivational Interviewing

Desired Outcomes of Practice

MOTIVATIONAL INTERVIEWING: • The person is assisted to become increasingly aware of the potential problems caused, consequences experienced, and risks faced as a result of a particular behavior, is eventually able to envision a better future and becomes increasingly motivated to achieve it.

Key Concepts: Motivational Interviewing

Motivational interviewing is a practice that achieves success by facilitating and engaging intrinsic motivation within the person in order to change behavior. Motivational interviewing is a person-centered style of engagement for eliciting behavior change by helping a person to explore and resolve ambivalence about the desired change. It is non-judgmental, non-confrontational, non-adversarial and is based upon the concept of risk-reduction. Motivational interviewing recognizes and accepts the fact that persons who need to make behavior changes enter counseling at different levels of awareness and readiness to change.

In order for a practitioner to be successful at motivational interviewing, five basic skills will be necessary: 1) The ability to establish a therapeutic relationship through genuine empathy, warmth and respectful treatment. 2) The capacity for reflective listening. 3) The ability to ask open-ended questions. 4) The ability to provide affirmations. 5) The ability to periodically provide clarifying summary statements to the person.

The motivational practice attempts to increase the person's awareness of the potential problems caused, consequences experienced, and risks faced as a result of the behavior in question as well as helping the person to envision what might be gained through change.

The four general principles are:

1. **Express Empathy.** Empathy involves seeing the world through the person's eyes and sharing in the person's experiences. The practitioner's accurate understanding of the person's experience, which is demonstrated by reflective comments and summary understanding statements, can encourage change.
2. **Develop Discrepancy.** Practitioners help persons appreciate the value of change by exploring the discrepancy between how the person wants his or her life to be versus how it is currently (or between their deeply-held values and their day-to-day behavior). Practitioners assist the person to explore and resolve her/his ambivalence as well as grieving the need to change.
3. **Roll with Resistance.** The practitioner does not fight a person's resistance, but "rolls with it." Statements demonstrating resistance are not challenged because they are an indicator that the practitioner has "lost" the person. Instead the practitioner uses the person's "momentum" to refocus and further explore his or her views. The practitioner may need to apologize and repair the relationship if he/she has been "lecturing" the person. Using this approach, resistance tends to be decreased rather than increased, as persons are reassured that they are in charge of their own lives. Motivational interviewing encourages persons to develop their own solutions to the problems that they themselves have defined with the practitioner functioning as a partner in the process as both of them look toward the goal together.
4. **Support Self-Efficacy.** The practitioner explicitly embraces the person's autonomy (even when persons choose to not change) and helps the person move toward change successfully and with confidence. As persons are held responsible for choosing and carrying out actions to change, practitioners focus their efforts on helping people stay motivated, and supporting their sense of self-efficacy by celebrating small steps and any effort toward change.

Key Points on Motivational Interviewing are:

- Motivation to change is elicited from the person and is not imposed from outside forces.
- The practitioner's job is to help the person discover his/her own path.
- Direct persuasion is not an effective method for resolving ambivalence.
- The practitioner is generally quiet and elicits information from the person who does most of the talking.
- The practitioner helps the person to examine and resolve ambivalence and to grieve the need to change.
- The therapeutic relationship is viewed as a partnership.

APPENDIX K

Interdisciplinary Teaming in Behavioral Healthcare

Definition of Teaming

Teaming is an ongoing group-based process used for case-level learning, reasoning, and decision making. In teaming, appropriate people join together to help achieve agreed upon wellness and recovery goals for a person receiving services.

The Six-Cs of Teaming

Teaming involves ongoing group-based processes that build and sustain: *[The Six-Cs of Teaming]*

- Communication – ongoing exchange of essential information among team members (supporting an individual receiving services) that is necessary for achieving and maintaining situational awareness in case practice.
- Coordination – organization of information, strategies, resources, and participants into complex arrangements enabling team members to: work together, identify a person's needs and goals, select strategies for a course of action, assign responsibilities for action, contribute and manage resources, and track and adjust strategies and supports to achieve goals.
- Collaboration – operation of shared decision-making processes used to identify needs, set goals, formulate courses of action, implement supports and services, evaluate results.
- Consensus – negotiated agreements necessary for achieving common purpose and unity of effort among members of a person's team.
- Commitment – promises made by members of a person's team to help achieve a set of goals, related courses of action, and resources supplied by members to the same.
- Contribution – provision of time, funds, or other resources committed by the person and members of the person's team necessary to support ongoing teaming and to implement the course of action agreed to by the person and person's team members.

These six elements of teaming may be performed by using a variety of media [with the person's knowledge and consent]; e.g., texting members to update them on an emergent event; using email communications to ask or answer questions; sharing assessments, plans, and reports; conducting conference calls via telephone; using skype conferences; and, conducting face-to-face meetings with the person present when key decisions are made.

Core Concepts of Teaming

Shared Decision-Making.

Person-centered, wellness- and recovery-oriented practices, and self-directed care principles put the person's needs, aspirations, and choices at the center of service provision efforts. A team-driven, shared decision-making process helps the person create a vision for a better life based on aspirations for well-being, supports for living, improved daily functioning, and role fulfillment. Informal supporters and service providers join with the person to define wellness and recovery goals to be achieved along with related strategies for provision of supports and services. Because the efforts of many participants may be applied in helping the person, achieving *common purpose* and *unity of effort* are essential for success, creating the organizational *glue* that holds things together in practice for the benefit of the person receiving services. Teaming is most useful in complex case-practice situations.

Common Purpose.

Common purpose is created when the person and service providers involved agree upon and commit to clear goals and plan a related course of action supported with resources necessary for effective implementation. An ongoing, person-centered, shared decision-making process may be used to achieve consensus and maintain commitment to a set of well-planned goals and related strategies based on a strong sense of common purpose that drives the planned course of action.

Unity of Effort.

Unity of effort is based on achieving and maintaining:

- A common understanding of the person's situation;
- A common vision for a better life experienced by the person served;
- Coordination of efforts to ensure coherency and continuity;
- Common measures of progress and ability to change course as necessary.

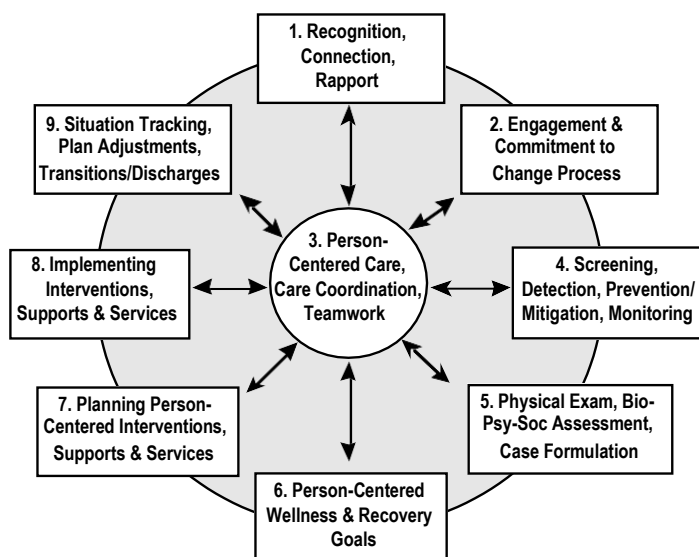

Unity of effort is achieved and maintained via ongoing teamwork, coordination of actions among participants, and integration of services across providers, settings, funding sources, and points in time.

Teaming is a Central Practice Function

Core practice functions are essential processes used in case practice to identify problems and unmet needs, to plan strategies and services used to solve complex problems and meet needs, and to ensure effective delivery of strategies and services in order to get desired results. The practice wheel shown below illustrates a combination and sequence of processes used in effective case practice to plan and

provide need-responsive services. [A separate tip sheet booklet explains the practice wheel functions shown below.]

Practice Wheel: Functions in Integrated Care Practice

Practice Functions May Occur Interactively, Concurrently, and Progressively

Core practice functions include engagement, assessment and case formulation, planning goals and strategies, implementation, tracking, adjustment, and teaming. Teaming (see function 3 in the display above) provides the central learning, decision-making, and service integrating elements that weave all of practice functions together into a coherent effort for helping a person served meet needs and achieve life goals. Teaming and care coordination are logically interrelated elements.

Considerations for Teaming

Teaming Supports Shared Decision Making.

Fast moving case-level service situations in behavioral healthcare require people who know how to team, people who have the skills and flexibility to act in moments of potential collaboration when and where they appear. They must have the ability and authority to act quickly, move on, and be ready for the next such moments. Teaming relies upon old-fashioned teamwork skills such as recognizing opportunities, clarifying interdependence, building trust, and figuring out how to communicate, coordinate, and collaborate in case practice situations. There may be little time to build a foundation of familiarity through the careful sharing of personal history and prior experience or the development of shared practice experiences through working together. Instead, people must develop and use new capabilities for sharing crucial knowledge quickly. They learn to ask questions clearly, quickly, and

frequently. They act on what they learn. They make adjustments through which different skills and knowledge are woven together into timely strategies, supports, and services for the people they serve.

Teaming is an Engine for Case-Level Learning and Action.

Teaming is an engine of case-level learning and action in providing social and behavioral health services to persons having complex needs. Teaming and collaboration refer to the abilities to cooperate as a member of a successful action-focused group, to interact smoothly with others involved, to share information effectively, and to work together with one or more people to achieve a goal. Effective teams are those with clear goals, well-designed tasks that are conducive to teamwork, team members with the right skills and experiences for the task, adequate resources and time to get the job done, and access to any needed coaching and technical support.

Teaming is a Process, Not an Event.

Teaming is an ongoing problem-solving process, not a discrete event - such as holding a meeting. It is teamwork on the fly. Teaming is a dynamic activity, not a static group or structure. It is largely determined by the mindset and practices of teamwork. Teaming involves coordinating and collaborating without a prescribed or rigid team structure that would become burdensome or self-limiting over time.

Teaming Should Be Person-Centered.

From a “person-centered” point of view, case-level teaming happens only when the person whose needs and services are being discussed is actually present at the team meeting. Any meeting at which the person is absent when their needs and services are discussed is an *agency staffing*.

Team Formation: Effective Teaming Requires the Right People.

Effective case-level teamwork involves having the right people working together with and for the person being served. The team should have the technical and cultural competence, the knowledge of the person, the authority to act on behalf of funding agencies necessary to commit resources, and the ability to flexibly assemble supports and resources in response to specific needs. Members of the team should have the time available to fulfill commitments made to the person.

Team Functioning: Effective Teaming Supports Ongoing Collaborative Problem Solving.

Successful collaborative problem solving is a key indicator of effective team functioning. Teaming is used for:

- Understanding a person’s situation (e.g., unmet needs, urgent problems, aspirations, life goals, support system) and what would have to change in order for the person to get better, do better, and stay better;

- Planning a course of action (i.e., strategies, supports, and services) for meeting the person's needs and goals;
- Solving complex problems encountered that may thwart life-change efforts and,
- Determining when needs are met, goals are achieved, and when services should be changed or concluded.

Team functioning is evaluated on the basis of the actual results achieved, rather than evaluated based on the good intentions of those involved or compliance with funding requirements.

Team Coordination: Effective Teaming Requires Leadership.

Leadership and coordination are necessary to:

- Form and convene a person-centered team and facilitate teamwork for a person receiving services;
- Plan, implement, monitor, modify, and evaluate services provided;
- Integrate strategies, activities, resources, and interventions agreed upon by the team;
- Measure and share results to determine progress and change strategies that do not work;
- Ensure a unified process involving a shared decision-making approach.

While leading and coordinating may be appropriately discharged by a variety of team members, it is most effectively accomplished by a designated and qualified leader (e.g., a care coordinator) who prepares team members, convenes and organizes meetings, facilitates team decision-making processes, and follows up on commitments made. Individual(s) filling these roles should have strong facilitation and negotiation skills, authority to convene teams and act on team decisions, and, as appropriate to role, clinical skills in assessing, planning, monitoring, and evaluation. In a case where several agencies and providers are involved, use of negotiation skills may be necessary to achieve and sustain a coordinated and effective service process. Leadership and coordination responsibilities can be shared with an empowered and capable service recipient in order to increase self-direction of care.

Effective Team Meetings Require Preparation, Facilitation, and Follow-Up.

Preparation: A team meeting may be used when making decisions that could alter a person's life or make a major change in service arrangements. Basic considerations for team meeting preparation include making sure that the:

1. Person and other participants understand the purposes of the meeting and the issues to be addressed sufficiently prior to the meeting to allow time for participants to organize thoughts and materials necessary.
2. Participants are ready, able, and available for team participation.
3. The right people are invited to the meeting:
 - a. People necessary for the major decisions to be made.

- b. People invited by the person for their own support.
 - c. People invited by the agency for service provision.
4. Participants know the purpose of the meeting and how to contribute in a positive way:
 - a. Come prepared and ready for decision making.
 - b. Speak to their concerns in constructive ways.
 - c. Listen with respect to others' concerns.
 - d. Recognize and build on the person's strengths and needs.
 - e. Share information, ideas, and resources.
 - f. Keep personal and confidential information private.
 5. Participants know what to bring to be prepared as well as when and where to meet.
 6. Logistical arrangements are made:
 - a. Meeting place and time should be mutually convenient for the person and other participants.
 - b. Meeting place should be conducive for private and confidential conversations.
 - c. Refreshments and restrooms should be available for participant comfort.
 - d. The agenda should include the person's statement to begin or end the meeting.
 7. The facilitator is prepared to accomplish the primary purposes of the meeting.
 8. The facilitator and agency staff are prepared to follow-up on decisions made and on next step plans.

Making important decisions and the related next step plans for implementing those decisions should be the basis for a team meeting agenda.

Facilitation. Team meetings are facilitated by a person who has completed an approved meeting facilitator training program and who is competent to facilitate meetings that focus on wellness and recovery. Any relevant cultural issues of the person are recognized and accommodated before, during, and after the meeting. A qualified facilitator:

1. Convenes the meeting, defines the goals and ground rules of the meeting, introduces participants and their roles, defines decisions to be made and the possible range of actions to follow the decisions.
2. Uses consensus-building decision-making techniques, handles any conflict as it surfaces, selects appropriate idea-building processes, solicits all view-points, clarifies options, refocuses as necessary to stay on task and on time, monitors and manages the flow of discussion to ensure that all are heard and no one dominates, brings discussions to closure with decisions made, and moves on to next steps, assignments, and commitments. This is done by:
 - a. Sharing inspiring visions to guide decisions and plans.
 - b. Focusing on results, processes, and relationships.

- c. Designing pathways to action for realizing opportunities, building capacities, and solving problems.
 - d. Seeking maximum, appropriate involvement in decisions.
 - e. Facilitating the group to build agreements and meet challenges. [What could go wrong with this plan?]
 - f. Coaching others to do their best.
 - g. Confronting problems honestly and respectfully.
 - h. Managing power and control issues that arise.
 - i. Balancing person-centered practice with any court-ordered requirements.
 - j. Celebrating successes and accomplishments.
3. Builds an understanding of assessment results, the person's aspirations and challenges, court requirements, and programmatic or funding requirements:
 - a. The person's story, strengths and needs, risks, barriers to change, and desires to improve.
 - b. Requirements for behavior change by external sources -- the court, school, or family.
 - c. Changes the person must make plus their potential, motivation, and progress as it is being made (prognosis).
 4. Summarizes decisions, clarifies goals, and secures commitments.
 5. Sets goals for change, selects change strategies, plans interventions and support with the person and the person's supporters.
 6. Secures commitments from participants for plans made.

Service Planning and Follow-Up. Case-level team meetings serve as vehicle for service planning, coordination, communication, and accountability. The person's team develops, monitors, and evaluates an individualized, strengths-based, needs-driven service plan that responds to the person's strengths, needs, goals, and preferences identified in the assessment. Via the planning process, the team may help the person develop and use a network of informal supports that can help sustain the person over time. The person's team develops, monitors, and evaluates any individualized child service plans for a child or youth with special needs.

Challenges that May Thwart or Disrupt Effective Teaming

A powerful and continuing set of factors presently operate in state services that effectively prevent or discourage effective teaming. Among these factors are:

- Service siloes (i.e., programmatic structures) created by state and provider agencies that lack boundary-spanning authority for use of cross-agency service coordinators to support teaming for persons receiving services from multiple programs and funding sources;

- Funding constraints that limit reimbursements for team member participation;
- Need for qualified team facilitators having the skills necessary for effective team preparation, facilitation, and follow-up;
- Care coordinators lacking the authority to convene and facilitate teams as well as lack of sufficient time to facilitate teaming activities due to excessive caseload assigned.
- Lack of role definitions (concerning who does and pays what) and support for team members from multiple agencies serving the same person.
- Concerns about personal, professional, and agency liability for shared information and group-based decisions in a litigious service environment.
- Differences in organizational cultures and languages used in multi-disciplinary settings and teaming situations may lead to confusion and conflict in teaming situations.
- Perceived power differentials between potential team members (e.g., physician, community support coordinator, peer support provider) and their time availabilities for teaming processes seen as disruptive to teaming.

These are persistent factors that undermine local agency efforts to provide effective teaming for persons having complex service needs.

APPENDIX L

Minimum Standards for Family Team Decision Making

Introduction

Family Team Decision Making (FTDM) is both a philosophy and practice strategy for delivering child welfare services. The Department of Human Services [DHS] child welfare focus is on serving families with children at serious risk of harm from abuse and neglect. Building teams at the time of crisis to support families where there is a risk of serious harm to the child has been identified as a means to address the factors that threaten the child's safety, establish permanency for the child, and promote well being – central expectations in the provision of child welfare services.

FTDM can be used to enhance the core casework functions of family engagement, assessment, service planning, monitoring and coordination. When properly applied, FTDM supports a trust-based relationship, facilitates family engagement, and sustains the family's interest and involvement in a change process. Within the context of practice, family team meetings allow for regular monitoring of the case plan, ongoing evaluation of what is working and what is not working so that intervention strategies can be changed or modified as circumstances change.

FTDM promotes unity of effort and provides an opportunity for all helping professionals to develop a shared understanding of the family's situation – which are critical elements in attaining positive results. FTDM should be a proportional response to the needs of the child and family that is coordinated across systems involved with the family. DHS should join with other professionals in the community who may already be conducting good family meetings.

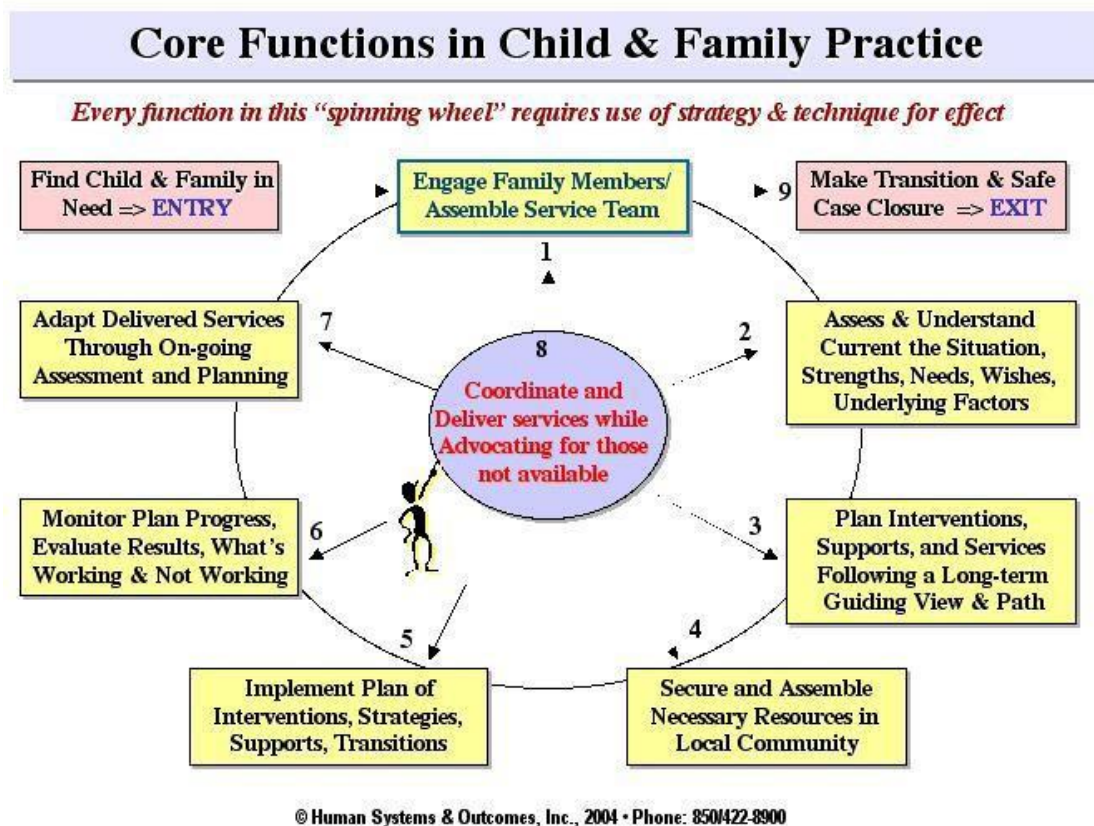

In order to achieve positive results associated with Family Team Decision Making, DHS is developing this set of standards to be used for Family Team Decision Making. Implementation will phase in this practice with a segment of cases with the goal of offering every family the opportunity to participate in family team decision-making. Iowa has developed policy that

allows flexibility in the practice of family team decision-making. As a result, a rich variety of family team meeting models are being utilized.

Both the *Better Results for Kids* redesign and the *CFSR PIP* place an emphasis on family team meetings as a critical practice change strategy.

Context for Family Team Meetings

It is important to recognize that FTDM is not a linear process of engagement, assessment, planning, and implementation. Rather it is a cyclical and dynamic process, which should grow and change over the life of a case. The following graphic defines typical case activities that are expected components of front-line practice.

Each core function is supported in the family team decision making process. In conducting a family team meeting:

- the family is further engaged [Step 1] through the facilitation of a meeting where the family's opinions are respectfully considered and their natural support system is included;
- the family team which includes informal as well as formal support persons provide further assessment and understanding [Step 2] of the family and their circumstances as strengths, needs, and underlying factors are considered and discussed;
- as the family plan [Steps 3, 4 & 5] is developed by the team, interventions, supports, and services are planned, resources are considered, and implementation of the plan begins;
- as the family team is reconvened to monitor progress [[Step 6], further assessment of what's working or not working is conducted, and services are adapted or changed; [Step 7] or, when planning for transition and safe case closure [Step 9].

Values and beliefs that help guide family teams include:

- Families have strengths and protective capacities.
- Families are experts on themselves and their situation.
- Families deserve to be treated with dignity and respect.
- Families can make well-informed decisions about keeping their children safe when they are supported in doing so.
- Families involved in decision-making and case planning are likely to have better outcomes than families who have decisions made for them.
- Families and friends can provide love and caring in a way that no formal helping system can.
- Families are capable of change. Most people are able to find solutions within themselves, especially when they are helped in a caring way to find that solution.
- A family team is more capable of high-quality decision-making than an individual caseworker acting alone.
- Solutions generated by the family within a team meeting are more likely to succeed because these solutions respond to the family's unique strengths, needs, and preferences.
- Cultural competence is key to understanding the family and the choices they make about change.

The following minimum standards are intended to guide daily practice in the use of FTDM.

FAMILY TEAM DECISION MAKING STANDARDS

Standard 1. Careful preparation of all participants is required for successful family team decision-making.

The initial phase of FTDM prepares the family to understand their role and to participate as decision makers in the process. Professionals and other team members should also be provided with an orientation to clarify their role and help them make a positive contribution.

The preparation phase can be used to initiate engagement and assessment activities and establish a climate of safety for the family. It is important that all participants are prepared for the family team meeting, agree to what will be accomplished, and understand the purpose of the meeting.

Successful preparation includes helping participants

- Set a positive, honest tone with a focus on strengths as well as needs
- Plan how they can manage emotions positively and contribute to the team

Standard 2. The Family is engaged throughout the family team decision-making process.

Family engagement is the ongoing process of developing and maintaining a mutually beneficial, trust-based relationship that empowers and respects the family and sustains their interest and participation in a necessary and time-limited change process. Diligent effort is made to join with the family and the family's natural supports to insure that needs are met and child safety and well-being are assured. Successful and productive relationships with families are earned over time through repeated, positive contacts that develop trust.

Successful family engagement strategies include the following:

- Approach the family from a position of respect, cooperation, and shared decision making.

- Engage the family around a shared concern for the safety of the child and well being of the family.
- Explain the agency’s concern and reason for involvement clearly, directly, and honestly.
- Discuss issues of maltreatment (i.e., needs, conditions, and behaviors interfering with safety and well-being), consequences, timelines and the Department’s ongoing responsibilities.
- Help the family achieve a clear understanding of the safety and risk issues for the child.
- Empower the family to identify and define what it can do for itself and where the family or individual members need help.
- Focus on family strengths (e.g., culture, traditions, values, and lifestyles) as building blocks for services and family needs as a catalyst for service delivery.
- Assist the family to develop natural supports that will enhance the family’s capacity and build a circle of support that will see the family through difficult times.

The ‘art’ of practice within FTDM is a careful balance that includes a demonstrated respect for the family, the expectation that change will occur, and overseeing accountability for that change.

Standard 3. Relevant cultural issues of the child and family are identified and accommodated through adjustments in strategies, services and supports for the family in the family team decision making process.

Successful cultural competence includes:

- A basic understanding of the values and beliefs within the culture coupled with eliciting information from the child and family about traditions, cultural beliefs, behaviors, and functioning
- Demonstration of values and attitudes that promote mutual respect
- Communication styles that show sensitivity
- Accommodations in the physical environment including settings, materials, and resources that are culturally and linguistically responsive

The facilitator of a family team meeting should possess a reasonable level of competence and understanding of the culture in which the family has gained its understanding of child rearing practices. Families who speak languages other than English may require greater preparation in advance of meetings and cultural accommodations - such as the use of interpreters or co-facilitators who speak the language – to insure their full participation in a family team meeting.

Standard 4. Family teams include the family, supporters identified by the family, and others who sponsor or deliver plans of intervention for the family or any of its members.

A family team should include those persons who collectively possess knowledge of the family, have the technical skills necessary to engage the family in a change process, and who have access to resources and the authority necessary to provide effective services for the child and family. The child and family's role as team members is foundational.

For a family team meeting to be successful the child, the family, its informal supports, and all involved helping professionals must be viewed as full, participating team members. By having all services and supports present at team meetings, all contributors are aware of and in agreement with the plan, understand their role and how it relates to that of other contributors, and know what others expect of them. This mutual understanding helps to assure unity of effort and improves the effectiveness of team functioning. All team members should be present whenever major decisions are made. Periodic assessment of the team composition should be made to determine if the composition is adequate to meet the planning and resource needs of the family.

Accommodations should be made to meet the special needs of the child or family through the team formation. Examples of such circumstances include cases where the family does not speak English or is not part of the majority culture; situations involving sexual abuse, or domestic violence. Additional team members may be needed to provide support to a child or to help team members manage behaviors and make a positive contribution. When special circumstances exist it may be necessary to involve an individual who has specialized knowledge and skills (e.g. in

the area of domestic violence, or an individual who is a member of the family's culture or ethnic group) as a team member, co-facilitator, or as a support person for a team member.

Family dynamics or special circumstances may preclude the formation of a 'typical' family team. Examples of such circumstances may be court restraining orders; situations where a family team meeting would place the child or other team members in danger or significantly inhibit attainment of the child's permanency goal.

Standard 5. Family team meetings are facilitated by a person who has completed the DHS approved FTDM facilitator training and competent to conduct meetings that focus on child safety, permanency, and well being.

The facilitator may be a DHS staff member, case manager or supervisor, provider staff, community partnership staff, family support staff or others trained to facilitate family team meetings. Efforts must be made to maintain continuity of the facilitator in successive meetings.

It is important to select the most appropriate and effective facilitator for the family based on the presenting circumstances. The family members should participate in identification of the facilitator.

The competency of a facilitator is determined by demonstrated knowledge and skills. At a minimum, facilitators are approved by DHS when they have:

- Completed DHS approved Facilitator Training [minimum 18 hours],
- Completed a family team meeting as co-facilitator with an approved facilitator who has provided coaching and mentoring feedback; and
- Completed a family team meeting as lead-facilitator with an approved facilitator who has provided coaching and mentoring feedback.

Central Office will maintain a list of approved curriculums. The local DHS office will provide approval and maintain a list of approved facilitators. To be approved, experienced facilitators

and current practitioners must provide documentation of equivalent training and experience to the local office within six months of this standard going into effect.

Standard 6. Family team meetings are conducted at a mutually agreeable and accessible location that maximizes opportunities for family participation

First and foremost the family needs to be consulted and actively participate in the choice of the location. In some cases it is necessary to balance the preference of the family with the resources in your community and with the need to include a provider or other important contributor in a family team meeting.

This standard requires determination, with the family, of the best time, date, and place for convening the meeting. It also requires determination of what the family needs to fully participate in the family team meeting, such as transportation, childcare, a reminder call, an interpreter, a peer advocate or other related supports. The best place to hold a family team meeting is the most neutral, comfortable setting possible. The most important considerations for a meeting setting are the assurance of privacy, security and a place without interruptions.

Standard 7. The focus of Family Team meetings is case planning, coordination, communication, and accountability.

The focus of family team meetings is to enhance the core casework processes of family engagement, communication, functional assessment, service planning, monitoring, evaluation of results, and provide input into key decisions affecting child safety, permanency, well being, and sustainable family changes.

Family teams are formed, convened, and function to produce the family plan and/or the case permanency plan. Family teams are reconvened throughout the duration of the department's involvement with the family. The team needs to identify the conditions for safe case closure and plan for it early in the process.

Family team meetings provide an opportunity to regularly assess and monitor the effectiveness of services and interventions. If services or interventions are found to be unsuccessful – or unresponsive - the family team has an opportunity to modify the plan to meet the family’s changing needs. When progress is slow or the prognosis for reunification is declining, the family team can play an important role in helping families understand, accept, and participate in concurrent planning and the necessary permanency decisions.

The above strategies can help to build accountability while maintaining a balance between family-centered practice and the necessary protective authority of DHS in ensuring child safety, permanency, and well-being.

It should be noted that the family and age-appropriate child(ren) have the right to refuse services, unless refusal of services places the child in danger. While services may not always be delivered as requested by the family, services are to be delivered in a manner that reflects partnership between DHS and the family. When the family and child refuse or do not access services as agreed upon, the caseworker should assess the reasons for refusal and the team should consider new or modified services. If the family’s decision to refuse or not use services places the child in danger, the caseworker should notify the court.

Examples of when family team meeting occur include whenever protective or permanency decisions or plans are being made:

- The family requests a meeting.
- The family plan is being developed or changed.
- Progress is slow or the prognosis for reunification indicates a need for concurrent planning.
- Within 72-96 hours of a child’s voluntary or involuntary removal from the home for an emergency placement.
- Placement changes or permanency decisions are made, e.g. reunification, transition from foster care to adulthood, termination of parental rights.
- Before safe case closure to plan for sustainability.

Standard 8. Team members keep personal and private details of the family discussed in a

team meeting private.

All team members sign a confidentiality agreement before conducting team meetings and the facilitator explains the importance of privacy. Ensuring privacy and confidentiality is necessary for building family trust and demonstrating respect for the family. Trust is enhanced by informing all team members of the following exceptions to maintaining confidentiality which must be reported and are mandated by law:

- New allegations of suspected child abuse/neglect,
- A belief that the individual intends to harm himself or
- A belief that a person intends to bring harm to others.

Standard 9. The team assists the family to develop and use a network of informal supports that can help sustain the family over time.

If used effectively, informal supports can help sustain positive change for a family over time and permit the formal system to transition out of the family's life. These supports can also help the family deal with future challenges without the need for system intervention. The team helps the family identify, develop, and sustain informal supports. The process of recruiting and maintaining informal supports begins at the case onset, is ongoing, and should be reassessed periodically by the team.

Standard 10: The effectiveness of each family team meeting is assessed and adjustments are made to improve the ongoing process and the results for families.

Ongoing assessment of the effectiveness of family team meetings for engaging families, conducting assessment and planning activities and determining service interventions is part of ongoing practice. When problems are discovered, adjustments and adaptations should be made when needed to improve the process and results.

The indicators of family team meeting effectiveness include the following:

- Degree of engagement and sustained interest in working toward change shown by the family.
- Degree of involvement of family team members in the evaluation process and constructive use of the information gained.
- Effectiveness of the circle of support assembled for the family in addressing family issues.
- Satisfaction of team members with the process and results achieved to date.
- Quality and effectiveness of the family service plan produced in the family team meetings.
- Demonstrated degree of family acceptance of the service plan.
- Capacity for ongoing problem solving by the family.
- Degree to which the family plan was achieved.

APPENDIX M

Highlights of the first 4 encounters in the Treat First Clinical Model

1st visit: The first visit focuses only on the person's request for help, clarifying the concern, and beginning a solution-focused intervention process. A therapist would be the first point of contact if a presenting problem is psycho-social in nature, including relationship difficulties. A Community Support Worker (i.e., CSW/ CPSW) may be the first point of contact if the identified problem is social, functional, or involves basic human needs or linkage to community resources.

Registration: The client completes registration materials before meeting with a therapist or CSW. Basic one or two question screens can be included in the registration materials relative to substance use disorder, depression, risk and crisis, and trauma. The materials may include a section for the person to list medications and a Community Engagement Checklist indicating current or historical linkages to community resources, identification of a Primary Care Physician (PCP), or other providers. This should allow the therapist or CSW/CPSW to have a quick sense about the status of the individual so to be fully engaged and present with the person rather than consumed with paperwork.

Self Check-In & Session Check-Out: A Self check-in is conducted with the person at the beginning and a Session Check-Out the end of each visit. Relative rating scale results are used by the practitioner to evaluate the person's perspective on how they are doing at the beginning of the session, and how useful and beneficial the session has been in making progress towards achieving the person's desired future. There are four specific questions for both check-in's.

Information Gathering. While the first visit is focused on developing a therapeutic alliance and building trust to first address urgent needs, it should also be a time to initiate the gathering of information. This includes information necessary to complete a Diagnostic Evaluation at the conclusion of the fourth visit.

Screening and Assessment: If there are significantly alarming indicators in the responses provided in the registration process, more in-depth screening may be necessary. Besides the information gathered in the registration process a therapist should complete a Mini-Mental Status Exam (MMSE) as an important part of the first visit and determine a provisional diagnosis.

If the person is in an immediate crisis, that must be addressed before moving on to any other portion of the visit.

2nd visit: During the second visit, additional historical data are gathered. The focus is placed on medical and behavioral health history, extended support systems, identification of strengths and barriers to treatment, and other issues specifically related to presenting problem

3rd visit: Therapeutic services provided during a third visit are framed by a substantially sound understanding of the person's diagnostic situation, functional status, and evolving clinical case formulation. Additional targeted data (following local assessment and treatment planning templates) are systematically gathered to flesh-out a shared understanding by the person and provider on how to effectively address the issues raised by the person and to plan a treatment schedule for the remainder of the episode to resolve the issues.

4th visit: By the end of the fourth visit, a broader array of clinical practice functions will have begun unfolding. Early and ongoing clinical practice functions progressively come into action over time the course

A Treat First Approach:

Ensuring A Timely, Effective Response to a Person's Need While Engagement, Screening, Assessment, and Planning Processes Unfold

Purpose of This Document

This document provides an overview of a Treat First Approach and describes service elements and activities associated with the first four visits or sessions provided to a person requesting services. It is intended to provide guidance for practitioners who are implementing the practice concepts and steps during a formative testing phase.

Benefit of a Treat First Approach

Approximately 20% of all consumers will believe that their issue is adequately resolved after one visit and will not return for a second visit for positive reasons. Currently, no-show rates in many sites are between 40-60% and are usually because of the client's need (i.e., their reason for requesting services) was not addressed at the first visit. The Treat First Approach corrects the problem of delay by emphasizing the initial clinical practice functions of establishing rapport, building trust, screening to detect possible urgencies, and providing a quick response for any urgent matters when a new person presents with a problem and requests help from the agency:

Use of a Treat First Approach overcomes historic difficulties encountered by a person requesting services of having to wait for help until many required data collection tasks are completed before getting help. Delays discourage some persons from returning for a second visit. Ensuring a timely and effective response to a person's request for services is a first priority in the Treat First Approach. This strategy provides a way to achieve immediate formation of a therapeutic relationship and initiation of a response to the person's concern while gathering needed historical, assessment and treatment planning information over the course of a small number of sessions or visits.

Basic Design of a Treat First Approach

Making the most of the initial contact with a person seeking help is recognized as a key to successful engage-

ment and quick results that benefit the person. The Treat First Approach begins with a quick screening, rapid engagement, and short intervention approach in which the reason that a person requests assistance may be addressed or resolved within the span of one to three sessions or visits.

A segment of the population of persons requesting behavioral health services may be served successfully using a short intervention approach. For others who may require longer, more extensive, or specialized interventions, the early steps in the Treat First Approach would enable the service provider to gather sufficient assessment information in order to develop a clinical case formulation and comprehensive service plan by the fourth visit. The concepts, principles, and processes used in the Treat First Approach provide a responsive way of initiating a service process for a person requesting help. Brief intervention techniques such as a Treat First Approach are part of a full continuum of behavioral health care services provided in Certified Community Behavioral Health Centers, Medicaid Health Homes, and other community-based services.

A Treat First Approach provides a useful way of engaging and assisting new persons requesting help from a service provider by providing a quick response to their concerns. Using a Treat First Approach requires that practitioners engaging with the person quickly scan (screen) the person's situation to determine if any presenting factors may constitute a threat of harm to the person or to someone in the person's life. If so, necessary steps are quickly taken to keep people safe or healthy. Thus, the Treat First Approach is used as a non-crisis model. In an identified crisis situation, the practitioner follows the local crisis protocol.

Another quick discernment made by the practitioner involves the prospect that a person's request for help could be resolved within one to three sessions or visits. Some life issues (e.g., coping with the break-up of a relationship or a job loss) may be amenable to resolution with a short intervention. Other life circumstances (e.g., multiple problems, acute psychoses, cognitive inability to focus, severe substance abuse, long history of relapse, low level of social support) for which a person is requesting help may require more intensive and sustained efforts and supports.

A Treat First Approach Overview

Thus, a practitioner should quickly understand the range and severity of presenting problems and the type of services that may be necessary to meet needs and solve problems. Doing so may require conducting additional assessments, using any necessary protective strategies, gathering of collateral information, or involvement of others supporting the person may be determined and accomplished.

Strengthening Clinical Practice

Strengthening clinical practice is a goal when implementing the Treat First Approach. Practitioners employ core practice functions and clinical activities to join with a person receiving services to support a positive life change process that helps the person get better, do better, and stay better.

Typical practice functions include: connecting with a person based on a recognition of the person's identity and situation; detecting and responding to any urgent problems; building positive rapport and a trust-based working relationship; engaging the person in a positive life-change process; understanding the person's strengths, needs, and preferences; defining wellness and recovery goals to be achieved; building common purpose and unifying efforts

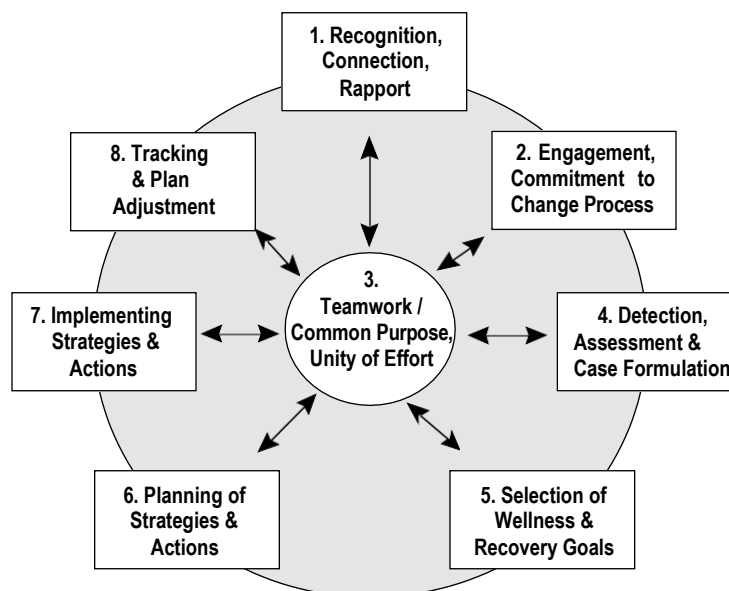

though teamwork (when longer-term services are indicated); planning intervention strategies, supports, and services; implementing plans; and tracking and adjusting strategies until desired outcomes are achieved. The diagram shown below provides a framework of core practice functions typically encouraged by service providing agencies.

The diagram illustrates early and ongoing clinical practice functions that progressively come into action over the course of the first four sessions of the Treat First Approach. Tip Sheets are provided in the *Addenda* for the practice functions used in first order actions of a Treat First Approach. Tip Sheets cover the following suggested core practices and clinical techniques:

- Recognition, connection, and rapport
- Engagement and commitment
- Detection and quick response
- Assessment and formulation
- Wellness and recovery goals
- Teamwork - common purpose and unity of effort
- Solution focused brief therapy
- Motivational interviewing

Tip Sheets are provided to promote and strengthen clinical practice.

Basic Functions Supporting Clinical Practice

Practice Functions May Occur Interactively, Concurrently, and Progressively

Visit 1

Visit 1 Goals and Activities: General Guidance

Overview

The first visit focuses only on the person's request for help, clarifying the concern, and beginning a solution-focused intervention process. The conversation should center on the following areas:

- Who and what are important to the person;
- The person's vision of a preferred future;
- The person's exceptions, strengths, and resources related to the vision;
- Scaling of the person's motivation level and confidence in finding solutions;
- Person's expectations in seeking help;
- Ongoing scaling of the person's progress toward reaching the desired future.

Treat First Practitioners

A therapist would be the first point of contact if a presenting problem is psycho-social in nature, including relationship difficulties. A Community Support Worker (i.e., CSW/CPSW) may be the first point of contact if the identified problem is social, functional, or involves basic human needs or linkage to community resources.

Visit 1 Goal

The goal of the first visit is to gain a full understanding of the presenting problem and the impact of that problem on the person's life. This is done using relationship building skills for Recognition, Connection, and Rapport to build on the person's understanding of his/her concern or situation and what the person wants to be different in the future. The foundational elements of Treat First Clinical Practice applied in the first visit are:

- Recognition, connection, and rapport
- Engagement and commitment
- Detection and quick response
- Brief and solution-focused interventions

Activities & Expectations

Registration. The client completes registration materials before meeting with a therapist or CSW. Basic one or two question screens can be included in the registration materials relative to substance use disorder, depression, risk and

crisis, and trauma. The materials may include a section for the person to list medications and a Community Engagement Checklist indicating current or historical linkages to community resources, identification of a Primary Care Physician (PCP), or other providers. This should allow the therapist or CSW/CPSW to have a quick sense about the status of the individual so to be fully engaged and present with the person rather than consumed with paperwork.

Session Check-In. A check-in is conducted with the person at the beginning and the end of each visit. Relative rating scale results are used by the practitioner to evaluate the person's perspective on how they are doing at the beginning of the session, and how useful and beneficial the session has been in making progress towards achieving the person's desired future. There are four specific questions for both check-in's. If the person is in an immediate crisis that must be addressed before moving on to any other portion of the visit.

Information Gathering. While the first visit is focused on developing a therapeutic alliance and building trust to first address urgent needs, it should also be a time to initiate the gathering of information. This includes information necessary to complete a Diagnostic Evaluation at the conclusion of the fourth visit.

Screening & Assessment. If there are significantly alarming indicators in the responses provided in the registration process, more in-depth screening may be necessary. It is important to ensure the person's safety and that the person understands the boundaries of scope of practice of the practitioner so to set appropriate expectations. Besides the information gathered in the registration process a therapist should complete a Mini-Mental Status Exam (MMSE) as an important part of the first visit and determine a provisional diagnosis. A full MSE (Mental Status Exam) may be necessary pending registration information.

Next Visit & Follow-Up

A second visit is scheduled for the following week and before the person leaves, if warranted.

Recommendations & Tips

- Using Solution Focused Brief Therapy (SFBT) concepts - See the Tip Sheet in the Addendum.
- Check-in questions and rating scales can be found in the *Addenda*.

Visit 2

Visit 2 Goals and Activities: General Guidance

Overview

During the second visit, additional historical data are gathered. The focus is placed on medical and behavioral health history, extended support systems, identification of strengths and barriers to treatment, and other issues specifically related to presenting problem(s).

Treat First Practitioners

Formative information for developing a clinical case formulation may be assembled, and the beginnings of a treatment or comprehensive service plan are noted.

Visit 2 Goal

The service provider discusses with the person the probable number of visits needed to resolve this particular episode of care. If it becomes apparent that the person has a newly identified condition (e.g., SMI or SED) that requires complex rehabilitation services, up to and including psychiatric medication, then a more formal approach to assessment, case formulation, and planning will be initiated.

Foundational elements of clinical practice that may be used or added during the second visit include:

- Recognition, connection and rapport
- Engagement and commitment
- Detection and quick response
- Motivational, brief and solution focused intervention
- Assessment and formulation
- Wellness and recovery goals

These basic practice elements are initiated in visit 1 and continue as indicated over successive visits as practice unfolds to assist the person requesting help. Tip Sheets explaining these elements of practice are provided in the *Addenda* of this document.

Activities & Expectations

Self & Session Check-In. A check-in is conducted with the person at the beginning and the end of each visit. Relative rating scale results are used by the practitioner to evaluate

the person's perspective on how they are doing at the beginning and end of a session. A Self Check-in at the beginning shows how well he/she is doing and what has changed since the last session. At the end of the session a Session Check-in is conducted with the person by the practitioner on how useful and beneficial the session has been in making progress towards achieving the person's desired goals.

Information Gathering. Information for developing a clinical case formulation is being gathered and assembled. With a focus on behavioral health, medical history, strengths and barriers to treatment, extended support systems and other issues related to goals/problem. The provisional diagnosis is further explored utilizing a more formal approach to assessment through various techniques, strategies and diagnostic review tools.

Treatment Planning. Elements of a treatment plan are beginning to develop. Initial wellness and recovery goals are explored. The service provider and the person discuss the possible number of visits that may be necessary to resolve current and/or future goals or problems.

Next Visit & Follow-Up

A third visit is scheduled before the person leaves, if necessary for resolution of the reason that the person is requesting help.

Recommendations & Tips

Building on the prior functions it is anticipated that from 50 to 65% of all needed data for a diagnostic evaluation, treatment plan (including complete crisis plan if needed), and modified diagnostic review should be available following the completion of the second therapeutic visit.

- Daily Living Activities- Functional Assessment (DLA-20)
- Functional Skills Evaluation
- Motivational Enhancement
- Brief Solution Focused Techniques/Strategies
- How to interpret self/session check-ins

Visit 3

Visit 3 Goals and Activities: General Guidance

Overview

Therapeutic services provided during a third visit are framed by a substantially sound understanding of the person's diagnostic situation, functional status, and evolving clinical case formulation. Additional targeted data (following local assessment and treatment planning templates) are systematically gathered to flesh-out a shared understanding by the person and provider on how to effectively address the issues raised by the person and to plan a treatment schedule for the remainder of the episode to resolve the issues.

Treat First Practitioners

If concurrent completion of the diagnostic evaluation is possible, then the therapist (not the CSW) should complete it and coordinate the completion of the treatment plan (which may involve more than one direct service provider by now) separately from a visit.

Visit 3 Goal

Where possible, data gathering for a complete diagnostic evaluation can be completed in this visit, but therapeutic concerns must be the priority. The new critical element - introduced in Visit 3 is Teamwork - common purpose and unity of effort. If completion of the diagnostic evaluation is not possible the person may be invited back for additional visits with the fourth visit ensuring a mutual agreement between the therapist and consumer on the detail in a diagnostic evaluation and the sharing of a completed written treatment plan with the person. This third visit could be billed as either a diagnostic evaluation or as an individual therapy visit.

The foundational elements of clinical practice that may be used or added during the third visit include:

- Recognition, connection, and rapport
- Engagement and commitment
- Detection and quick response
- Assessment and formulation
- Wellness and recovery goals
- Teamwork - common purpose and unity of effort
- Solution focused brief therapy

These basic practice elements are initiated in Visit 1 and continue as indicated over successive visits as practice unfolds to assist the person requesting help.

Activities & Expectations

In summary, these are the activities expected to occur during the third visit:

- A Self Check-In is conducted with the person to assess how well he/she is doing at the beginning of the session and what has changed since the last session.
- Services delivered are based on understanding the person's diagnostic situation, functional status and evolving clinical case formulation. The clinical case formulation evolves over time as more knowledge is gained.
- Additional data are gathered to build a shared understanding by client and therapist on how to effectively address issues raised by the client.
- Determination made about what else may be required to resolve this episode of care.
- Need for more visits are discussed along with goals and any new goals to be met.
- Based on goals selected, more specific and detailed treatment plans are developed.
- A treatment schedule is planned to resolve any remaining ongoing issues.
- A Session Check-In is conducted with the person. Rating scale results are used by the practitioner to evaluate the person's perspective on how useful and beneficial the session has been in making progress.

Next Visit & Follow-Up

The likelihood of a fourth visit is largely dependent on the degree to which the person and therapist/CSW have established the person's identified goals and desired outcomes along with a positive therapeutic relationship.

Recommendations & Tips

Tips sheets explaining these elements of practice are provided in the *Addenda* to this document.

Visit 4

Visit 4 Goals and Activities: General Guidance

Overview

By the fourth visit, some of a person's issues may have been resolved in earlier sessions while other remaining concerns may require further efforts to address. The likelihood of reaching a fourth visit may depend in part on the degree to which the person and therapist/CSW have identified further goals, achieved progress to some goals, and formed a positive therapeutic relationship. It is expected that the service provider will have a complete and clinically defensible diagnostic evaluation and treatment plan by or upon completion of the fourth visit in any episode of care.

Treat First Practitioners

By this fourth visit for persons having serious diagnosis and/or experiencing complex life situations, additional sessions or ongoing services may be required to address their needs. The treatment team may now consist of not only a therapist and CSW, but other treatment providers such as a Psychiatrist, a Nurse, and Peer Support Specialist and so on may now be part of the person's treatment team.

Visit 4 Goal

By the end of the fourth visit, a broader array of clinical practice functions will have begun unfolding. Early and ongoing clinical practice functions progressively come into action over time the course of the first four sessions. Tip Sheets are provided in the *Addenda* for the practice functions that are applied in first order actions of a Treat First Approach.

Activities & Expectations

Self & Session Check-In. A check-in is conducted with the person at the beginning and the end of each visit. Relative rating scale results are used by the practitioner to evaluate the person's perspective on how they are doing at the beginning and end of a session. A Self Check-in at the beginning shows how well he/she is doing and what has changed since the last session. At the end of the session a Session Check-in is conducted with the person by the practitioner on how useful and beneficial the session has been in making progress towards achieving the person's desired goals.

Accomplishments by Visit 4. By conclusion of a fourth visit, the following items will be completed by the provider:

- Screenings, evaluations, and assessments that provide a sufficient bio-psycho-social understanding of the person's situation (e.g., reasons for requesting assistance, aspirations for wellness/recovery, preferences, risks of harm, and any significant unmet needs) to develop a useful clinical case formulation and course of action.
- Clinical case formulation including a clinical history and concise summary of the bio-psycho-social factors contributing to the present disorder. It focuses on clinically significant distress and impairment in functioning experienced by the person. The case formulation considers the combination of predisposing, precipitating, perpetuating, protective, and predictive factors contributing to the condition of concern.
- Final Diagnosis: based on a full Clinical Formulation
- Wellness and recovery goals to guide a course of action.
- Comprehensive treatment plan to define a course of action for meeting the person's wellness and recovery goals.

Functional understandings and clinical case formulation have been used to guide development of a comprehensive treatment plan, including support plans where indicated, informed by the person's life stage, culture, social context, and preferences.

Continuation into Ongoing Services

For persons having serious diagnoses and/or experiencing complex life situations, additional sessions or ongoing services may be required to address their needs.

A Treat First Approach may be useful for all persons receiving services.

Recommendations & Tips

Tips sheets explaining these elements of practice are provided in the *Addenda* to this document.

Addenda - Tip Sheets

Purpose of the Tip Sheets

The Treat First Approach Overview introduces several core practice functions and clinical techniques that can support effective clinical work with persons requesting assistance -- both during and after the first four visits in an episode of care. These Tip Sheets are offered in the spirit of practice development and intended to promote building of craft knowledge needed by frontline practitioners when implementing a Treat First Approach in their agencies.

Tip Sheets define expected outcomes to be achieved when a practice or technique is used and introduce important concepts and strategies related to the practice or technique. Tip Sheets are not meant to serve as a substitute for necessary training and development of staff competencies required to perform these practices and techniques. Rather, Tip Sheets are meant to alert provider staff members and agency leadership that frontline practitioners require the craft knowledge necessary to perform these practices and techniques as well as the organizational supports necessary to integrate them into their everyday work.

Tip Sheets - Title and Order of Presentation

The Tip Sheets are titled and organized as follows on pages 8 through 15:

- Practice Area: Recognition, Connection, and Rapport
- Practice Area: Engagement and Commitment
- Practice Area: Detection and Rapid Response
- Practice Area: Assessment and Formulation
- Practice Area: Wellness and Recovery Goals
- Practice Area: Teamwork - Common Purpose and Unity of Effort
- Clinical Technique: Solution Focused Brief Therapy
- Clinical Technique: Motivational Interviewing

Readers should note that practice areas listed above are core practice functions described in a general framework used for training, supervision, and measurement of practice. That framework is illustrated in the diagram appearing on page 2.

Practice Area: Recognition, Connection, Rapport

Desired Outcomes of Practice

RECOGNITION, CONNECTION & RAPPORT: • The person's sense of identity, culture, values and preferences, social network, and life experiences are recognized by practitioners involved with the person. • Any barriers to personal connection and acceptance are recognized and resolved. • Necessary conditions for building mutual respect and rapport are established as a basis for successful engagement.

Key Concepts

As an early step in building a relationship with a person entering services, practitioners recognize the nature of the person's situation and life story. Recognition involves discovering the circumstances that have brought the person into agency services and anticipating the life changes necessary for the person to make in order to conclude services successfully. Practitioners recognize the person's sense of identity, culture, values and preferences (especially any arising from religious conviction), social and economic supports, and life-shaping experiences (e.g., adverse childhood experiences, combat trauma, addiction, emigration, poverty) that explain the person's life story and reasons for entry into services. An important element in the process is recognition of any barriers that could thwart formation of positive connections with the person that could undermine acceptance and rapport building necessary for successful engagement. Successful practitioners take steps for creating conditions necessary for building mutual respect and rapport required in developing trust-based working relationships.

Recognition of a person's identity requires varying degrees of cultural responsiveness, depending on the person involved. Every person has his/her own unique identity, values, beliefs, and world view that shape ambitions and life choices. Some persons may require use of culturally relevant and responsive supports in order to successfully connect, educate, assist, and support them moving through the system. Responsiveness includes valuing cultural diversity, understanding how it impacts family functioning in a different culture, and adapting service processes to meet the needs of culturally diverse groups of persons receiving services. Properly applied in practice, cultural responsiveness reduces the likelihood that matters of language, culture, custom, identity, value, or belief will prevent or reduce the effectiveness of life change efforts undertaken via interventions, supports, and services.

Making sensitive cultural accommodations, where needed, involves a set of strategies used by practitioners to individualize the service process to improve the goodness-of-fit between the person (and the person's supporters) and service providers who work together in the wellness / recovery process. Many persons may require simple adjustments due to differences between the persons and their providers. Such simple adjustments are a routine part of engagement, assessment, planning, and service provision. A person's identity [e.g., race, tribe, ethnicity; social group; sexual orientation; religion; or disability, such as deaf] may shape his or her world view and life goals in ways that must be understood and accounted for in practice. Recognition, connection, and rapport provide a foundation for building and sustaining trust-based working relationships.

Practice Tips

1. LEARN THE REASON the person is seeking help. CONSIDER whether the person's problem can be RESOLVED IN A SINGLE VISIT OR A BRIEF INTERVENTION. DISCERN whether the person's problem is emergent/transient or serious/persistent. DETERMINE whether the reported problem is a present THREAT TO HEALTH OR SAFETY so that any need for crisis intervention or urgent response can be identified and provided.
2. If the person reports being in physical pain or emotional distress, ASK ABOUT its nature, source, history, and impact on the person's life situation. Use the person's responses to form a theory that explains how the pain or distress came about, what causes it to continue, what has been done to alleviate it in the past, what has worked/not worked before, and who else may be helping the person relieve or solve this problem now. *Note: Recognition & Rapport and Detection & Response are performed concurrently by the practitioner when a person is entering services.*
3. In early interactions, DISCOVER the person's sense of identity, culture, values and preferences (especially any arising from religious conviction), world view, social and economic supports, strengths and needs, present life challenges, and life-shaping experiences (e.g., adverse childhood experiences, combat trauma, recent loss, addiction, emigration, poverty) that explain the person's situation and reasons for requesting help.
4. IDENTIFY the person's LANGUAGE & CULTURE. DISCERN any impact that cultural or language differences may play in building rapport and forming a working relationship with the person. RECOGNIZE any barriers (arising from culture, language, gender, class, religious or political beliefs, life experiences, sexual orientation, work or family demands, or disability) that could thwart or limit the formation of positive connections with the person that would undermine acceptance and rapport building necessary for developing successful trust-based working relationships.
5. TAKE ACTIVE STEPS in establishing positive conditions for building MUTUAL RESPECT AND RAPPORT with the person.

Practice Area: Engagement & Commitment

Desired Outcomes of Practice

ENGAGEMENT & COMMITMENT. • Service providers are building and maintaining a trust-based working relationships with the person and the person's informal supporters to involve them in ongoing assessment, service planning, and wellness and recovery efforts. • Service providers are using effective outreach and ongoing engagement strategies to increase and sustain the person's participation in the service process and commitment to life changes that support wellness and recovery, consistent with the person's needs and preferences.

Key Concepts

Effective wellness and recovery services depend on effective working relationships between a person in need and the service providers who help meet those needs. Service providers make concerted efforts to reach out to the person, engage him/her meaningfully in all aspects of the service process, establish and maintain a trust-based working relationship, and secure and sustain the person's commitment to a change process. Engagement strategies build a mutually beneficial partnership in decision-making and life change efforts. The person's direct, ongoing, active involvement is used in assessment, planning interventions, selecting providers, monitoring and modifying service plans, and evaluating results. Engagement strategies vary according to the needs of the person and should reflect the person's language and culture.

Building Trust-Based Working Relationships. Building upon recognition of the person's identity, reason for seeking services, and a positive rapport, ongoing engagement efforts are used to form and maintain a trust-based, mutually beneficial working relationship between the person and those serving the person. Practice approaches that support effective relationship building are:

- Person-centered (organizes around the person's goals)
- Wellness-oriented and outcome-driven (starts with the end in mind)
- Strengths-based (builds on the person's positive assets)
- Building readiness for change (uses motivational interviewing strategies)
- Solution-focused (moves from problems to solutions)
- Fits the person's stages of change (starts where the person is ready)
- Need-responsive (recognizes and responds to needs)
- Respect for the person's identity, culture, aspirations, and preferences

In the absence of a trust-based working relationship with the service provider, the person is unlikely to reveal the underlying issues that explain the dynamic circumstances causing the problem that must be solved in order to achieve desired wellness and recovery outcomes.

Building Commitment to Positive Life Change. A major contribution of effective engagement is the person's ongoing commitment to personally choose wellness and recovery outcomes and to the change process used to achieve these outcomes. In the absence of the person's commitment to life change, wellness and recovery outcomes are not likely to be achieved.

Practice Tips

1. Remember that building a relationship with a person involves recognizing the nature of the person's life situation and reasons for requesting help. LISTENING is key to learning, empathy, respect, and trust building. Finding and overcoming any barriers to personal connections are essential. Recognition and rapport provide a foundation for building and sustaining a trust-based working relationship.
2. Use a person-centered approach that puts the person's voice and choice at the center of the service process. Recognize and respond to the person's unmet needs related to wellness, well-being, and daily functioning. Use a solution-focused approach that is future-focused, goal-directed, and focuses on solutions, rather than on the problems that brought the person to seek help. Solution-focused practice aims to bring about desired change in the least amount of time. [Tenets of solution-focused practice include: If it's not broken, don't fix it. If it works, do more of it. If it's not working, do something different rather than just trying harder. A solution is not necessarily related to the perceived problem. Small steps in the right direction can lead to big changes.] A strengths-based practice approach emphasizes a person's self-determination and strengths. Identify and build on the person's strengths and assets to create sustainable resources for solutions.
3. Change-oriented approaches are especially useful in addressing lifestyle modification for disease prevention, long-term disease or disorder management, and addiction. Understanding a person's readiness to make change, appreciating barriers to change, and helping anticipate relapse can improve the person's satisfaction and lower practitioner frustration during the change process. A stages of change approach is useful in stimulating change and overcoming resistance.
4. Remember that engagement is an ongoing process that builds and sustains: 1) a mutually beneficial trust-based working relationship between the person and 2) a person's commitment to personally selected wellness and recovery outcomes and to the life change process.

Practice Area: Detection & Rapid Response

Desired Outcomes of Practice

DETECTION & EARLY RESPONSE. • A person who is at risk of harm due to safety, health, or situational threats is detected via screening and other means and then kept safe from harm by using rapid response strategies to mitigate risks and protect the person from imminent threats to the person's well-being.

Key Concepts

Detection. Upon admission, screening is performed to identify a person who may have an imminent threat of harm from life partners, caregivers or who may have an undiagnosed health or behavioral condition or who may be at high risk of developing a condition requiring treatment. A person should be screened upon admission and periodically thereafter for certain life situations, conditions, and disorders that may require diagnosis, treatment, and ongoing care. Life situations, conditions, disorders, or diseases for which screening should be routinely performed include:

- Safety/threats of harm at home
- Adverse childhood experiences/complex trauma
- Emotional status/behavioral disorders
- Health status/physical well-being/illness
- Inappropriate or unstable living situation
- Self-endangerment/threats of harm to others
- Intellectual or developmental disability/TBI/learning problems
- Drug/alcohol use/substance use disorder
- Diseases: diabetes, COPD, obesity, hypertension, seizures
- A pattern of instability or a trajectory of physical or emotional decline

Other agencies and practitioners involved in providing services to the person should be identified and contacted to provide necessary opportunities for service delivery, coordination, and integration.

Rapid Response

Rapid Response. Following detection of a threat of harm or an emergent condition, a response is an action taken to avert a safety threat, stop the progression of a disease, control a behavioral disorder, or to mitigate preventable injury or illness. A timely and appropriate response is provided for any person who is detected via a screening process as has having a condition, disorder, or disease for which intervention or treatment is indicated.

A Rapid Response [following the detection of a serious threat or rapidly developing condition]: a response commensurate with the urgency, severity, and intensity of a detected problem, especially when the person is at imminent risk of harm (e.g., sudden death via suicide) or at high risk of a poor health outcome (e.g., a brittle diabetic adolescent who violates dietary restrictions).

Practice Tips

1. Screenings of the person are performed upon admission and periodically thereafter. Practitioners continue to conduct screenings to detect safety, health, and behavioral risks as well as any emergent conditions or disorders as an ongoing assessment process.
2. Based on results of screenings and self-reports by the person, any problems of significance (involving safety, health, or behavioral risks or other situations that could lead to instability or decline) are promptly detected. The nature, significance, and history of any detected problem are defined and reported to any other practitioners or agencies that should be involved in providing an appropriate response to the person's need for prevention, protection, treatment, or care.
3. Any problem requiring a crisis intervention or urgent response is addressed in a timely, appropriate, and sufficient manner so as to prevent unnecessary harm, pain, loss, or hardship for the person. Each response provided is commensurate with the urgency and severity of the presenting problem. Any response provided protects the person from preventable harm or mitigates the impact the problem would have likely had if not treated promptly and effectively.
4. Results of initial and ongoing screenings are incorporated into the ongoing bio-psycho-social assessment and clinical understanding/case formulation of the person's situation. Any significant screening and detection results are used to develop necessary protective interventions and/or treatments to keep the person safe, physically and behaviorally healthy, and functioning effectively in daily life.

Practice Area: Assessment & Formulation

Desired Outcomes of Practice

ASSESSMENT & FORMULATION. • Ongoing formal and informal fact finding methods are used to develop and update a broad-based understanding of the person's bio-psycho-social situation, clinical history, strengths and assets, unmet needs, life challenges, stressors, and aspirations for wellness and recovery. • An evolving clinical case formulation (describing the person's clinically significant distress and impairment in functioning) is used to guide development of treatment plans informed by the person's life stage, culture, social context, and preferences.

Key Concepts

Ongoing assessment and clinical case formulation guide the course of action designed and used by service providers to help a person meet wellness and recovery goals that he/she has selected. Assessment processes are used to gather facts and assemble information and knowledge for developing a functional understanding of the person's situation and desired life change outcomes. Assessment provides answers to practical and clinical questions [see the separate list of clinical questions] that are used to develop a working understanding for the person from which treatment decisions are made. Based on the working understanding, a clinical case formulation is developed and updated as new understandings emerge. The formulation is used in developing a course of action (treatment and supports) for meeting the person's wellness and recovery goals.

Assessment & Understanding. As appropriate to the person's situation, a combination of clinical, functional, and informal assessment techniques are used to determine the strengths, needs, risks, underlying issues, and future goals of the person. Once gathered, the information is analyzed and synthesized to form a functional understanding and a bio-psycho-social clinical formulation used in developing a course of action for the person. Assessment techniques, both formal and informal, are appropriate for the person's life stage, ability, culture, language or system of communication, legal issues, and life situation. Areas in which essential understandings are developed include:

- Earlier life traumas, losses, and disruptions
- Learning problems affecting school or work performance
- Subsistence challenges encountered in daily living
- Risks of harm, abuse, neglect, intimidation, or exploitation
- Traumatic brain injury and/or intellectual disabilities
- Court-ordered requirements/constraints/detention
- Recent life disruptions (e.g., eviction, bankruptcy)
- Co-occurring life challenges (mental illness, addiction, domestic violence)
- Significant physical health and/or behavioral health concerns
- Recent tragedy, trauma (including combat trauma), losses, victimization
- Problems of attachment, bonding, self-protective boundaries in relationships
- Recent life changes (e.g., new baby, job loss) requiring major adjustments
- Any significant screening and detection findings (health or safety risks)
- Dislocation due to natural disaster or changes in the local job market

Case Formulation and Clinical Reasoning. Understandings developed from ongoing assessments are used to create a clinical case formulation that guides service decisions and actions. Clinical reasoning is applied in moving from understanding to action: Any compelling urgency is addressed first. Practical solutions may precede clinical solutions in the course of action. Plans develop from outcome to action. Opportunities for early and repeated successes are identified and pursued. A pace of action that could overwhelm the person is avoided.

Practice Tips

1. Remember that the outcome of assessment is an essential FUNCTIONAL UNDERSTANDING of the person used in case formulation to guide intervention planning. Assessment is a continuous learning process involving the person and service providers, not a form to complete upon intake or other points in the course of action. Assessment includes the gathering and assembly in facts, information, and knowledge to develop a broad-based understanding of the person's situation used to support decision making.
2. A clinical case formulation includes a clinical history and concise summary of the bio-psycho-social factors contributing to the present disorder. It focuses on clinically significant distress and impairment in functioning experienced by the person. The case formulation considers the combination of predisposing, precipitating, perpetuating, protective, and predictive factors contributing to the condition of concern.
3. Practical reasoning and clinical judgment are used in making a reliable assessment of factors related to a person's disruption in daily functioning or role fulfillment. Functional understandings and clinical case formulation are used to guide development of a comprehensive treatment plan, including support plans where indicated, informed by the person's life stage, culture, social context, and preferences.
4. Principles of person-centered practice and self-directed care are applied in all aspects of assessment and clinical case formulation.

Practice Area: Wellness & Recovery Goals

Desired Outcomes of Practice

WELLNESS & RECOVERY GOALS: • Clearly stated, well-informed, and personally-selected wellness and recovery goals are developed with the person and used to guide intervention strategies toward attainment of desired levels of well-being, supports for living, daily functioning, inclusion, productivity, and role fulfillment for the person.

Key Concepts

WELLNESS is an active process in which a person becomes aware of and makes choices toward a more successful existence. Wellness is a conscious, self-directed, and evolving process of achieving full potential. Wellness is a multidimensional and holistic, encompassing lifestyle, mental and spiritual wellbeing, and the environment. Wellness is positive and affirming. [National Wellness Institute]

RECOVERY is a process through which persons improve their health and wellness, live a self-directed life, and strive to reach their full potential. Ten guiding principles of recovery are: hope, person-driven, many pathways, holistic, peer support, relational, culture, responsive to trauma, strengths and responsibility, and respect. [SAMHSA]

Consistent with the principles of person-centered practice, personally-selected wellness and recovery goals vary among persons having a wide range of personal needs, aspirations, and life trajectories reflective of their age, ability, and situation:

- A person experiencing a simple, acute problem, but having no systematic barriers or impediments, should improve quickly and reach desired levels of well-being, sustainable supports, daily functioning, and independence with minimal assistance and limited interventions.
- A person experiencing a chronic problem with minimal systematic barriers or impediments should achieve adequate levels of stability, functioning, and well-being while self-managing the condition as independently as possible until he/she requires more intensive temporary care or treatment. Once the person regains adequate levels of stability, functioning, and/or well-being, he/she resumes self-management of the condition with a lower level of ongoing monitoring and support from the system.
- A person having limited capacities and/or major systematic barriers or impediments should achieve and maintain his/her best attainable level of functioning, well-being, and support until his/her status changes. Persons having intellectual disabilities, serious and persistent mental illness, traumatic brain injury, and the frail elderly often require more intensive or specialized long-term care services.

Personal wellness and recovery goals specify: (1) Levels of well-being, supports, daily functioning, productivity, or social integration to be achieved by the person; (2) Aspirations for fulfilling life roles (e.g., employee, parent, life partner, grandparent) the person seeks to achieve including the manner and degree of accomplishment; and (3) Any requirements to be met (e.g., discharge from hospital or detention) before interventions are transitioned to either ongoing maintenance services (e.g., self-management with monitoring, reunification of children from foster care) or independence from the service system. Wellness and recovery goals define outcomes to be accomplished via services.

Practice Tips

1. Use person-centered planning techniques to help the person identify and state what he/she expects to gain or achieve from the service process. Frame these expectations as wellness or recovery goals using the person's own words. Make sure the goals selected for service planning are based on the person's assessed needs, expressed aspirations for wellness and recovery, and socially-beneficial choices.
2. Construct goals that are SMART: Specific, Measurable, Achievable, Relevant, and Time-bound. Clear goals help in planning intervention strategies and measurement of results. Relevant and achievable goals promote the person's motivation and commitment to the change process.
3. Consider the nature, purpose, trajectory, time required, person's motivation, and opportunities available for achieving the goals selected. Recognize that there may be an important order of priority in which goals are addressed. Any compelling urgencies should be addressed first.
4. Use the person's wellness and recovery goals to guide the selection of strategies to be used for their attainment. Identify goals for which the involvement of other practitioners or agencies will be involved in or responsible for the helping the person achieve the desired outcomes.
5. Use teamwork processes to build common purpose and unity of efforts with other supporters, practitioners, and agencies involved in helping the person achieve his or her wellness and recovery outcomes.

Practice Area: Teamwork/Common Purpose & Unity of Effort

Desired Outcomes of Practice

TEAMWORK / COMMON PURPOSE & UNITY OF EFFORT. • Using a shared-decision making process, the person and the person's practitioners and supporters are building and sustaining: • **Common purpose** by planning wellness/recovery goals and strategies together with the person. • **Unity of effort** in service delivery by coordinating actions of the person's providers and integrating services across providers, settings, time, and funding sources.

Key Concepts [*These Aspects of Practice are Applied to Persons Having Complex Needs and Ongoing Services*]

Person-centered practices and self-directed care principles put the person's needs, aspirations, and choices at the center of service organization. A team-based, shared decision-making process helps the person to create a vision for a better life based on aspirations for wellness, valued social roles, social inclusion, and successful daily living. Informal supporters and service providers join with the person (consistent with the person's preferences) to define wellness/recovery goals to be achieved along with related strategies for provision of supports and services. Because the efforts of many may be involved in helping the person, achieving common purpose and unity of effort are essential for success. Together, common purpose and unified efforts create the "glue" that holds things together in practice for the benefit of the person receiving services.

Common Purpose. Common purpose is created when the people involved agree upon and commit to clear goals and a related course of action. An ongoing, person-centered, team-based, shared decision-making process may be used to achieve and maintain a consensus on and commitment to a set of wellness/recovery goals and related strategies. These goals and strategies are determined by and with the person, the person's primary supporters, and the service providers involved. CONSENSUS and COMMITMENT are essential for building common purpose.

Unity of Effort. Unity of effort is based on: (1) A common understanding of the person's situation; (2) A common vision for the person's wellness or recovery; (3) Coordination of efforts to ensure coherency and continuity; (4) Common measures of progress and ability to change course, if necessary. Unity of effort is achieved and maintained via ongoing teamwork, coordination of actions among providers and supporters, and integration of services across providers, settings, funding sources, and points in time. Unity of effort is the state of harmonizing actions and efforts among multiple service providers and supporters who are committed to helping the person achieve agreed upon goals and shared outcomes.

Practice Tips

1. Remember that effective TEAMWORK and SERVICE COORDINATION help build common purpose and unity of effort in frontline practice. Effective teamwork involves having the right people working together with and for the person being served. The team should have the technical and cultural competence, knowledge of the person, authority to act on behalf of funding agencies and to commit resources, and ability to flexibly assemble supports and resources in response to specific needs. Members of the team should have the time available to fulfill commitments made to the person. **NOTE:** Persons having serious, persistent illnesses (requiring ongoing care and treatment) benefit most from effective teamwork and service coordination. Person-centered teams are useful for persons receiving multiple ongoing care and treatment services.
2. The person's team assists in conducting person-centered planning activities and in providing assistance, support, and interventions after plans are made in order to meet the person's wellness/recovery goals. Working together, team members support the person in identifying needs, setting wellness/recovery goals, and planning strategies with related services that will enable the person to meet those goals. Effective, ongoing, collaborative problem solving is a key indicator of effective team functioning.
3. Leadership and coordination are necessary to: (1) form a person-centered team and facilitate teamwork; (2) plan, implement, monitor, modify, and evaluate services provided; (3) integrate strategies, activities, resources, and interventions agreed to by the team; (4) measure and share results for the individual in order to change strategies that do not work and to determine progress; and (5) ensure a unified process involving a shared decision-making approach. While leading and coordinating may be appropriately discharged by a variety of team members, it is most effectively accomplished by a designated leader who prepares team members, convenes and organizes meetings, facilitates team decision-making processes, and follows up on commitments made. Individual(s) filling these roles should have strong facilitation skills, authority to act, and, as appropriate to role, clinical skills in assessing, planning, monitoring, and evaluation. In a case where several agencies and providers are involved, negotiation may be necessary to achieve and sustain a coordinated and effective service process. Leadership and coordination responsibilities can be shared with an empowered and capable service recipient. This may be an appropriate outcome of interventions for the person receiving services.
3. Team functioning and decision-making processes should be consistent with principles of person-centered practice and self-directed care. Evidence of effective team functioning over time is demonstrated by the quality of relationships built, commitments fulfilled, results achieved, unity of effort shown by all members of the team, the focus and proper fit of services assembled for the person, dependability of service system performance, and connectedness of the person to critical resources necessary for achieving wellness/recovery goals.

Clinical Technique: Solution Focused Brief Therapy

Desired Outcomes of Practice

SOLUTION FOCUSED BRIEF THERAPY: • The person's concerns and reasons for requesting help are clarified. • The person's aspirations and vision for a preferred future are stated. • The person demonstrates motivation and confidence in finding solutions. • The person's strengths and past successes are used to build solutions. • The person is taking small steps in the right direction toward a preferred future.

Key Concepts

A practice that may be useful in a Treat First Approach is Solution Focused Brief Therapy (SFBT) that focuses on a person's strengths and previous successes rather than failings and problems. SFBT consists of conversations that stimulate and support positive life change for a person receiving services. These conversations are centered on the person's concerns; who and what are important to the person; a vision of a preferred future; the person's exceptions, strengths, and resources related to the vision; scaling of the person's motivation level and confidence in finding solutions; and, ongoing scaling of the person's progress toward reaching the desired future. The goal is helping a person rapidly find a solution to a resolvable life problem. The basis for a brief intervention builds on the person's understanding of his/her concern or situation and what the person wants to be different in the future.

Basic concepts of SFBT are:

- It is based on solution-building, not problem-solving.
- It encourages the person to increase the frequency of useful behaviors.
- The person and provider create solutions based on what has worked in the past.
- It asserts that small steps in the right direction lead to larger changes.
- It is focused on the person's desired future, not the past.
- It assumes that solution behaviors already exist for the person.
- It places responsibility for change on the person.

SFBT has been recognized as an evidence-based practice and is listed on the SAMHSA National Registry of Evidence-Based Programs and Practices.

Solution-Focused Questions

Solution-focused questions about the topics of conversation are used to connect to and build on the concerns and aspirations expressed by the person. Examples of solution-focused questions include:

- Given the issue or problems you are faced with, what are you hoping we can achieve together?
- How would you like your life to change in regard to the issues we have been discussing?
- Are there things you have tried already to solve this problem?
- What are some things you have already accomplished that you are pleased with?
- What types of support do you have from family/community/resources?
- What personal traits, skills, and talents have helped you in the past?
- What personal qualities are helping you get through these difficult times right now?
- How is it you found the strength and wisdom to come here for help?
- What do you suppose you do or have done so that the problem isn't any worse?
- With such difficulties in your life, how have you been able to get up and face each day?
- How are your life and your functioning affected by having a diagnosis of _____?
- What have you tried in the past when confronted with these types of problems?
- Would this type of solution help with your situation now?
- When you have achieved your goal, what are some things you will experience that will let you know that your goal has been accomplished?
- If your problem suddenly went away, what would be the first thing you would notice about yourself (how would be feeling, thinking, doing)?
- How would those around you know that this big change had occurred?
- What will be different in your life when the problem is gone?

Clinical Technique: Motivational Interviewing

Desired Outcomes of Practice

MOTIVATIONAL INTERVIEWING: • The person is increasingly aware of the potential problems caused, consequences experienced, and risks faced as a result of a particular behavior. • The person envisions a better future and becomes increasingly motivated to achieve it.

Key Concepts: Motivational Interviewing is a Technique Used with Solution Focused Brief Therapy

Motivational interviewing is a method that works on facilitating and engaging intrinsic motivation within the person in order to change behavior. The examination and resolution of ambivalence is a central purpose and the practitioner is intentionally directive in pursuing this goal. Motivational interviewing is a semi-directive, person-centered counseling style for eliciting behavior change by helping a person to explore and resolve ambivalence. It is change-focused and goal-directed. Motivational interviewing is non-judgmental, non-confrontational and non-adversarial. Motivational interviewing recognizes and accepts the fact that persons who need to make changes in their lives approach counseling at different levels of readiness to change their behavior. Some persons may have thought about it but not taken steps to change it or may be actively trying to change behavior and may have been doing so unsuccessfully for years. In order for a practitioner to be successful at motivational interviewing, four basic skills should first be established: 1) The ability to ask *open-ended questions*. 2) The capacity for *reflective listening*. 3) The ability to provide *affirmations*. 4) The ability to periodically provide *summary statements* to the person. The motivational approach attempts to increase the person's awareness of the potential problems caused, consequences experienced, and risks faced as a result of the behavior in question. Alternately, practitioners help the person envision a better future, and become increasingly motivated to achieve it. The strategy seeks to help the person think differently about their behavior and ultimately to consider what might be gained through change.

Motivational interviewing focuses on the present and entails working with a person to access motivation to change a particular behavior that is not consistent with a person's personal value or goal. *Warmth, genuine empathy, and unconditional positive regard* are necessary to foster therapeutic gain within motivational interviewing. The main goals of motivational interviewing are to establish rapport, elicit change talk, and establish commitment language from the person. A central concept is that ambivalence about decisions is resolved by conscious or unconscious weighing of pros and cons of making change versus not changing. It is critical to meet people where they are and to not force a person towards change when they have not expressed a desire to do so. The four general principles are:

1. **Express Empathy.** Empathy involves seeing the world through the person's eyes, thinking about things as the person thinks about them, feeling things as he or she feels them, sharing in the person's experiences. The practitioner's accurate understanding of the person's experience facilitates change.
2. **Develop Discrepancy.** This guides practitioners to help persons appreciate the value of change by exploring the discrepancy between how the person wants his or her life to be versus how it is currently (or between their deeply-held values and their day-to-day behavior). Practitioners work to develop this situation through helping persons examine the discrepancies between their current behavior and future goals.
3. **Roll with Resistance.** The practitioner does not fight a person's resistance, but "rolls with it." Statements demonstrating resistance are not challenged. Instead the practitioner uses the person's "momentum" to further explore his or her views. Using this approach, resistance tends to be decreased rather than increased, as persons are not reinforced for becoming argumentative. Motivational interviewing encourages persons to develop their own solutions to the problems that they themselves have defined.
4. **Support Self-Efficacy.** This guides practitioners to explicitly embrace the person's autonomy (even when persons choose to not change) and help the person move toward change successfully and with confidence. As persons are held responsible for choosing and carrying out actions to change, practitioners focus their efforts on helping people stay motivated, and supporting their sense of self-efficacy is a great way to do that.

Key points on Motivational Interviewing are:

- Motivation to change is elicited from the person and is not imposed from outside forces.
- It is the person's task, not the counselor's, to articulate and resolve his or her ambivalence.
- Direct persuasion is not an effective method for resolving ambivalence.
- The counseling style is generally quiet and elicits information from the person.
- The counselor is directive, in that they help the person to examine and resolve ambivalence.
- Readiness to change is not a trait of the person, but a fluctuating result of interpersonal interaction.
- The therapeutic relationship resembles a partnership or companionship.

Thus, motivational interviewing uses an ongoing conversation about life and change as a basis for engagement and encouragement.

APPENDIX O

Treat First Trial Client Check-In instruments

Purpose

A **Self Check-In** is conducted with the person at the beginning of each visit and a **Session Check-Out** is conducted at the end of each visit. Relative rating scale results are used by the practitioner to evaluate the client's perspective on how he/she are doing at the beginning of the session, and how useful and beneficial the session has been in making progress towards achieving the person's desired future

How to use

The following instruments will be loaded on a web-based data collection application for each practitioner's use with clients in the Treat First trial. At the beginning and end of the first 4 visits, complete the questions with each client identified for participation in the trial. It is recommended that the practitioner invite the client to enter their responses directly into the computer themselves. If it is deemed necessary, the practitioner can assist the client by reading the questions or entering their responses. A simple graph will be generated after the data are entered.

In addition to providing the client opportunity for input into their work towards their identified goals, these tools can also be beneficial to the practitioner by prompting discussion around the client's assessment of either their wellbeing or the session itself. This can help the client clarify or hone in on their identified goals, as well as providing the practitioner with real-time feedback that can further improve the focus of future sessions.

Adult Self Check-In and Session Check-Out Instruments

Self Check-In (at the beginning of the visit)

Introduction: *Looking back over the last week, including today, let me know how you have been doing by rating things on a scale of 1 to 10. A "1" would be not very well and a "10" would be very well.*

SELF CHECK-IN

- | | |
|--|---|
| 1. How would you rate how you are doing today? | 1.....2.....3.....4.....5.....6.....7.....8.....9.....10
Very Low Very High |

Child/Youth Self-In and Session Check-Out Instruments

Self Check-In (at the beginning of the visit)

Introduction: How are you doing? How are things going in your life? Circle a number on the scale to let us know. The closer to the smiley face, the better things are. The closer to the frowny face, things are not so good. *If you are a care giver filling out this form, please fill out according to how you think the child is doing.*

SELF CHECK-IN

- | | | | |
|---|---------------------------|---|---|
| 1. How am I doing today? | 1.....2.....3.....4.....5 |  |  |
| 2. How are things going in my family right now? | 1.....2.....3.....4.....5 |  |  |
| 3. How are things going at school? | 1.....2.....3.....4.....5 |  |  |
| 4. How is everything going | 1.....2.....3.....4.....5 |  |  |

Session Check-Out (at the end of the visit)

Introduction: *How was our time together today? Circle the number below to let us know how you feel.*

Listening

- | | | | | |
|-----------------------------|---------------------------|---|---|------------------------|
| Did not listen to me today. | 1.....2.....3.....4.....5 |  |  | Did Listen to me Today |
|-----------------------------|---------------------------|---|---|------------------------|

What I want

- | | | | | |
|---|---------------------------|---|---|------------------------------------|
| We did not talk about what I wanted to. | 1.....2.....3.....4.....5 |  |  | We did talk about what I wanted to |
|---|---------------------------|---|---|------------------------------------|

What We did Today

- | | | | | |
|----------------------------------|---------------------------|---|---|---------------------------|
| I did not like what we did today | 1.....2.....3.....4.....5 |  |  | I liked what we did today |
|----------------------------------|---------------------------|---|---|---------------------------|

Next Time

- | | | | | |
|---|---------------------------|---|---|--|
| Next time, I wish we could do something different | 1.....2.....3.....4.....5 |  |  | Next time I'd like to do the same kind of things |
|---|---------------------------|---|---|--|

Today was our final session. Yes___No___

We have scheduled a follow-up session Yes___No_

Clinical Screen

Over the last two weeks, how often have you been bothered by any of the following problems?
(please check your answer and circle the boxes that apply to you)

	Not at all	Several days	More than half the days	Nearly every day
Little interest or pleasure in doing things	0	1	2	3
Felling down, depressed, or hopeless	0	1	2	3
<input type="checkbox"/> Thoughts that you would be better off dead or, <input type="checkbox"/> Hurting yourself in some way	0	1	2	3
Feeling nervous, anxious, or on edge	0	1	2	3
Not being able to stop or control worrying	0	1	2	3

Drinking alcohol can affect your health. This is especially important if you take certain medications. We want to help you stay healthy and lower your risk for the problems that can be caused by drinking.

Standard serving of one drink:
12 ounces of beer or wine cooler
1.5 ounces of 80 proof liquor
5 ounces of wine
4 ounces of brandy, liqueur or aperitif

Please circle your answer

How often do you have one drink containing alcohol?	Never	Monthly or less	2-4 times a month	2-3 times a week	4+ times a week
How many drinks containing alcohol do you have on a typical day when you are drinking?	1 or 2	3 or 4	5 or 6	7 to 9	10 or more
How often do you have four or more drinks on one occasion?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily

In your life, have you ever had any experience that was so frightening, horrible or upsetting that in the past month, you:

Have had nightmares about it or thought about it when you did not want to?	Yes	No
Tried hard not to think about it or went out of your way to avoid situations that reminded you of it?	Yes	No
Were constantly on guard, watchful, or easily startled?	Yes	No
Felt numb or detached from others, activities, or your surroundings?	Yes	No

Anxiety Screen					
Over the last two weeks, how often have you been bothered by any of the following problems? (please circle your answer)					
	Not at all	Several days	More than half the days	Nearly every day	
Feeling nervous, anxious, or on edge	0	1	2	3	
Not being able to stop or control worrying	0	1	2	3	
Worrying too much about different things	0	1	2	3	
Trouble relaxing	0	1	2	3	
Being so restless that it is hard to sit still	0	1	2	3	
Becoming easily annoyed or irritable	0	1	2	3	
Feeling afraid, as if something awful might happen	0	1	2	3	
Audit-10					
<p>Drinking alcohol can affect your health. This is especially important if you take certain medications. We want to help you stay healthy and lower your risk for the problems that can be caused by drinking.</p> <p>These questions are about your drinking habits. We've listed the serving size of one drink below.</p>					
Standard serving of one drink: 12 ounces of beer or wine cooler 1.5 ounces of 80 proof liquor 5 ounces of wine 4 ounces of brandy, liqueur or aperitif					
Please circle your answer					
How often do you have one drink containing alcohol?	Never	Monthly or less	2-4 times a month	2-3 times a week	4+ times a week
How many drinks containing alcohol do you have on a typical day when you are drinking?	1 or 2	3 or 4	5 or 6	7 to 9	10 or more
How often do you have four or more drinks on one occasion?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
How often during the last year have you...					
found that you were not able to stop drinking once you had started?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
failed to do what was normally expected from you because of drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
needed a first drink in the morning to get yourself going after heavy drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
had a feeling of guilt or remorse after drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily

been unable to remember what happened the night before you had been drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
Have you or someone else been injured as a result of your drinking?	No	Yes, but not in the last year		Yes, during the last year	
Has a relative, friend, doctor, or health worker been concerned about your drinking or suggested you cut down?	No	Yes, but not in the last year		Yes, during the last year	
The Columbia Scale (C-SSRS)					
In the past month					
Have you wished you were dead or wished you could go to sleep and not wake up?	Yes		No		
Have you actually had any thoughts about killing yourself?	Yes		No		
If you answered Yes to 2, answer 3,4,5, and 6. If you answered No to 2, go directly to question 6.					
Have you thought about how you might do this?	Yes		No		
Have you had any intention of acting on these thoughts of killing yourself, as opposed to you have the thoughts but you definitely would not act on them?	Yes		No		
Have you started to work out or worked out details of how to kill yourself?	Yes		No		
Do you intend to carry out this plan?	Yes		No		
In the past 3 months					
Have you done anything, started to do anything, or prepared to do anything to end your life? <i>Examples: Collected pills, obtained a gun, given away valuables, wrote a will or suicide note, took put pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc.</i>	Yes		No		
In your entire lifetime, how many times have you done any of these things?					
Depression Survey					
Over the last two weeks, how often have you been bothered by any of the following problems? (please check your answer and <u>circle the boxes that apply to you</u>)					
	Not at all	Several days	More than half the days	Nearly every day	
Little interest or pleasure in doing things	0	1	2	3	
Feeling down, depressed, or hopeless	0	1	2	3	
<input type="checkbox"/> Trouble falling or staying asleep or, <input type="checkbox"/> Sleeping too much	0	1	2	3	
Feeling tired or having little energy	0	1	2	3	
<input type="checkbox"/> Poor appetite or, <input type="checkbox"/> Overeating	0	1	2	3	

	Not at all	Several days	More than half the days	Nearly every day
Feeling bad about yourself, or that you are a failure or have let yourself or your family down	0	1	2	3
Trouble concentrating on things, such as reading the newspaper or watching television	0	1	2	3
<input type="checkbox"/> Moving or speaking so slowly that other people could have noticed or, <input type="checkbox"/> The opposite-being so fidgety or restless that you've been moving around a lot more than usual	0	1	2	3
<input type="checkbox"/> Thoughts that you would be better off dead or, <input type="checkbox"/> Hurting yourself in some way	0	1	2	3

APPENDIX Q

Clinical Screen

Over the last two weeks, how often have you been bothered by any of the following problems?
(please check your answer and circle the boxes that apply to you)

	Not at all	Several days	More than half the days	Nearly every day
Little interest or pleasure in doing things	0	1	2	3
Felling down, depressed, or hopeless	0	1	2	3
<input type="checkbox"/> Thoughts that you would be better off dead or, <input type="checkbox"/> Hurting yourself in some way	0	1	2	3
Feeling nervous, anxious, or on edge	0	1	2	3
Not being able to stop or control worrying	0	1	2	3

Drinking alcohol can affect your health. This is especially important if you take certain medications. We want to help you stay healthy and lower your risk for the problems that can be caused by drinking.

Standard serving of one drink:

12 ounces of beer or wine cooler

1.5 ounces of 80 proof liquor

5 ounces of wine

4 ounces of brandy, liqueur or aperitif

Please circle your answer

How often do you have one drink containing alcohol?	Never	Monthly or less	2-4 times a month	2-3 times a week	4+ times a week
How many drinks containing alcohol do you have on a typical day when you are drinking?	1 or 2	3 or 4	5 or 6	7 to 9	10 or more
How often do you have four or more drinks on one occasion?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily

In your life, have you ever had any experience that was so frightening, horrible or upsetting that in the past month, you:

Have had nightmares about it or thought about it when you did not want to?	Yes	No
Tried hard not to think about it or went out of your way to avoid situations that reminded you of it?	Yes	No
Were constantly on guard, watchful, or easily startled?	Yes	No
Felt numb or detached from others, activities, or your surroundings?	Yes	No

Anxiety Screen					
Over the last two weeks, how often have you been bothered by any of the following problems? (please circle your answer)					
	Not at all	Several days	More than half the days	Nearly every day	
Feeling nervous, anxious, or on edge	0	1	2	3	
Not being able to stop or control worrying	0	1	2	3	
Worrying too much about different things	0	1	2	3	
Trouble relaxing	0	1	2	3	
Being so restless that it is hard to sit still	0	1	2	3	
Becoming easily annoyed or irritable	0	1	2	3	
Feeling afraid, as if something awful might happen	0	1	2	3	
Audit-10					
<p>Drinking alcohol can affect your health. This is especially important if you take certain medications. We want to help you stay healthy and lower your risk for the problems that can be caused by drinking.</p> <p>These questions are about your drinking habits. We've listed the serving size of one drink below.</p>					
<p>Standard serving of one drink: 12 ounces of beer or wine cooler 1.5 ounces of 80 proof liquor 5 ounces of wine 4 ounces of brandy, liqueur or aperitif</p>					
					
Please circle your answer					
How often do you have one drink containing alcohol?	Never	Monthly or less	2-4 times a month	2-3 times a week	4+ times a week
How many drinks containing alcohol do you have on a typical day when you are drinking?	1 or 2	3 or 4	5 or 6	7 to 9	10 or more
How often do you have four or more drinks on one occasion?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
How often during the last year have you...					
found that you were not able to stop drinking once you had started?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
failed to do what was normally expected from you because of drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
needed a first drink in the morning to get yourself going after heavy drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
had a feeling of guilt or remorse after drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily
been unable to remember what happened the night before you had been drinking?	Never	Less than monthly	Monthly	Weekly	Daily or almost daily

Have you or someone else been injured as a result of your drinking?	No	Yes, but not in the last year	Yes, during the last year	
Has a relative, friend, doctor, or health worker been concerned about your drinking or suggested you cut down?	No	Yes, but not in the last year	Yes, during the last year	
The Columbia Scale (C-SSRS)				
In the past month				
Have you wished you were dead or wished you could go to sleep and not wake up?	Yes	No		
Have you actually had any thoughts about killing yourself?	Yes	No		
If you answered Yes to the question above, answer the next 3 questions. If you answered No to 2, go directly to the In the past 3 months question.				
Have you thought about how you might do this?	Yes	No		
Have you had any intention of acting on these thoughts of killing yourself, as opposed to you have the thoughts but you definitely would not act on them?	Yes	No		
Have you started to work out or worked out details of how to kill yourself?	Yes	No		
Do you intent to carry out this plan?	Yes	No		
In the past 3 months				
Have you done anything, started to do anything, or prepared to do anything to end your life? <i>Examples: Collected pills, obtained a gun, given away valuables, wrote a will or suicide note, took put pills but didn't swallow any, held a gun but changed your mind or it was grabbed from your hand, went to the roof but didn't jump; or actually took pills, tried to shoot yourself, cut yourself, tried to hang yourself, etc.</i>	Yes	No		
In your entire lifetime, how many times have you done any of these things?				
Depression Survey				
Over the last two weeks, how often have you been bothered by any of the following problems? (please check your answer and <u>circle the boxes that apply to you</u>)				
	Not at all	Several days	More than half the days	Nearly every day
Little interest or pleasure in doing things	0	1	2	3
Feeling down, depressed, or hopeless	0	1	2	3
<input type="checkbox"/> Trouble falling or staying asleep or, <input type="checkbox"/> Sleeping too much	0	1	2	3
Feeling tired or having little energy	0	1	2	3
<input type="checkbox"/> Poor appetite or, <input type="checkbox"/> Overeating	0	1	2	3
Feeling bad about yourself, or that you are a failure or have let yourself or your family down	0	1	2	3
Trouble concentrating on things, such as reading the newspaper or watching television	0	1	2	3

	Not at all	Several days	More than half the days	Nearly every day
<input type="checkbox"/> Moving or speaking so slowly that other people could have noticed or, <input type="checkbox"/> The opposite-being so fidgety or restless that you've been moving around a lot more than usual	0	1	2	3
<input type="checkbox"/> Thoughts that you would be better off dead or, <input type="checkbox"/> Hurting yourself in some way	0	1	2	3

INTENSIVE OUTPATIENT PROGRAM CERTIFICATION INFORMATION

Service Description:

Intensive Outpatient Program services provide a time-limited, multi-faceted approach to treatment for eligible recipients who require structure and support to achieve and sustain recovery. The IOP model is based on research and evidence-based interventions that target specific behaviors with individualized behavioral interventions.

Services are culturally-sensitive and incorporate recovery and resiliency values into all service interventions. Services address co-occurring mental health disorders, as well as substance use disorders, when indicated. Treatment is provided through an integrated multi-disciplinary team and services. Core services include individual therapy, group therapy (membership to not exceed 15 in number) and psycho-education to the recipient and his/her family.

The duration of IOP treatment services is typically three to six months; the amount of weekly services is dependent upon the goals and objectives outlined in the recipient's treatment plan. Medication management may be part of the Intensive Outpatient Program.

PLEASE REFER TO MEDICAID REGULATIONS TITLE 8 SOCIAL SERVICES, CHAPTER 321.2 HEALTH CARE PROFESSIONAL SERVICES, PART 17 INTENSIVE OUTPATIENT PROGRAM SERVICES for further information.

Purpose of application/certification & attestation:

The intent of the Behavioral Health Service Division IOP application process is to insure that all requirements under Medicaid regulations are met for clinical provision of this level of service. Particular focus is on fidelity to the model, program evaluation, clinical supervision, and clinical service provision to program recipients.

Process:

The agency must be a Medicaid approved provider and meet the criteria for agency/facility type as listed on the application page of this packet.

1. The agency will complete the application for Intensive Outpatient Program form and the IOP Provider Attestation Statement.
2. The provider will review and submit all documents requested in the IOP Certification Tool to: hsd.csbhdsd@state.nm.us – **subject line IOP**. Upon receipt of the application and requested documents, the packet will be assigned for review and acknowledgment of receipt will be sent to the provider via email.

3. The provider will be contacted by the BHSD reviewer with further questions or requests for information.
4. Once the packet has passed all requirements, the provider will be notified of the proposed site visit date.
5. Once the site visit is complete and all documents are in order, a letter of clinical certification will be provided and sent to the Medicaid Assistance Division.

Additional requirements:

All providers rendering services for Medicaid eligible recipients must have acquired a Medicaid ID through Conduent/MAD enrollment process and have an active NPI number through the National Plan & Provider enumeration System (NPPES).

Intensive Outpatient Program Approval Process February 2018

INTENSIVE OUTPATIENT CERTIFICATION TOOL

		P	F	Provider Response	BHSD Finding
1	Provide a complete roster of IOP clinical supervisor(s) and program staff along with program organization chart.				
2	Provide IOP clinical supervisor and program staff job descriptions.				
3	Provide verification that clinical supervisor(s) meets licensing board standards and IOP requirements to deliver clinical supervision. Documentation of 1 year supervision experience and 2 years IOP experience prior to becoming IOP clinical supervisor. Documentation as MAD approved provider.				
4	Provide copies of agency employee performance evaluation tool and the clinical supervision form.				
5	Provide program treatment schedule(s)/ calendar(s), if applicable for EBP.				
6	Provide copy of treatment plan form.				
7	Provide copy of program evaluation form.				

		P	F	Provider Response	BHSD Finding
8	Provide copy of psycho-social assessment/diagnostic evaluation form.				
9	Provide copy of medication form if applicable.				
<i>Client treatment program</i>					
10	Provide policy and procedure that outlines how clients are assessed for eligibility.				
11	Provide policy and procedure that outlines the treatment planning process including discharge planning. Include guidelines that clearly specify how treatment planning is related to clients' goals and objectives. Specify the process for evaluating time-limited services. Discuss how 90-day treatment plan review will occur.				
12	Provide policy and procedure that outlines how the provision and integration of mental health and substance abuse services are managed to include co-occurring disorders. Include in this policy how IOP will integrate with other services at the agency.				
13	Provide policy(ies) and procedure that support recovery and resiliency values, cultural sensitivity, gender informed care, and trauma-informed				

	practices.

INTENSIVE OUTPATIENT PROGRAM (IOP) PROVIDER ATTESTATION STATEMENT

(Name of the agency) agrees to abide by the following requirements for certification as an IOP Provider.

- An Intensive Outpatient Program (IOP) provides a time-limited, multi-faceted approach to treatment service for individuals who require structure and support to achieve and sustain recovery.
- IOP services are provided through an integrated multi-disciplinary approach includes staff expertise in both addiction and mental health treatment.
- IOP should address substance use disorders as well as co-occurring mental health disorders when indicated.
- IOP Services are provided to children, age 13-17 who have been diagnosed with a substance abuse disorder or with a co-occurring disorder (mental illness and substance abuse); or, meet the American Society of Addiction Medicine (ASAM) patient placement criteria for Level 2.1.
- IOP Services utilize Evidence-Based Practice (EBPs) models only and will insure fidelity to that standard with evidence that supports it success in IOP.
- IOP Services reflect cultural sensitivity and a trauma-informed approach and provides the policy and procedures demonstrating how that is implemented.
- IOP Services are delivered by a multi-disciplinary team.
- IOP Services comply with the definition of Intensive Outpatient Services per SAMSHA and State of New Mexico Medicaid guidelines.
- IOP Services are delivered by appropriately trained and credentialed professionals who have specialized skills in the EBP model being utilized and who meet licensure requirements including scope of practice per state licensing. Documentation demonstrates appropriate training and certification.
- The IOP Clinical Supervisor meets all of the requirements in accordance with licensing board regulations as defined in Medicaid regulation 8.310.15.10, Section E.

- The agency has an IOP evaluation system in place and provides evidence of same.
- The agency has and maintains the appropriate state facility licensure (DOH, CYFD) as applicable.
- All prospective clients will have a treatment file from an appropriate practitioner or agency that contains at least a diagnostic evaluation and an individualized treatment plan that includes IOP as an intervention.
- All current clients have the required standard documentation for outpatient services according to NMAC 8.321.2.
- The agency will comply with the New Mexico Children’s Mental Health Code statutes related to Mandatory Child Abuse and Neglect reporting by all certified Child/Youth CCSS providers and all Children’s Rights and age-specific Consent for Services statutes.
- Any agency serving adolescents will complete CYFD approved background checks on all employees.

My signature below verifies agreement with all of the requirements detailed in this attestation and I further understand that failure to comply with these may lead to sanction and recoument of funding.

SUD-IOP Client File Tool

Item	Assessment Criteria	Yes	No	Comments
Treatment Agreements				
Rule C	1. Is there evidence that Releases of Information specific to treatment needs are in the record where appropriate?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	2. Is there evidence of signed Client rights and grievance procedures that include the Single Entity's and Fee-For-Service (FFS) rights for fair hearings?	<input type="checkbox"/>	<input type="checkbox"/>	
Assessment Requirements				
Rule A	1. Is there evidence that each client has been diagnosed with substance abuse disorders or with co-occurring disorders, meets the eligibility criterion of ASAM level 2.1 services IOP services, and has an assessment or diagnostic evaluation as approved by the Medical Assistance Division that is current, (within 12 months) completed, signed and dated by a licensed clinician under the supervision of a licensed independent clinician?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	2. Is there evidence that the client's culture and values were incorporated into assessment and treatment?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	3. Is there evidence that co-occurring disorders are assessed for and addressed?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	4. Does the evaluation contain an integrated summary describing the interrelated effects of the disorder dynamic, and/or an understanding of co-occurring disorders?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule E	5. Is there evidence of appropriate assessment for medication, medication management, or referral and follow up for these services?	<input type="checkbox"/>	<input type="checkbox"/>	
Service Plan Requirements				
Rule A	1. Is there evidence that the level of care is specified in the individualized service plan? This should include domains of service that were identified in the assessment/diagnostic evaluation appropriate to IOP services?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	2. Is there evidence that the Individual service plan will address all issues identified in the assessment/diagnostic evaluation appropriate to IOP services?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	3. Is there evidence that all other domains of service identified in the assessment/evaluation have been addressed in the service plan?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	4. Is there evidence of specific goals/interventions/outcomes for each of the identified problems in the assessment/evaluation?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	5. Does the service plan display evidence of fidelity to the chosen EBP?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	6. Is there evidence of a relapse prevention and/or crisis plan (may be the same document)?	<input type="checkbox"/>	<input type="checkbox"/>	
Discharge Plan Requirements				
Is there evidence of Discharge Planning that is:				
Rule D	1. Developed at the start of services and is updated as necessary to reflect the growth and needs of the consumer?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	2. Consistent with the treatment plan updates and progress made by the consumer?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule D	3. Includes family and community support and collaboration?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	4. Reflects the developmental level and any unique circumstances for that consumer to continue in recovery?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	5. Includes concrete steps that support the consumer in recovery?	<input type="checkbox"/>	<input type="checkbox"/>	
Treatment Schedule				
Rule E	1. Is there a treatment schedule/attendance document?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	2. Is there evidence that the time of service each week aligns with the recommended EBP service intensity specific to client needs and capability as documented assessment or diagnostic evaluation.	<input type="checkbox"/>	<input type="checkbox"/>	
Treatment Progress Documentation Requirements				
Rule E	1. Is there evidence of progress notes for each treatment session including: <ul style="list-style-type: none"> • Group Counseling • Individual counseling • Psycho-educational groups 	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	2. Do the notes and service plan display evidence of fidelity to the chosen EBP?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	3. Is there evidence of MDT feedback in the client record?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	4. Are appropriate documents signed by client and/or clinician?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	5. If applicable are urinalysis and/or Breathalyzer results documented in client file?	<input type="checkbox"/>	<input type="checkbox"/>	

New Mexico Administrative Code (NMAC 8.321.2.25) Program Rules applicable to this tool:**Rule A:**

(1) IOP services are provided to an eligible recipient 11 through 17 years of age diagnosed with substance abuse disorder or with co-occurring disorders (mental illness and substance abuse) or that meet the American society of addiction medicine (ASAM) patient placement criteria for level 2.1 - intensive outpatient treatment; or have been mandated by the local judicial system as an option of least restrictive level of care. Services are not covered if the recipient is in detention or incarceration. See eligibility rules 8.200.410.17 NMAC.

(2) IOP services are provided to an eligible recipient of a transitional age in a transitional age program of which the age range has been determined by the agency, and that have been diagnosed with substance abuse disorder or with co-occurring disorders (mental illness and substance abuse) or that meet the American society of addiction medicine's (ASAM) patient placement criteria for level 2.1 - intensive outpatient treatment, or have been mandated by the local judicial system as an option of least restrictive level of care.

(3) IOP services are provided to an eligible adult recipient 18 years of age and older diagnosed with substance abuse disorders or co-occurring disorders (mental illness and substance abuse) that meet the American society of addiction medicine's (ASAM) patient placement criteria for level 2.1 - intensive outpatient treatment or have been mandated by the local judicial system as an option of least restrictive level of care. (8.321.2.25 – D)

Rule B: An IOP is based on research and evidence-based practice models (EBP) that target specific behaviors with individualized behavioral interventions. All EBP services must be culturally sensitive and incorporate recovery and resiliency values into all service interventions. EBPs must be approved by the IOP interdepartmental council. (8.321.2.25 - B)

Rule C: Prior to engaging in a MAD IOP program, the eligible recipient must have a treatment file containing: (a) one diagnostic evaluation with a diagnosis of substance use disorder; and (b) one individualized treatment service plan that includes IOP as an intervention. (8.321.2.25 – D-4)

Rule D: Documents that must be provided by agency if applying for enrollment as an IOP agency requesting approval from MAD.

Rule E:

(1) IOP core services include: (a) individual therapy; (b) group therapy (group membership may not exceed 15 in number); and (c) psycho-education for the eligible recipient and his or her family.

(2) Co-occurring mental health and substance use disorders: The IOP agency must accommodate the needs of an eligible recipient with co-occurring substance use and mental health disorders. Treatment services are provided through an integrated interdisciplinary team and through coordinated, concurrent services with MAD behavioral health providers.

(3) Medication management services are available either in the IOP agency or by referral to oversee the use of psychotropic medications and medication assisted treatment of substance use disorders.

(4) The duration of an eligible recipient's IOP intervention is typically three to six months. The amount of weekly services per eligible recipient is directly related to the goals specified in his or her IOP treatment plan and the IOP EBP in use. (8.321.2.25 – C)

Documentation of Training Required for ALL Programmatic IOP Staff Members				
Is there evidence of training in the following areas:				
Rule B	1. EBP fidelity and compliance?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule C	2. Both mental health and substance use disorder treatment?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	3. How to hand disruptive and unruly client behavior?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	4. Recovery and resiliency values?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	5. Cultural competency?	<input type="checkbox"/>	<input type="checkbox"/>	
Documentation of Training Required for ALL Clinical IOP Staff Members				
Rule C	1. Do IOP clinicians have education, formal training, or staff development specific to co-occurring disorders?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	2. Are IOP clinicians are trained in EBP IOP curriculum in compliance with State of NM MAD Rule?	<input type="checkbox"/>	<input type="checkbox"/>	

New Mexico Administrative Code (NMAC 8.321.2.25) Program Rules applicable to this tool:

Rule A: Each IOP program must have a clinical supervisor. Both clinical services and supervision by licensed practitioners must be conducted in accordance with respective licensing board regulations. An IOP clinical supervisor must meet all the following requirements: (a) be licensed as a MAD approved independent practitioner; see Subsection C of 8.321.2.9 NMAC; (b) have two years relevant experience with an IOP program or approved exception by the interdepartmental council; (c) have one year demonstrated supervisory experience; and (d) have expertise in both mental health and substance abuse treatment (8.321.2.25 A-3)

Rule B: An IOP is based on research and evidence-based practice (EBP) models that target specific behaviors with individualized behavioral interventions. All EBP services must be culturally sensitive and incorporate recovery and resiliency values into all service interventions. (8.321.2.25 B-1)

Rule C: IOP services are provided through an integrated interdisciplinary approach including staff expertise in both addiction and mental health treatment. This team may have services rendered by non-independent practitioners under the direction of the IOP supervisor including LMSW, LMHC, LADAC, CADAC, LSAA, and a master's level psych associates. (8.321.2.25 A-2)

Rule D: The IOP agency is required to develop and implement a program outcome evaluation system. (8.321.2.25 A-4)

SUD-IOP Quality Assurance Tool

Item	Assessment Criteria	Yes	No	Comments
Rule B	1. Is there evidence that the provider utilizes a IOP-specific approved EBP?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	2. Does the provider have an IOP-specific program evaluation or quality management process?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	3. Can the Clinical Director describe and show you how the IOP program will track fidelity to the model?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	4. Are there quality management meetings that are regularly scheduled?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	5. Can the provider describe how the IOP-specific program evaluation system will be used to track and/or evaluate client outcomes? (There may be customer satisfaction surveys, retention into service rates, drop-out rates, re-admittance/relapse and lapse rates, incarceration or hospitalization data, or readily identifiable information and data specific to the IOP that may be contained in the quality management reports.)	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	6. Can the provider describe how program success will be measured, such as demographics of recipients served; effects on the utilization of criminal justice system by enrolled recipients; changes in recipient employment; numbers and reasons why recipients did not complete IOP program?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule A	7. Can the director describe how this information will be internally analyzed concerning recipient program satisfaction and their beliefs of the effectiveness of their services?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule A	8. Can the director describe how this information will be implemented by agency?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	9. Does the provider have documentation that the agency has a plan to match linguistic facility to the needs of the community served when appropriate?	<input type="checkbox"/>	<input type="checkbox"/>	

New Mexico Administrative Code (NMAC 8.321.2.25) Program Rules applicable to this tool:

Rule A: IOP providers are required to develop and implement a program evaluation system. (8.321.2.25 A-4)

Rule B: An IOP is based on research and evidence-based practice models (EBP) that target specific behaviors with individualized behavioral interventions. All EBP services must be culturally sensitive and incorporate recovery and resiliency values into all service interventions. (8.321.2.25 B-1)

Agency Name: _____

Physical Address: _____
City State Zip

IOP Services are Provided to: (NMAC 8.321.2.26 Identified Population)

- Adults, age 18 and over:** IOP services are provided to an eligible adult recipient 18 years of age and older diagnosed with a SMI.
 - Youth in Transition,** ages 18-21 years
- Youth, 13-17 years:** IOP services are provided to an eligible recipient, 11 through 17 years of age diagnosed with a SED.

This Agency is a:

- Community Mental Health Center (CMHC)
- Federally Qualified Health Center (FQHC)
- Indian Health Services (IHS) Facility
- PL.93-638 Tribal Facility
- MAD CSA
- CLNM health home
- Behavioral health agency with a BHSD supervisory certificate (BHA 432)

MH-IOP Client File Tool

Item	Assessment Criteria	Yes	No	Comments
Treatment Agreements				
Rule C	1. Is there evidence that Releases of Information specific to treatment needs are in the record where appropriate?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	2. Is there evidence of signed client rights and grievance procedures that include the Single Entity's and Fee-For-Service (FFS) rights for fair hearings?	<input type="checkbox"/>	<input type="checkbox"/>	
Assessment Requirements				
Rule A	1. Is there evidence that each client meets the eligibility criterion of a SMI or SED diagnosis and has an assessment or diagnostic evaluation as approved by the Medical Assistance Division that is current (within 12 months), completed, signed and dated by a licensed clinician under the supervision of a licensed independent clinician?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	2. Is there evidence that the client's culture and values were incorporated into assessment and treatment?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	3. Is there evidence that co-occurring disorders are assessed for and addressed?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	4. Does the evaluation contain an integrated summary describing the interrelated effects of the disorder dynamic, and/or an understanding of SMI/SED?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule E	5. Is there evidence of appropriate assessment for medication, medication management, or referral and follow up for these services?	<input type="checkbox"/>	<input type="checkbox"/>	
Service Plan Requirements				
Rule A	1. Is there evidence that the level of care is specified in the individualized service plan? This should include domains of service that were identified in the assessment/diagnostic evaluation appropriate to MH-IOP services.	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	2. Is there evidence that the individual service plan will address all issues identified in the assessment/diagnostic evaluation appropriate to MH-IOP services?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	3. Is there evidence that all other domains of service identified in the assessment/evaluation have been addressed in the service plan?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	4. Is there evidence of specific goals/interventions/outcomes for each of the identified problems in the assessment/evaluation?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	5. Does the service plan display evidence of fidelity to the chosen EBP?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule C	6. Is there evidence of a relapse prevention and/or crisis plan (may be the same document)?	<input type="checkbox"/>	<input type="checkbox"/>	
Discharge Plan Requirements				
Is there evidence of Discharge Planning that is:				
Rule D	1. Developed at the start of services and is updated as necessary to reflect the growth and needs of the consumer?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	2. Consistent with the treatment plan updates and progress made by the consumer?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	3. Includes family and community support and collaboration?	<input type="checkbox"/>	<input type="checkbox"/>	

Rule D	4. Reflects the developmental level and any unique circumstances for that consumer to continue in recovery?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	5. Includes concrete steps that support the consumer in recovery and/or the improvement of their mental health symptoms?	<input type="checkbox"/>	<input type="checkbox"/>	
Treatment Schedule				
Rule E	1. Is there a treatment schedule/attendance document?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	2. Is there evidence that the time of service each week aligns with the recommended EBP service intensity specific to client needs and capability as documented assessment or diagnostic evaluation.	<input type="checkbox"/>	<input type="checkbox"/>	
Treatment Progress Documentation Requirements				
Rule E	1. Is there evidence of progress notes for each treatment session including: <ul style="list-style-type: none"> • Group Counseling • Individual counseling • Psycho-educational groups 	<input type="checkbox"/>	<input type="checkbox"/>	
Rule B	2. Do the notes and service plan display evidence of fidelity to the chosen EBP?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule E	3. Is there evidence of MDT feedback in the client record?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	4. Are appropriate documents signed by client and/or clinician?	<input type="checkbox"/>	<input type="checkbox"/>	
Rule D	5. If applicable are urinalysis and/or breathalyzer results documented in client file?	<input type="checkbox"/>	<input type="checkbox"/>	

New Mexico Administrative Code (NMAC 8.321.2.26) Program Rules applicable to this tool:**Rule A:**

- 1) IOP services are provided to an eligible recipient, 11 through 17 years of age diagnosed with a SED.
- 2) IOP services are provided to an eligible adult recipient 18 years of age and older diagnosed with a SMI. (8.321.2.26 – D)

Rule B: An IOP is based on research and evidence-based practice (EBP) models that target specific behaviors with individualized behavioral interventions. All EBP services must be culturally sensitive and incorporate recovery and resiliency values into all service interventions. EBPs must be approved by the IOP interdepartmental council. (8.321.2.26 - B)

Rule C: Prior to engaging in a MAD IOP program, the eligible recipient must have a treatment file containing: (a) one diagnostic evaluation with a diagnosis of serious mental illness or severe emotional disturbance; or diagnosis for which the IOP is approved; and (b) one individualized service plan that includes IOP as an intervention. (8.321.2.26 - D.3)

Rule D: Documents that must be provided by agency if applying for enrollment as an IOP agency requesting approval from MAD.

Rule E:

- (1) IOP core services include: (a) individual therapy; (b) group therapy (group membership may not exceed 15 in number); and (c) psycho-education for the eligible recipient and his or her family.
- (2) Medication management services are available either in the IOP agency or by referral to oversee the use of psychotropic medications and medication assisted treatment of substance use disorders.
- (3) The amount of weekly services per eligible recipient is directly related to the goals specified in his or her IOP treatment plan and the IOP EBP in use.
- (4) Treatment services must address co-occurring disorders when indicated. (8.321.2.25 - C)

	1	2	3	4	5
<p>G1. Program Philosophy. The program is committed to a clearly articulated philosophy consistent with the specific evidence-based model, based on the following 5 sources:</p> <ul style="list-style-type: none"> • Program leader • Senior staff (e.g., executive director, psychiatrist) • Practitioners providing the EBP • Clients and/or families receiving EBP • Written materials (e.g., brochures) 	<p>No more than 1 of the 5 sources shows clear understanding of the program philosophy OR All sources have numerous major areas of discrepancy</p>	<p>2 of the 5 sources show clear understanding of the program philosophy OR All sources have several major areas of discrepancy</p>	<p>3 of the 5 sources show clear understanding of the program philosophy OR Sources mostly aligned to program philosophy, but have one major area of discrepancy</p>	<p>4 of the 5 sources show clear understanding of the program philosophy OR Sources mostly aligned to program philosophy, but have one or two minor areas of discrepancy</p>	<p>All 5 sources display a clear understanding and commitment to the program philosophy for the specific EBP</p>
<p>*G2. Eligibility/Client Identification. All clients with severe mental illness in the community support program, crisis clients, and institutionalized clients are screened to determine whether they qualify for the EBP using standardized tools or admission criteria consistent with the EBP. Also, the agency tracks the number of eligible clients in a systematic fashion.</p>	<p>≤20% of clients receive standardized screening and/or agency DOES NOT systematically track eligibility</p>	<p>21%-40% of clients receive standardized screening and agency systematically tracks eligibility</p>	<p>41%-60% of clients receive standardized screening and agency systematically tracks eligibility</p>	<p>61%-80% of clients receive standardized screening and agency systematically tracks eligibility</p>	<p>>80% of clients receive standardized screening and agency systematically tracks eligibility</p>
<p>*G3. Penetration. The maximum number of eligible clients are served by the EBP, as defined by the ratio: # clients receiving EBP # clients eligible for EBP</p>	<p>Ratio ≤ .20</p>	<p>Ratio between .21 and .40</p>	<p>Ratio between .41 and .60</p>	<p>Ratio between .61 and .80</p>	<p>Ratio > .80</p>

*These two items coded based on all clients with SMI at the site or sites where the EBP is being implemented; all other items refer specifically to those receiving the EBP.

Total # clients in target population

_____ Total # clients eligible for EBP % eligible: _____%

_____ Total # clients receiving EBP Penetration rate: _____

General Organizational Index (GOI)

	1	2	3	4	5
<p>G4. Assessment. Full standardized assessment of all clients who receive EBP services. Assessment includes history and treatment of medical/psychiatric/substance use disorders, current stages of all existing disorders, vocational history, any existing support network, and evaluation of biopsychosocial risk factors</p>	<p>Assessments are completely absent or completely nonstandardized</p>	<p>Pervasive deficiencies in two of the following: Standardization, Quality of assessments, Timeliness, Comprehensiveness</p>	<p>Pervasive deficiencies in one of the following: Standardization, Quality of assessments, Timeliness, Comprehensiveness</p>	<p>61%-80% of clients receive standardized, high quality assessments at least annually OR Information is deficient for one or two assessment domains</p>	<p>>80% of clients receive standardized, high quality assessments, the information is comprehensive across all assessment domains, and updated at least annually</p>
<p>G5. Individualized Treatment Plan. For all EBP clients, there is an explicit, individualized treatment plan <i>related to the EBP</i> that is consistent with assessment and updated every 3 months.</p>	<p>≤20% of clients served by EBP have an explicit individualized treatment plan, <i>related to the EBP</i>, updated every 3 mos.</p>	<p>21%-40% of clients served by EBP have an explicit individualized treatment plan, <i>related to the EBP</i>, updated every 3 mos.</p>	<p>41%-60% of clients served by EBP have an explicit individualized treatment plan, <i>related to the EBP</i>, updated every 3 mos. OR Individualized treatment plan is updated every 6 mos. for all clients</p>	<p>61%-80% of clients served by EBP have an explicit individualized treatment plan, <i>related to the EBP</i>, updated every 3 mos.</p>	<p>>80% of clients served by EBP have an explicit individualized treatment plan <i>related to the EBP</i>, updated every 3 mos.</p>
<p>G6. Individualized Treatment. All EBP clients receive individualized treatment meeting the goals of the EBP.</p>	<p>≤20% of clients served by EBP receive individualized services meeting the goals of the EBP</p>	<p>21%-40% of clients served by EBP receive individualized services meeting the goals of the EBP</p>	<p>41%-60% of clients served by EBP receive individualized services meeting the goals of the EBP</p>	<p>61% - 80% of clients served by EBP receive individualized services meeting the goals of the EBP</p>	<p>>80% of clients served by EBP receive individualized services meeting the goals of the EBP</p>

General Organizational Index (GOI)

	1	2	3	4	5
<p>G7. Training. All new practitioners receive standardized training in the EBP (at least a 2-day workshop or its equivalent) <i>within 2 months of hiring</i>. Existing practitioners receive annual refresher training (at least 1-day workshop or its equivalent).</p>	<p>≤20% of practitioners receive standardized training annually</p>	<p>21%-40% of practitioners receive standardized training annually</p>	<p>41%-60% of practitioners receive standardized training annually</p>	<p>61%-80% of practitioners receive standardized training annually</p>	<p>>80% of practitioners receive standardized training annually</p>
<p>G8. Supervision. EBP practitioners receive structured, weekly supervision (group or individual format) from a practitioner experienced in the particular EBP. The supervision should be client-centered and explicitly address the EBP model and its application <i>to specific client situations</i>.</p>	<p>≤20% of practitioners receive supervision</p>	<p>21% - 40% of practitioners receive weekly structured client centered supervision OR All EBP practitioners receive supervision on an informal basis</p>	<p>41%-60% of practitioners receive weekly structured client centered supervision OR All EBP practitioners receive supervision monthly</p>	<p>61%-80% of EBP practitioners receive weekly structured client centered supervision OR All EBP practitioners receive supervision twice a month</p>	<p>>80% of EBP practitioners receive structured weekly supervision, focusing on specific clients, in sessions <i>that explicitly address the EBP model and its application</i></p>
<p>G9. Process Monitoring. Supervisors and program leaders monitor the process of implementing the EBP every 6 months and use the data to improve the program. Monitoring involves a standardized approach, e.g., use of a fidelity scale or other comprehensive set of process indicators.</p>	<p>No attempt at monitoring process is made</p>	<p>Informal process monitoring is used at least annually</p>	<p>Process monitoring is deficient on 2 of these 3 criteria: (1) Comprehensive & standardized; (2) Completed every 6 mos.; (3) Used to guide program improvements OR Standardized monitoring done annually only</p>	<p>Process monitoring is deficient on one of these three criteria: (1) Comprehensive and standardized; (2) Completed every 6 months; (3) Used to guide program improvements</p>	<p>Standardized comprehensive process monitoring occurs at least every 6 mos. and is used to guide program improvements</p>

<p>G10. Outcome Monitoring. Supervisors/program leaders monitor the outcomes for EBP clients every 3 months and share the data with EBP practitioners. Monitoring involves a standardized approach to assessing a key outcome <i>related to the EBP</i>, e.g., psychiatric admissions, substance abuse treatment scale, or employment rate.</p>	No outcome monitoring occurs	Outcome monitoring occurs at least once a year, but results are not shared with practitioners	Standardized outcome monitoring occurs at least once a year and results are shared with practitioners	Standardized outcome monitoring occurs at least twice a year and results are shared with practitioners	Standardized outcome monitoring occurs quarterly and results are shared with EBP practitioners
<p>G11. Quality Assurance (QA). The agency has a QA Committee or implementation steering committee with an explicit plan to review the EBP, or components of the program, every 6 months.</p>	No review or no committee	QA committee has been formed, but no reviews have been completed	Explicit QA review occurs less than annually OR QA review is superficial	Explicit QA review occurs annually	Explicit review every 6 months by a QA group or steering committee for the EBP
<p>G12. Client Choice Regarding Service Provision. All clients receiving EBP services are offered choices; the EBP practitioners consider and abide by client preferences for treatment when offering and providing services.</p>	Client-centered services are absent (or all EBP decisions are made by staff)	Few sources agree that type and frequency of EBP services reflect client choice	Half sources agree that type and frequency of EBP services reflect client choice	Most sources agree that type and frequency of EBP services reflect client choice OR Agency fully embraces client choice with one exception	All sources agree that type and frequency of EBP services reflect client choice

**This document is part of an evidence-based practice implementation resource kit developed through a contract (no. 280-00-8049) from the Substance Abuse and Mental Health Services Administration's (SAMHSA) Center for Mental Health Services (CMHS) and a grant from The Robert Wood Johnson Foundation (RWJF). These materials are in draft form for use in a pilot study. No one may reproduce, reprint, or distribute this publication for a fee without specific authorization from SAMHSA.

APPENDIX X

Program _____ Respondent # _____ Role _____ Interviewer _____ Date _____.

CRITERION		RATINGS / ANCHORS				
		(1)	(2)	(3)	(4)	(5)

HUMAN RESOURCES: STRUCTURE & COMPOSITION

H1	SMALL CASELOAD: client/provider ratio of 10:1.		50 clients/clinician or more.	35 - 49	21 - 34	11 - 20	10 clients/clinician or fewer
H2	TEAM APPROACH: Provider group functions as team rather than as individual practitioners; clinicians know and work with all clients.		Fewer than 10% clients with multiple staff face-to-face contacts in reporting 2-week period.	10 - 36%.	37 - 63%.	64 - 89%.	90% or more clients have face-to-face contact with > 1 staff member in 2 weeks.
H3	PROGRAM MEETING: Program meets frequently to plan and review services for each client.		Program service-planning for each client usually occurs once/month or less frequently.	At least twice/month but less often than once/week.	At least once/week but less often than twice/week.	At least twice/week but less often than 4 times/week.	Program meets at least 4 days/week and reviews each client each time, even if only briefly.
H4	PRACTICING TEAM LEADER: Supervisor of front line clinicians provides direct services.		Supervisor provides no services.	Supervisor provides services on rare occasions as backup.	Supervisor provides services routinely as backup, OR Supervisor typically provides from 1 to 4.9 hours of direct service	Supervisor typically provides from 5 to 9.9 hours weekly.	Supervisor provides direct services at least 10 hours or more weekly
H5	CONTINUITY OF STAFFING: program maintains same staffing over time.		Greater than 80% turnover in 2 years.	60-80% turnover in 2 years.	40-59% turnover in 2 years.	20-39% turnover in 2 years.	Less than 20% turnover in 2 years.
H6	STAFF CAPACITY: Program operates at full staffing.		Program has operated at less than 50% of staffing in past 12 months.	50-64%	65-79%	80-94%	Program has operated at 95% or more of full staffing in past 12 months.
H7	PSYCHIATRIST ON STAFF: there is at least one full-time psychiatrist per 100 clients assigned to work with the program.		Program for 100 clients has less than .10 FTE regular psychiatrist.	.10-.39 FTE per 100 clients.	.40-.69 FTE per 100 clients.	.70-.99 FTE per 100 clients.	At least one full-time psychiatrist is assigned directly to a 100-client program.

Program _____ Respondent # _____ Role _____ Interviewer _____ Date _____.

CRITERION		RATINGS / ANCHORS				
		(1)	(2)	(3)	(4)	(5)
H8	NURSE ON STAFF: there are at least two full-time nurses assigned to work with a 100-client program.	Program for 100 clients has less than .20 FTE regular nurse.	.20-.79 FTE per 100 clients.	.80-1.39 FTE per 100 clients.	1.40-1.99 FTE per 100 clients.	Two full-time nurses or more are members of a 100-client program.
H9	SUBSTANCE ABUSE SPECIALIST ON STAFF: a 100-client program includes at least two staff members with 1 year of training or clinical experience in substance abuse treatment.	Program has less than .20 FTE S/A expertise per 100 clients.	.20-.79 FTE per 100 clients.	.80-1.39 FTE per 100 clients.	1.40-1.99 FTE per 100 clients.	Two FTEs or more with 1 year S/A training or supervised S/A experience.
H10	VOCATIONAL SPECIALIST ON STAFF: the program includes at least two staff members with 1 year training/experience in vocational rehabilitation and support.	Program has less than .20 FTE vocational expertise per 100 clients.	.20-.79 FTE per 100 clients.	.80-1.39 FTE per 100 clients.	1.40-1.99 FTE per 100 clients.	Two FTEs or more with 1 year voc. rehab. training or supervised VR experience.
H11	PROGRAM SIZE: program is of sufficient absolute size to provide consistently the necessary staffing diversity and coverage.	Program has fewer than 2.5 FTE staff.	2.5 - 4.9 FTE	5.0 - 7.4 FTE	7.5 - 9.9	Program has at least 10 FTE staff.

ORGANIZATIONAL BOUNDARIES

O1	EXPLICIT ADMISSION CRITERIA: Program has clearly identified mission to serve a particular population and has and uses measurable and operationally defined criteria to screen out inappropriate referrals.	Program has no set criteria and takes all types of cases as determined outside the program.	Program has a generally defined mission but the admission process is dominated by organizational convenience.	The program makes an effort to seek and select a defined set of clients but accepts most referrals.	Program typically actively seeks and screens referrals carefully but occasionally bows to organizational pressure.	The program actively recruits a defined population and all cases comply with explicit admission criteria.
O2	INTAKE RATE: Program takes clients in at a low rate to maintain a stable service environment.	Highest monthly intake rate in the last 6 months = greater than 15 clients/month.	13 -15	10 - 12	7 - 9	Highest monthly intake rate in the last 6 months no greater than 6 clients/month.

Program _____ Respondent # _____ Role _____ Interviewer _____ Date _____.

CRITERION		RATINGS / ANCHORS				
		(1)	(2)	(3)	(4)	(5)
O3	FULL RESPONSIBILITY FOR TREATMENT SERVICES: in addition to case management, program directly provides psychiatric services, counseling / psychotherapy, housing support, substance abuse treatment, employment/rehabilitative services.	Program provides no more than case management services.	Program provides one of five additional services and refers externally for others.	Program provides two of five additional services and refers externally for others.	Program provides three or four of five additional services and refers externally for others.	Program provides all five of these services to clients.
O4	RESPONSIBILITY FOR CRISIS SERVICES: program has 24-hour responsibility for covering psychiatric crises.	Program has no responsibility for handling crises after hours.	Emergency service has program-generated protocol for program clients.	Program is available by telephone, predominantly in consulting role.	Program provides emergency service backup; e.g., program is called, makes decision about need for direct program involvement.	Program provides 24-hour coverage.
O5	RESPONSIBILITY FOR HOSPITAL ADMISSIONS: program is involved in hospital admissions.	Program has involvement in fewer than 5% decisions to hospitalize.	ACT team is involved in 5% -34% of admissions.	ACT team is involved in 35% - 64% of admissions.	ACT team is involved in 65% - 94% of admissions.	ACT team is involved in 95% or more admissions.
O6	RESPONSIBILITY FOR HOSPITAL DISCHARGE PLANNING: program is involved in planning for hospital discharges.	Program has involvement in fewer than 5% of hospital discharges.	5% - 34% of program client discharges are planned jointly with the program.	35 - 64% of program client discharges are planned jointly with the program.	65 - 94% of program client discharges are planned jointly with the program.	95% or more discharges are planned jointly with the program.
O7	TIME-UNLIMITED SERVICES (GRADUATION RATE): Program rarely closes cases but remains the point of contact for all clients as needed.	More than 90% of clients are expected to be discharged within 1 year.	From 38-90% of clients are expected to be discharged within 1 year.	From 18-37% of clients are expected to be discharged within 1 year.	From 5-17% of clients are expected to be discharged within 1 year.	All clients are served on a time-unlimited basis, with fewer than 5% expected to graduate annually.

NATURE OF SERVICES

S1	COMMUNITY-BASED SERVICES: program works to monitor status, develop community living skills in the community rather than the office.	Less than 20% of face-to-face contacts in community.	20 - 39%.	40 - 59%.	60 - 79%.	80% of total face-to-face contacts in community
----	---	--	-----------	-----------	-----------	---

Program _____ Respondent # _____ Role _____ Interviewer _____ Date _____.

CRITERION		RATINGS / ANCHORS				
		(1)	(2)	(3)	(4)	(5)
S2	NO DROPOUT POLICY: program retains a high percentage of its clients	Less than 50% of the caseload is retained over a 12-month period.	50- 64%.	65 - 79%.	80 - 94%.	95% or more of caseload is retained over a 12-month period.
S3	ASSERTIVE ENGAGEMENT MECHANISMS: as part of assuring engagement, program uses street outreach, as well as legal mechanisms (e.g., probation/parole, OP commitment) as indicated and as available.	Program passive in recruitment and re-engagement; almost never uses street outreach legal mechanisms.	Program makes initial attempts to engage but generally focuses efforts on most motivated clients.	Program attempts outreach and uses legal mechanisms only as convenient.	Program usually has plan for engagement and uses most of the mechanisms that are available.	Program demonstrates consistently well-thought-out strategies and uses street outreach and legal mechanisms whenever appropriate.
S4	INTENSITY OF SERVICE: high total amount of service time as needed.	Average of less than 15 min/week or less of face-to-face contact per client.	15 - 49 minutes / week.	50 - 84 minutes / week.	85 - 119 minutes / week.	Average of 2 hours/week or more of face-to-face contact per client.
S5	FREQUENCY OF CONTACT: high number of service contacts as needed.	Average of less than 1 face-to-face contact / week or fewer per client.	1 - 2 / week.	2 - 3 / week.	3 - 4 / week.	Average of 4 or more face-to-face contacts / week per client.
S6	WORK WITH INFORMAL SUPPORT SYSTEM: with or without client present, program provides support and skills for client's support network: family, landlords, employers.	Less than .5 contact per month per client with support system.	.5-1 contact per month per client with support system in the community.	1-2 contact per month per client with support system in the community.	2-3 contacts per months per client with support system in the community.	Four or more contacts per month per client with support system in the community.
S7	INDIVIDUALIZED SUBSTANCE ABUSE TREATMENT: one or more members of the program provide direct treatment and substance abuse treatment for clients with substance use disorders.	No direct, individualized substance abuse treatment is provided by the team.	The team variably addresses SA concerns with clients; no formal, individualized SA treatment provided.	While the team integrates some substance abuse treatment into regular client contact, they provide no formal, individualized SA treatment.	Some formal individualized SA treatment is offered; clients with substance use disorders spend less than 24 minutes/week in such treatment.	Clients with substance use disorders spend, on average, 24 minutes / week or more in formal substance abuse treatment.

Program _____ Respondent # _____ Role _____ Interviewer _____ Date _____.

CRITERION		RATINGS / ANCHORS				
		(1)	(2)	(3)	(4)	(5)
S8	DUAL DISORDER TREATMENT GROUPS: program uses group modalities as a treatment strategy for people with substance use disorders.	Fewer than 5% of the clients with substance use disorders attend at least one substance abuse treatment group meeting during a month.	5 - 19%	20 - 34%	35 - 49%	50% or more of the clients with substance use disorders attend at least one substance abuse treatment group meeting during a month.
S9	DUAL DISORDERS (DD) MODEL: program uses a stage-wise treatment model that is non-confrontational, follows behavioral principles, considers interactions of mental illness and substance abuse, and has gradual expectations of abstinence.	Program fully based on traditional model: confrontation; mandated abstinence; higher power, etc.	Program uses primarily traditional model: e.g., refers to AA; uses inpatient detox & rehabilitation; recognizes need for persuasion of clients in denial or who don't fit AA.	Program uses mixed model: e.g., DD principles in treatment plans; refers clients to persuasion groups; uses hospitalization for rehab.; refers to AA, NA.	Program uses primarily DD model: e.g., DD principles in treatment plans; persuasion and active treatment groups; rarely hospitalizes for rehab. or detox except for medical necessity; refers out some s/a treatment.	Program fully based in DD treatment principles, with treatment provided by program staff.
S10	ROLE OF CONSUMERS ON TREATMENT TEAM: Consumers are involved as members of the team providing direct services.	Consumers have no involvement in service provision in relation to the program.	Consumer(s) fill consumer-specific service roles with respect to program (e.g., self-help).	Consumer(s) work part-time in case-management roles with reduced responsibilities.	Consumer(s) work full-time in case management roles with reduced responsibilities.	Consumer(s) are employed full-time as clinicians (e.g., case managers) with full professional status.

APPENDIX Y

ACT Chart Peer Review Tool

Reviewer:	Date of Review:			
Assigned Clinician/Degree:	Date of 1st Contact:		Date Appt Offered:	
Review Month:	Funding Sources: (Program Name)			
Service/Chart Number:	Select One			
Please answer all questions - an incomplete peer review is not useful.	Co-Occur- ring		MH	SA High Risk
ASSESSMENT	<u>score</u> 1=meets 0=does not meet	NA	ACT Specific	
Assessments are updated annually (outpatient only)			Annual updates must be in record along with original assessment	
Assessments are updated when significant changes occur in the consumer's presentation. (same as #6)			Assessment update must occur each time consumer presents with a significant change	
Consent for treatment includes the Consumer and/or Guardian signature, witness signature and is in a language understood by the Consumer. (MAD)			The treatment record should contain a completely filled out consent form for treatment signed by the consumer and/or guardian. Score "0" if any data is missing.	
Presenting problems, along with relevant psychological and social conditions affecting the Consumer's medical and psychiatric status are documented.			The assessment section of the clinical record includes the clinically significant psychosocial issues impacting the Consumer's presenting signs, symptoms, complaints and documented physical and mental illness	
Special status situations, such as imminent risk of harm (suicidal, homicidal or abuse), medically complex or elopement potential are prominently documented. (same as #8)			The medical record must indicate and assess the current level of risk. NA applies if no special risk issue is documented	
A psychiatric evaluation has been completed, signed & dated. (same as #8)			BiPolar seen within 14 days Y or N BiPolar labs in chart Y or N; Schiz seen within 14 days; Maj Dep seen within 30 days of diagnosis.	
A psycho-social assessment and history are documented including: psychiatric/treatment, medical, educational, legal, family, substance abuse, housing, and employment.			The treatment record must contain a psycho-social assessment signed by the clinician.	
The Mental Status Evaluation (MSE) documents affect, speech, mood, thought, content, judgment, insight, attention or concentration, memory and impulse control. (MAD)			The chart contains a completed MSE	
The Consumer's strengths are documented in the assessment. (DHI 24.6)			The chart contains an admission and psychiatric assessment that documents the Consumer's strengths (e.g. family support, social support and housing)	

The Consumer's religious, spiritual and cultural values are documented in the assessment. (MAD)				The treatment record must contain documentation of religious, spiritual and cultural values Consider single parenthood, dealing with a mental illness, lack of transportation/money/support system, etc.
Consumer's 12 and older, there is a screening for past and present use of cigarettes, alcohol, illicit, prescribed and OTC drugs. (MAD)				There is clear indication that drug use, nicotine, alcohol, etc. are documented or there is documentation that the Consumer does not use these substances. NA if consumer is under age 12.
Diagnostic Review includes an SDMI diagnosis and is updated annually.				
LIVING ARRANGEMENTS	<u>score</u>	NA		Comments
The Consumer's living situation is clearly described in the treatment record. (MAD)				Living situation is clearly documented in treatment record
DSM-IV DIAGNOSES (ALL FIVE (5) AXES)	<u>score</u>	NA		Comments
DSM-IV diagnoses (Axis I-IV) are documented initially and updated at least annually.				The treatment record must have all 5 axis completed every year.
The DSM-IV diagnoses are consistent w/the presenting problems, target symptoms, history, mental status evaluation, and/or other assessment data. (MAD)				There is documentation that the diagnoses match the presenting symptoms.
MEDICATION MANAGEMENT	<u>score</u>	NA	NA if psychotropic meds not prescribed	Comments
Psychiatric notes reflect target symptoms, rationale for medications, treatment recommendations and response to medications.				Abilify, Clozaril, Geodon, Haldol, Mellaril, Moban, Novane, Orap, Prolixin, Risperdal, Seroquel, Stelazine, Thorazine, Trilafon, Zydys, Zyprexa
Written informed consent for medication (in a language understood by the consumer and/or guardian) is documented.				AIMS required every 90 days Initial _____ Every 90 days _____ Discharge _____
There is evidence that the consumer and/or guardian received information about the illness or target symptoms for which the medication was prescribed.				Schizophrenia dx receives AIMS every 90 days _____
There is evidence of discussion regarding the need to take the medication as prescribed and not stop w/o discussing it w/the physician.				Based upon documentation, the reviewer can conclude the consumer was told how to take the medication and not to stop w/o doctor approval.
The record indicates what medications have been prescribed, the dosages of each and the dates of initial prescriptions or refills. (MAD)				Prescribed medications are documented. Dosages, routes and schedules for medications are documented.
Allergies, or lack of known allergies and adverse reactions and sensitivities to pharmaceuticals and other substances are prominently noted. (MAD)				There is documentation that the Consumer was asked about allergic reactions to medications and other substances.
When medications are prescribed, there is evidence of an evaluation of the Consumer's response to the medication and adjustments are made as needed.				There is documentation in the prescriber's notes of the consumer's response to the medication prescribed.

When medications are prescribed that require serum level monitoring and/or other laboratory tests, those tests are done and the results are documented.				<i>There is documentation that appropriate labs were ordered and the results are in the treatment records. NA if the consumer is not on meds requiring monitoring and/or lab testing.</i>
RESPONSE TO TREATMENT/PROGRESS NOTES	score	NA		Comments
Progress notes reflect the response to treatment and the progress toward goals.				<i>There are progress notes reflecting consumer's response to treatment.</i>
Progress notes reflect documentation regarding the Consumer's status in treatment (missed and/or kept appointments).				<i>There is documentation in progress notes of missed and/or kept appointments.</i>
The record reflects continuity and coordination of care (i.e. consents for contact) w/health care institutions, consultants, ancillary and other non-behavioral health providers.				<i>There is documentation of signed releases when indicated. NA applies if consumer is not involved w/other services.</i>
The record reflects the active involvement of the family/primary caregivers in the assessment and treatment of the consumer, unless contraindicated.				<i>There is documentation of involvement of family or caregivers in the treatment process. NA if consumer is an adult w/o caretaker or the evaluation determined the involvement of family would be detrimental to recovery.</i>
The record documents preventive/recovery services as appropriate (e.g. relapse prevention, stress management, peer directed programs, wellness programs, lifestyle changes and referrals to community resources).				<i>There is documentation of recovery/prevention services as needed.</i>
The record reflects continuity and coordination of care w/ PCP.				<i>There is documentation of communication w/the PCP unless the consumer does have a PCP. NA applies if documentation states the consumer does not have a PCP.</i>
Progress note content supports the objective(s) identified from the tx plan that are addressed during that appointment.				
Program Director countersigns all Crisis related notes.				
Progress note identifies place of service				
Progress note justifies a billable service.				
ACCESS TO CARE	score	NA		Comments
For Inpatient: Follow-up appointments are offered within 7 or 30 days of discharge. (MAD)				<i>Pt readmitted to IP within 30 days Y or N . NA applies if treatment record does not indicate consumer was an inpatient.</i>
Outpatient: Appointments are offered within 14 business days of initial contact for Medicaid funding and 10 business days for DOH funding.				Routine=14 or 10 days Urgent=24 HRS Emergent = 30min/phone 8hr/Face
The record reflects provider follow-up activities related to consumers who miss or reschedule appointments. (MAD)				<i>There is documentation that appointments were missed and that follow-up was done as a result.</i>
DISCHARGE	score	NA		Comments
The intake assessment and/or initial treatment plan indicate discharge planning was initiated upon admission.				<i>Preliminary discharge plans should be noted in the initial intake assessment.</i>

The discharge summary describes the presenting problem, course of treatment, treatment gains made, and specific (who, what and where) aftercare plans. (Same as #41)				The record has a comprehensive discharge summary. NA applies if consumer is still in care.
SUBSTANCE ABUSE	score	NA		Comments
The treatment record documents an Addiction Severity Index (ASI).				SA DX, ASI required: Admission _____, 90 day F/U _____, every 120 days _____, Discharge _____
The treatment record documents a substance abuse assessment/screen (e.g. SASSI, MAST, MIDAS) (MAD)				The record has a substance abuse assessment /screen
The record documents a substance abuse DSM IV diagnosis. (MAD)				Substance abuse diagnosis is documented. NA applies if there is no substance diagnosis.
The treatment record documents provision of SA tx by ACT or coordination of care including external referral to a substance abuse provider. (MAD)				There is documentation of coordination of care. NA applies if no coordination of care is needed.
Treatment strategies include group modalities.				
TREATMENT PLAN & RECOMMENDATIONS	score	NA		Comments
A treatment plan is present in the clinical record.				There is documentation that the treatment plan is relevant to primary diagnosis and Consumer agreed with goals.
A master/comprehensive treatment plan was completed within 30 days or the third session of outpatient services.				There is documentation of a completed master treatment plan signed and dated, within 30 days or the third session from the initial intake date.
A treatment plan review was completed at least every 90 days for Outpatient Services				Documentation of a completed treatment plan review at least every 90 days for adults & 30 days for children, signed and dated.
Treatment plans are consistent with diagnoses and Consumer's agreed upon goals. (MAD)				There is documentation that the treatment plan relevant to primary diagnosis and Consumer agreed with goals.
Goals/Objectives are measurable				There is documentation of measurable goals and objectives.
Goals/Objectives are individualized. (MAD)				There is documentation the goals and objectives are based on the individual's assessment/needs.
There is a time frame for goal attainment/problem resolution. (Same as #54)				There is documentation of time frames.
Treatment interventions are consistent w/the treatment plan.				There is documentation of treatment modalities and interventions related to the goals of treatment.
The treatment plan is written in a language the consumer can understand. (MAD)				There is documentation that the consumer participated in the treatment plan development and has understanding of the plan, with a consumer signature.
Documentation includes the signature of appropriate parties.				The treatment plan is signed by th treatment team.

Treatment plan reflects utilization of Consumer's strengths. (MAD)					Consumer strengths are incorporated in treatment plan.

APPENDIX Z

ACT SERVICE AUDIT TOOL
AUDIT PERIOD: _____

HSD REVIEWER: _____ **REVIEW DATE:** _____

CLIENT NAME: _____ **MEDICAID NUMBER:** _____

DOB: _____ **AGE:** _____

Check the appropriate box and note comments in spaces provided.

	Yes	No
1. Does the client meet the eligibility requirements for participation in the ACT program?		
-Client is 18 years or older		
-A severe mental illness has been diagnosed (Schizophrenia, Schizoaffective Disorder, Bipolar Disorder, or Psychotic Depression) by a licensed professional		
-Client has severe problems completing ADLs		
-Significant history of involvement in behavioral health services		
-Repeated hospitalizations and/or incarcerations		
-Frequent use of emergency services		
2. A comprehensive assessment, establishing medical necessity was completed within 40 days of client admission to ACT Program		
3. The file contains a culturally relevant service plan that is responsive to the individual's choices		
4. The individual's service plan was signed by a psychiatrist, ACT team leader and the client prior to the initiation of services		
5. Does the individual service plan contain the following elements:		
-A diagnosis of severe disabling mental illness (Schizophrenia, Schizoaffective Disorder, Bipolar Disorder, or Psychotic Depression) by a licensed professional		
-Plans to address psychiatric conditions		
-Treatment goals & objectives (including target dates)		
-Preferred treatment approaches and related services		
-Educational, vocational, social, wellness management, residential or recreational goals, and concrete and measurable objectives		
-Psychopharmacological treatment plan		
-Crisis/relapse prevention plan including advance directive		
-An integrated substance abuse and mental health service plan for individuals with co-		

occurring disorders		
6. The individual service plan is reviewed and updated every six months	Yes	No
7. Do the progress notes reflect service interventions identified in the individual service plan as related to the following act services:		
Psychiatric Services		
Medication Management		
Counseling Services		
Psychotherapy		
Substance Abuse Treatment		
Housing Support		
Employment/Vocational Services		
Rehabilitation Services		
Case Management Services		
8. Do the progress notes and/or other relevant documentation reflect the billed modifier, level of interaction with the client and the service provider? Modifier activities must be indicated in the service plan. (*See below for modifiers)		
9. Do the progress notes and/or other relevant documentation reflect the number of units billed to Medicaid?		

***Modifier Activities:**

U1 = Face-to-face encounter with a client; encounters can occur outside the office (cell phone contacts and family or collateral contact cannot be billed as face-to-face encounters).

U2 = Collateral encounter occurred with members of the client's family or household, or with other contacts who interact with the client regularly and who are identified in the service plan as having a role in the client's treatment.

U3 = Assertive outreach involving the ACT Team member monitoring the client's relationships within the community and early intervention if difficulty arises. The team must closely monitor relationships that the client has within the community.

Introduction Interview Questions:**DATA SOURCES****Team Leader**

Before we begin, let's make sure we have a copy of the forms we requested for this fidelity review, as we may be referring to them during our visit.

[Introductory Statement] **We also want to make sure the purpose of this fidelity evaluation is clear to you:** [insert purpose here.] **The specific information you provide to us will not be shared in a way that's tied back to you. An exception is us sharing feedback that is particularly positive. Also, our goal is to give you the most accurate feedback to help your team. The more factual the information we receive, the better we are at making targeted recommendations. Do you have any questions?**

[If this is a new team or team leader:]

We'd like to start by asking what do you think the purpose and philosophy behind Assertive Community Treatment (or ACT) is or should be?

[If this is a follow-up fidelity review with this team:] **Tell us about some of the changes your team has made since the last review.**

admission criteria and screening tools; assessments;
 treatment plans; crisis plans; transition readiness (i.e., graduation) assessment or a list of transition readiness criteria;
 a recently completed daily team schedule; an example of a team member individual schedule; a de-identified (i.e., cross-out name[s]) copy of a client log page; a de-identified copy of a weekly/monthly client schedule; any health communication forms used to correspond with non-ACT providers; and any relevant agency or program policy guiding your work.

A copy of a Client ID key with client names listed to reference during interviews.

Clinicians

[If helpful, provide the same introductory statements about confidentiality as noted above.]

We'd like to start by asking what do you think the purpose and philosophy behind Assertive Community Treatment (or ACT) is or should be?

[If this is a follow-up fidelity review with this team:] **Tell us about some of the changes your team has made since the last review.**

Psychiatric Care Provider

[If helpful, provide the same introductory statement about confidentiality as noted above.]

[If this is a new team or psychiatric care provider:] ***We'd like to start by asking what do you think the purpose and philosophy behind Assertive Community Treatment (or ACT) is or should be?***

[If this is a follow-up fidelity review with this team:] ***Tell us about some of the changes your team has made since the last review.***

Clients

Thank you for meeting with us today. We're visiting this ACT team to better understand what they're doing well and what they could be doing better. We're interested in your experience with this ACT team. Your individual responses will be kept confidential. Do you have any questions? [If the agency or situation requires it, review the agency's provided confidentiality/consent form and ask them to sign. The strong preference is for this interview to be completed without ACT team members present.]

Generally, what do you think about the ACT team?

How have they helped you?

Can you share any concerns you have about the ACT team?

What would you like them to do differently, if anything at all?

OS1. Low Ratio of Clients to Staff

Definition: The team maintains a low client-to-staff ratio, not to exceed 10:1, which includes all direct service staff except for the psychiatric care provider. The staff count does NOT include other administrative staff such as the program assistant or other managers assigned to provide administrative oversight to the team.

Rationale: ACT teams are intended to serve a high service-need clinical population and to be the primary service provider across a range of service domains. Therefore, ACT teams should maintain a low client-to-staff ratio to ensure adequate intensity and individualization of services.

DATA SOURCES (* denotes primary data source)

Team Survey*

See item #1 regarding staff FTE and item #7a regarding number of clients currently enrolled .

Team Leader Interview*

Briefly review and confirm whether each staff/team member meets inclusion criteria below, and identify which staff were employed with the team in past three months, but are no longer (this information will be helpful when conducting the chart review). Ensure that all current staff are clearly listed in the Team Survey.

ITEM RESPONSE CODING**Inclusion Criteria****ACT Staff:**

- Count all part- and full-time staff that provide direct services (e.g., COD specialist, employment specialist, team leader) who work exclusively with the ACT team at least 16 hours a week ($16/40 = 0.40$ FTE) and attend the daily team meeting at least twice a week.
- Count only staff who have started work with the team at the time of the on-site review (i.e., do not count staff who have merely received, or accepted, a job offer).
- Count interns if they meet above criteria and will work with the team for at least six months.
- In the event a team member is on extended leave and the team has filled this position with interim staff, only count the permanent staff person on extended leave (i.e., do not credit both the permanent and temporary staff member for this one position).

Clients:

- Include all clients enrolled on the team, even very recent admissions. Do not exclude clients currently enrolled on the team who are difficult to engage and have not had recent contact with the team.

Exclusion Criteria**Do not count the following staff in this rating:**

- Psychiatric care provider (i.e., psychiatrist, nurse practitioner, or physician assistant serving in the role of the psychiatric care provider}.
- Administrative support staff, such as the program assistant, or other managers assigned to provide administrative and/or clinical oversight to the team.
- Staff who are employed by the team, but who have been on extended leave for three months or more.

Note: Evaluate whether staff FTE reflects actual hours worked vs. time available to the team (i.e., count hours worked, not mere availability}

Formula: <u># of clients currently enrolled</u> # FTE staff	<u>Note:</u> 1.0 FTE equals the hours worked by one team member on a full-time (i.e., 40 hours a week} basis. To calculate the FTEs across all team members, you may need to first convert number of hours worked to FTEs (e.g., 32 hours a week is 0.8 FTE. Formula: $32/40 = 0.8$ }, then add all team member FTEs together.
--	--

OS1 Low Ratio of Clients to Staff	1	2	3	4	5
	26 clients per team member or more.	19 - 25	14 - 18	11 - 13	10 clients per team member or fewer.

OS2. Team Approach

Definition: ACT staff work as a transdisciplinary team rather than as independent team members; ACT staff know and work with all clients rather than carry individual caseloads. Although the entire team shares responsibility for each client, each team member contributes expertise as determined by client goals and needs identified in the person-centered plan, and carried out by each individual treatment team (ITT).

Rationale: The team approach ensures continuity of care for clients, and creates a supportive organizational environment for team members. Furthermore, given that each client has personal goals and a broad range of service needs, deliberate scheduling of service interventions delivered by those team members with the most expertise and skill in those areas suggests the need for such a team approach to service delivery.

DATA SOURCES (* denotes primary data source)

Chart Review* - Chart Review Log Part I (p. 195-196) and Chart Review Tally Sheet Part I (p.197-198)

Review randomly selected charts (at least 20% sample or a minimum of 10 charts in smaller teams). Use the most recent and complete 4-week period from the chart (within 3 months of the site visit dates), and attempt to avoid time frames that do not represent typical team service provision (e.g., during a recent holiday or multiple staff training days).

Count the number of direct service ACT team members, including the psychiatric care provider, who have had a face-to-face contact with the client during this time; exclude any staff predetermined to not meet inclusion criteria specified in item OS1 and OS5. Include team members who are no longer employed by the team at the time of the on-site visit, but were employed during the chart period.

Note: If the team can provide reliable and valid data from their electronic medical record for all individuals served by the team, these data can be used to rate this item, using the same four-week calendar period. Refer to TMACT Part I for further instructions.

Daily Team Meeting - Observation Form (p. 189-192)

Observe how staff members are scheduled to provide services to clients. Ideally, staff assignments will vary naturally based on each client's treatment plan and careful matching of individual client needs with staff expertise and established rapport; however, the team should also try to diversify staff scheduling to foster ongoing relationships between each client and several team members. Note how the use of geographical location break-outs or grids inform staff scheduling patterns.

ITEM RESPONSE CODING

Rating Guidelines

Use the chart review as the primary data source, unless the team can provide full caseload data that has been judged to be reliable and valid. The evaluator may judge whether select contacts should be included given the quality of contacts (e.g., a team leader documents a contact that appears to be an unplanned run-in at the agency, with no apparent purpose). If the information from various sources is inconsistent (e.g., daily team meetings seem to point to a higher rate of shared caseloads than do the records), ask the team leader to help you understand the discrepancy.

Refer to observations within the daily team meeting regarding the quality of a team approach (e.g., thoughtful assignment of staff according to treatment plans and individual treatment teams (ITTs), which is recommended, or random assignment of staff, which is not recommended). Overall low frequency of contacts could decrease the opportunity for a true team approach, as well. Such information can guide quality improvement feedback.

For the final tally, calculate the percent of client charts where at least 3 team members met with the client in the 4-week period, but exclude charts with no documented face-to-face contacts in that period. As an example, 15 charts are reviewed, with 2 charts having no face-to-face contacts. Ten (10) charts were observed to have face-to-face contacts with at least 3 team members. The final rating is then $10/13 = 77\%$.

Formula:

$$\frac{\text{\# of clients with face-to-face contacts with at least 3 team members in a 4-week period}}{\text{Total \# of charts reviewed (include only those with at least 1 face-to-face contact)}} \quad (\mathbf{X 100})$$

Refer to the TMACT Calculation Workbook or to the Chart Review Tally Sheet to enter and compute these data.

	1	2	3	4	5
OS2 Team Approach	Fewer than 25% of clients have face-to-face contacts with at least 3 team members in 4 weeks.	25 - 52%	53 - 74%	75 - 89%	90% or more clients have face-to-face contact with at least 3 team members in 4 weeks.

OS3. Daily Team Meeting (Frequency & Attendance)

Definition: The team meets daily to review and plan services. To this end, most team members should be present to effectively carry out such a review. To constitute a daily team meeting, it must meet the following criteria: there is a review of each client's status; there is planning for future services; most team members are present.

Rationale: Daily team meetings allow ACT staff to briefly discuss clients' status over the past 24 hours (or weekend), problem-solve approaches to address current or prevent future crises, and discuss planned treatment and rehabilitation contacts, ensuring that all clients receive the best possible services. Regular, consistent, in-person attendance by all staff ensures optimal information-sharing and continuity, and promotes team cohesion.

DATA SOURCES (* denotes primary data source)**Team Survey**

Refer to Table 1 (Item #1) where the number of daily team meetings attended by staff per week should be listed.

Daily Team Meeting - Observation Form (p. 189-192)

Note who attends the meeting, for how long, and whether conversations indicate that the team has met in previous days to share their assessment and service delivery information. Inquire during staff interviews of possible discrepancies between what was reported in the Team Survey and what was observed (e.g., a major life event for a client was commented on, and a team member reacts as if hearing this for the first time even though this life event occurred two weeks ago). Follow-up inquiry would explore reasons for this discrepancy, such as the team member may just be returning from vacation, this team member's typical attendance may be lower than reported, the team is not meeting daily as reported, and/or the quality of information shared during a typical meeting may be inadequate.

Team Leader Interview

How often does the ACT team meet as a full group to review and plan daily services?

Do scheduled daily team meeting times vary throughout the week? [If yes, inquire reasons for variation and how meetings may change in focus and attendance across the week.]

What are the expectations for staff attendance? How do you maximize staff attendance? [Prompt for team's use of multiple service shifts and/or staggered staffing across the week (e.g., using 4x10-hour shifts) and how that may affect attendance in the daily meeting.]

How is information shared or passed on to staff members who are not in attendance? In what way is telecommunication used? [Refer to the Team Survey and inquire about days that appear to have fewer team members present.]

How does the attendance we observed at the daily team meeting compare with typical attendance?

ITEM RESPONSE CODING

Inclusion Criteria

Frequency credit considerations:

To count as a daily team meeting, most team members need to be present and scheduled meeting times facilitate meaningful review of client status over the past 24 hours (e.g., the meeting is consistently scheduled at approximately the same time each day). If a team meets in the morning on Monday and Tuesday, the afternoon on Wednesday, and then meets again in the morning on Thursday and Friday, do not count the Thursday meeting as one of the daily team meetings.

Full attendance credit considerations:

- **Attendance:** Attendance in person is expected. Team members calling or video-conferencing into the meeting should be the exception, not the norm. In-person attendance offers better opportunities for meaningful exchanges, reduces multi-tasking that detract from attending to the meeting content, and provides the opportunity for the team to work together and enhance team operations.
- **Psychiatric Care Provider:** A psychiatric care provider should be present to participate in the daily team meeting at least twice a week. The expectation is full attendance rather than only attending a portion of the meeting.
- **Sufficient Communication:** There should be adequate processes in place to ensure communication of relevant information for those not in attendance. If there are routine absences due to two separate shifts or staff with 4x10-hour shift coverage, the team should ensure that most team members are in attendance. This may require changing the time of the daily team meeting or changing staff scheduling patterns to ensure more team member attendance. As described in OS1, if a person does not attend a daily team meeting at least twice a week, they are not to be considered as part of the team.

Exclusion Criteria

Do not include administrative or treatment planning meetings for this item. If a team reports holding daily team meetings five days a week, but it is later revealed that one such meeting is an administrative meeting and there is no basic review and planning of service contacts, rate based on four daily team meetings per week.

Rating Guidelines

The team leader interview is the primary data source. Corroborate with observation of the daily team meeting.

	1	2	3	4	5
OS3 Daily Team Meeting (Frequency & Attendance)	Team meets fewer than 2 days a week.	Team meets 2 days a week.	Team meets 3 days a week with or without full attendance OR team meets 4 days a week, but without full attendance.	Team meets 4 days a week with full attendance OR team meets 5 days a week, but without full attendance.	Team meets 5 days a week with full attendance.

OS4. Daily Team Meeting (Quality)

Definition: The team uses its daily team meeting to:

- (1} Conduct a brief, but clinically-relevant review of all clients & contacts in the past 24 hours AND
- (2} Record the status of all clients.

The team develops a daily staff schedule for the day's contacts based on:

- (3} Weekly/monthly client schedules,
- (4} Emerging needs,
- (5} Need for proactive contacts to prevent future crises;
- (6} Staff are held accountable for follow-through.

Rationale: Daily team meetings allow ACT staff to systematically update information, briefly discuss clients' status over the past 24 hours, problem-solve approaches to address current or prevent future crises, and discuss planned treatment and rehabilitation contacts, ensuring that all clients receive the best possible services.

DATA SOURCES (* denotes primary data source)

Daily Team Meeting* - Observation Form (p. 189-192}

Refer to Table 2 below for guidance on what to attend to during the daily team meeting.

Team Leader Interview*

(**Note:** Ask daily team meeting questions after observing a daily team meeting. With each question, reference specific observations on how the meeting was conducted.)

Was the daily team meeting we observed today typical of your daily team meetings, and if not how was it different?

How long is a typical daily team meeting?
[Ask follow-up questions if there is a discrepancy between what was observed and what is typical]

Can you summarize for us the roles of various team members in facilitating the daily team meeting? Who was writing/entering information into the daily client log? Who was leading the roll call of clients? Who, if anyone, was managing today's schedule? Did anyone have out yesterday's schedule for review?

What directions do team members receive on what to share during the roll call?
[Further inquire about how lengthier conversations may be managed, the level of information-sharing that is expected, and whether team members are doing their own documentation into the log prior to the daily team meeting and how that may impact the report out during the meeting.]

How do you determine what needs to happen with each client each day?

Do you use Individual Treatment Teams (ITTs), and how do you create ITTs?

Is a staff schedule created daily? [If yes:]
Using what information?

[Prompt for the extent to which they use the weekly/monthly client schedules to develop their daily staff schedule and how the client schedule itself is created and updated. Pay attention to the extent to which geographic location grids are used to schedule contacts for the day, and whether additional practice standards (e.g., productivity) drive scheduling. Also listen for efforts to schedule out more specific interventions.]

What is your approach to addressing clients' emerging needs identified during the daily team meeting (e.g., crisis contacts or unplanned contacts based on new information shared during the daily team meeting)? [Refer to specific examples observed during the daily team meeting.]

When you have a client who isn't currently in crisis, but you see signs or have concerns that they may go into crisis soon, how is that handled during the daily team meeting? *Can you give me an example?* [Refer to specific examples observed during the daily team meeting.]

Do you have any way of monitoring to ensure staff follow-up on scheduled contacts and interventions? [If yes:] *Can you describe to me what that is? How do you identify and address a client with a sequence of missed contacts or attempts?* [Reference specific observations from team meeting, if relevant; determine whether staff are accountable for contacts only, or delivery of assigned interventions.]

Weekly/Monthly Client Schedules* and Chart Review (Treatment Plans)* - Chart Review Log Part II (p. 197-198)

Weekly/Monthly Client Schedules are created for each client, derived from the treatment plan, and regularly updated. These schedules display planned services (i.e., regular contacts and scheduled appointments) either weekly or monthly to meet objectives and goals listed in clients' treatment plans (See example in Table 1).

- Cross-reference client schedules with the treatment plans and services documented in the progress notes for the same clients whose charts are reviewed. Is there an appreciable tie between plans, schedules, and services to suggest that client schedules are optimally used to bridge plans and daily scheduling?
- Examine the level of detail regarding services specified in the client schedule.

Daily Staff Schedule*

Typical daily staff schedules (or "daily team schedule") include all the pre-planned staff contacts with each client for that day (as driven by each weekly/monthly client schedule), as well as newly scheduled contacts based on clients' emerging needs or the need to proactively engage clients to prevent future crises. Daily staff or team schedules may also include planned indirect time, such as clinical supervision and documentation.

If the team leader confirms that the team uses client schedules to develop daily staff (team) schedules, examine the following:

- Level of detail regarding services scheduled to be delivered that day and approximate time of delivery
- Scope of services provided (e.g., is a single client receiving a range of services?)
- Number of clients scheduled out to be seen by individual team members (e.g., if a single team member is scheduled to see eight people in one day, this suggests more limited contacts and less robust treatment interventions)
- The extent to which the schedule appears to follow from a treatment plan (ideally, via client schedules) and demonstrates responsiveness to emerging issues.

Ensuring Staff Accountability*

The intent of this function is not to micromanage staff activities, but to assure that clients are receiving the level and type of services that they need. **If the team leader confirms that they have a mechanism to ensure staff accountability, ask to see it.**

ITEM RESPONSE CODING**Rating Guidelines**

Use Table 2 Guidelines to evaluate the extent to which the daily team meeting fully serves all six functions.

Table 1. Sample Weekly Client Schedule

Name: Joe Smith		ITT: Jeff, Employment Specialist; Jan, Peer Specialist; Sandra, Care Coordinator				
	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday/Sunday
AM	9:30-11 Med management/education; Career Profile-Jeff, Emp Specialist		10:30 - 11:00 Psych and med evaluation-Dr. Klein (3 rd week of every month only) 11:00 - 12pm WMR Group— Jan, Peer Specialist		9:30-10:30 Med management; activities of daily livings (ADL) assistance and skills training (house cleaning) - Sandra, care coordinator	
PM						2-4 Social skills training in community— Weekend Staff on Rotation (2 nd and 4 th Saturday)

Consumer Log: Joe Smith

Table 2. Daily Team Meeting (Quality)

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #1: Conduct a brief, but clinically-relevant review of all clients and contacts in the past 24 hours.	<ul style="list-style-type: none"> Team does not review all clients (this includes when the report is organized by each staff member taking turns reporting out on who they saw, skipping over those not seen, whether scheduled to be seen or not); or Only one or two team members simply read through the previous day's recorded contacts for all clients (rather than each team member reporting on their own contacts to the team, which is then recorded). 	<p>The team reviews all clients, but the content of the report is either:</p> <ul style="list-style-type: none"> Too brief to give enough information to the team about status and possible next steps; or Too lengthy to provide enough time to review all clients in an efficient manner (i.e., excessive time is spent on several clients, which results in rushed reports on other clients); or Too extensive in that they repeatedly review clients who were seen more than 24 hours prior to the meeting. <p>Partial credit may be warranted if the meeting was unfocused and/or generally poorly attended to by staff (e.g., many side conversations ensued).</p>	<p>If the client was scheduled and seen the previous day/weekend, team member describes mental status, relevant behaviors, & staff interaction with client. If client was scheduled and not seen, team may note barriers to contact (e.g., timing of day) or concerns about missed appointment. If the client was not scheduled, no report is typically given.</p> <p>Ideally, this meeting is focused, but also incorporates some dynamic staff interaction that facilitates ongoing clinical assessment and planning. A small team serving 50 should be able to complete their daily meeting within 45 minutes to an hour; a larger team serving 100 should be able to complete it within an hour to 75 minutes. Significant departures from these timeframes may be due to this function not being fully carried out.</p>
Function #2: Record status of all clients.	<ul style="list-style-type: none"> No such recording occurs; or Information is inconsistently recorded across time 	<p>Client status is regularly recorded, but information logged varies in detail, undercutting its utility as an assessment snapshot (e.g., stability, availability, response to service); or</p>	<p>Client status (mental status/relevant behaviors & staff interaction with client) is recorded daily in some form of a log. The log should serve as a useful clinical snapshot of each individual in a given month. Ideally, the log is predated by</p>

Table 2. Daily Team Meeting (Quality)

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
	and/or does not facilitate quick, clinically useful assessment of client's status (stability, availability, response to service}.	team members independently enter their own updates into the log after services have been rendered, but before the daily team meeting, making this process inefficient and likely missing the aim of providing a succinct snapshot that allows one to quickly check status across time/staff, etc.	month for each person, showing services provided, services not provided, and missed contacts. The log is available to team members so that staff can go back and review each client's brief status report if necessary.
Function #3: Daily staff schedule is based on person-centered plan-informed <u>client schedules</u> . ¹	<p>☒ There are no client weekly/monthly client schedules; or</p> <p>☒ There is no evident relationship between client schedules with either daily staff schedules OR with person-centered plans; or</p> <p>☒ There is not enough detail in the client schedule regarding at least <u>two</u> of the following:</p> <ul style="list-style-type: none"> • the specific intervention, • who is delivering it, and/or • when it is delivered. 	<p>Client weekly/monthly schedules exist, however:</p> <ul style="list-style-type: none"> • Daily staff (team) schedules and client schedules are misaligned, and/or are narrow in their focus on (e.g., medications and group attendance); or • Client schedules are weakly informed by person-centered plans; or • The team excessively uses location or geographic grids to determine who delivers services vs. who is the best fit for delivering that service; or • There is not enough detail in client schedule regarding <u>one</u> of the following: <ul style="list-style-type: none"> • the specific intervention, • who is delivering it, and/or • when it is delivered. 	<p>Client weekly/monthly schedules exist and these schedules serve as a bridge between the interventions listed in the person-centered plan and what is created for the daily staff (team) schedule. Client schedules are formatted and updated in a manner to capture planned interventions, who is to deliver these interventions, and when the interventions are delivered. The format is also conducive to sharing with clients so they may have a copy of their own schedule. <u>Example:</u> If the person-centered plan indicates attending Illness Management and Recovery (IMR) group as an intervention, that in turn is more specifically scheduled in the client schedule (e.g., listed as an activity for Wednesday from 10 – 11 with Beth, the peer specialist}, and then in turn shows up as an activity for Beth to complete on the Wednesday daily staff (team) schedule. <u>For full credit, client schedules exist and:</u></p> <ul style="list-style-type: none"> • are formatted to be shared with clients; • have sufficient detail capturing the nature of the intervention, who is delivering it, and when it is delivered; • appear to drive the daily staff (team) Schedule content and appear to approximate interventions in the person-centered plan.
Function #4: Daily staff schedule is based on clients' <u>emerging needs</u> .	Team members talk about clients' emerging needs, but do not specify a plan for contacts to address those needs.	The team talks about clients' emerging needs in the daily team meeting, but is inconsistent about the extent to which they specify a plan for contacts to address those needs.	The daily staff schedule is also based on clients' <u>emerging needs</u> identified during staff report during the daily team meeting. Emerging needs are defined as any client needs identified during the daily team meeting that were not already scheduled to be addressed for that day based on that client's weekly /monthly schedule. Examples include: medical, dental, or other appointments not regularly scheduled based on the clients' treatment plan; and crisis response contacts and hospitalization.

¹ Use Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate the percentage of weekly client schedules that match up with each client's treatment plan.

Table 2. Daily Team Meeting (Quality)

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #5: Daily staff schedule is based on the need for <u>proactive contacts</u> to prevent future crises.	The team discusses concerns in the daily team meeting without developing a plan to either address the concern in a currently scheduled contact or plan to add a contact with the client in the daily staff schedule. Teams who are not meeting consistently inherently create a communication gap resulting in poorer coordination around proactive contacts.	<p>There is evidence that the team follows up on making proactive contacts with clients, but they are inconsistent in doing so (e.g., both types of examples were observed in the meeting).</p> <p>Teams that operate like individual case management teams (minimal team approach) may communicate less with each other to coordinate services overall. In such cases, it will be important to understand how well each team member is being responsive to proactive contacts on their own.</p>	<p>Team members consistently plan to see clients who need proactive contacts. "Proactive contacts" are preventive contacts aimed at heading off future crises. Example proactive contacts include the following:</p> <ul style="list-style-type: none"> • Contact with a client before or during the anniversary of a significant event (e.g., a death of a significant other); or • Recognizing early warning signs and promptly scheduling a contact with them. <p><u>Note:</u> Since proactive contacts may be low frequency events, an example may not be observed in the daily team meeting during the fidelity evaluation. Thus, automatically give credit to teams for proactive contacts unless there is evidence that it is not happening (e.g., team discusses concerns without developing a plan to be proactive).</p>
Function #6: Staff are held accountable for follow-up	There is no formal or informal mechanism for ensuring staff accountability in place.	There is a mechanism in place, but there is evidence that it is not typically followed or is not enforced when team members do not follow-up with planned contacts. Accountability may be more focused on contacts alone, not whether planned interventions were carried out.	<p>A mechanism is in place to ensure that staff successfully complete or attempt to complete their assigned contacts each day, which ultimately holds the entire team accountable to follow-up on interventions delineated in the weekly/monthly client schedules, and those recently assigned to address emerging needs. Example mechanisms include the following:</p> <ul style="list-style-type: none"> • Team leader compares the previous day's staff schedule to staff reports of previous day's contacts during daily team meeting; • Staff checks off or initials daily log or daily staff schedule after they have completed the day's assigned contacts; and • Staff communicates (e.g., email, phone) with team leader and/or team to let them know the outcome of their planned contacts that day.

OS4 Daily Team Meeting (Quality)	1	2	3	4	5
		The daily team meeting serves no more than 3 functions.	4 functions are performed at least PARTIALLY (2 are absent).	5 functions are performed at least PARTIALLY (1 is absent) OR ALL 6 functions are performed with 4 or more PARTIALLY performed.	ALL 6 functions are performed, with up to 3 PARTIALLY performed.

OS5. Program Size

Definition: The team is of a sufficient size to consistently provide for necessary staffing diversity and coverage.

NOTE: This item includes separate parameters for minimal coverage for smaller teams to allow for enough staff to be available 24 hours a day, seven days a week.

Rationale: The ACT team provides an integrated approach to mental health services, through which the range of treatment issues are addressed from a variety of perspectives; it is critical to maintain adequate staff size and disciplinary background to provide comprehensive, individualized service to each client.

DATA SOURCES (* denotes primary data source}**Team Survey**

See team responses to item #1 regarding the number of ACT staff and item #7b regarding the number of clients the team is equipped to serve at capacity .

Team Leader Interview*

Briefly review and confirm data regarding staffing as reported in item #1 on the Team Survey. Also clarify current capacity, which may be intentionally staggered given team development plans.

ITEM RESPONSE CODING**Inclusion Criteria**

- Count all direct service staff who meet the criteria to be included in the count for OS1² and psychiatric care provider staff following inclusion criteria listed below.
- For teams with more than one psychiatric care provider, each provider must be assigned to work with the team at least 0.20 FTE (i.e., 8 hours/week).
- Psychiatric Residents may also count toward the team staffing if they are assigned to the team at least 0.20 FTE (i.e., 8 hours/week) and are assigned to the team for one year.

Exclusion Criteria

- Do not count the program assistant or any other administrative staff/managers who oversee team.

Rating Guidelines and Formula

Teams that have a caseload size cap at or slightly above or below a 100-client team or 50-client team should simply use the FTE staffing level in ratings 1-5 below to determine rating.

Teams with different caseload size caps should use the grid below. Find the caseload size cap for the team being evaluated, or the next higher caseload cap shown. The criteria (i.e., ranges of required direct clinical staff FTE for each rating) are listed along that row to the right.

² Similar to the calculation for OS1, in order to count part time or temporary staff, they must work exclusively with the ACT team for at least 16 hours a week (0.4 FTE) and attend the daily team meeting at least two times a week.

Supplemental Grid for Teams with a Caseload Cap Different than 50 or 100 Clients					
Caseload Cap Size	Rating				
	1	2	3	4	5
125	Fewer than 5.5 FTE	5.5 - 7.4 FTE	7.5 - 9.4 FTE	9.5 - 11.4 FTE	At least 11.5 FTE
120	Fewer than 5.5 FTE	5.5 - 7.3 FTE	7.4 - 9.2 FTE	9.3 - 11.1 FTE	At least 11.2 FTE
115	Fewer than 5.5 FTE	5.5 - 7.2 FTE	7.3 - 9.0 FTE	9.1 - 10.8 FTE	At least 10.9 FTE
110	Fewer than 5.5 FTE	5.5 - 7.1 FTE	7.2 - 8.8 FTE	8.9 - 10.5 FTE	At least 10.6 FTE
105	Fewer than 5.5 FTE	5.5 - 7.0 FTE	7.1 - 8.6 FTE	8.7 - 10.2 FTE	At least 10.3 FTE
100	Fewer than 5.5 FTE	5.5 - 6.9 FTE	7.0 - 8.4 FTE	8.5 - 9.9 FTE	At least 10.0 FTE
95	Fewer than 5.5 FTE	5.5 - 6.8 FTE	6.9 - 8.2 FTE	8.3 - 9.6 FTE	At least 9.7 FTE
90	Fewer than 5.5 FTE	5.5 - 6.7 FTE	6.8 - 8.0 FTE	8.1 - 9.3 FTE	At least 9.4 FTE
85	Fewer than 5.5 FTE	5.5 - 6.6 FTE	6.7 - 7.8 FTE	7.9 - 9.0 FTE	At least 9.1 FTE
80	Fewer than 5.5 FTE	5.5 - 6.5 FTE	6.6 - 7.6 FTE	7.7 - 8.7 FTE	At least 8.8 FTE
75	Fewer than 5.5 FTE	5.5 - 6.4 FTE	6.5 - 7.4 FTE	7.5 - 8.4 FTE	At least 8.5 FTE
70	Fewer than 5.5 FTE	5.5 - 6.3 FTE	6.4 - 7.2 FTE	7.3 - 8.1 FTE	At least 8.2 FTE
65	Fewer than 5.5 FTE	5.5 - 6.2 FTE	6.3 - 7.0 FTE	7.1 - 7.8 FTE	At least 7.9 FTE
60	Fewer than 5.5 FTE	5.5 - 6.1 FTE	6.2 - 6.8 FTE	6.9 - 7.5 FTE	At least 7.6 FTE
55	Fewer than 5.5 FTE	5.5 - 6.0 FTE	6.1 - 6.6 FTE	6.7 - 7.2 FTE	At least 7.3 FTE
50	Fewer than 5.5 FTE	5.5 - 5.9 FTE	6.0 - 6.4 FTE	6.5 - 6.9 FTE	At least 7.0 FTE
45	Fewer than 5.5 FTE	5.5 - 5.8 FTE	5.9 - 6.2 FTE	6.3 - 6.6 FTE	At least 6.7 FTE
40	Fewer than 5.5 FTE	5.5 - 5.7 FTE	5.8 - 6.0 FTE	6.1 - 6.3 FTE	At least 6.4 FTE
35	Fewer than 5.5 FTE	5.5 - 5.6 FTE	5.7 - 5.8 FTE	5.9 - 6.0 FTE	At least 6.1 FTE
30	Fewer than 5.5 FTE	5.5 FTE	5.6 FTE	5.7 FTE	At least 5.8 FTE

OS5 Program Size	1	2	3	4	5
	100-Client Team: Includes fewer than 5.5 FTE direct clinical staff.	5.5 - 6.9 FTE	7.0 - 8.4 FTE	8.5 - 9.9 FTE	100-Client Team: Includes at least 10.0 FTE direct clinical staff.
50-Client Team: Includes fewer than 5.5 FTE direct clinical staff.	5.5 - 5.9 FTE	6.0 - 6.4 FTE	6.5 - 6.9 FTE	50-Client Team: Includes at least 7.0 FTE direct clinical staff.	

OS6. Priority Service Population

Definition: ACT teams serve a specific, high service-need population of adults with serious mental illness and are able to make decisions about who is served by the team.

{1} The team has specific admission criteria, inclusive of schizophrenia & other psychotic disorders or bipolar I disorder, significant functional impairments, and continuous high service needs, and exclusive of a sole or primary diagnosis of a substance use disorder, intellectual development disorder, brain injury or personality disorders.

{2} The team/agency has the authority to be the gatekeeper on admissions to the team (including screening out inappropriate referrals} and discharges from the team.

Rationale: ACT is an evidence-based practice for people with serious mental illness, primarily those diagnosed with schizophrenia spectrum disorders, other psychosis, and bipolar I disorder. Further, given that ACT is a relatively expensive and scarce service resource, it should be available to persons whose needs for this level of intensity are greatest and who meet these diagnostic criteria. Since teams are working with clients in greatest need and who typically require tremendous staffing resources, it is imperative that there is some mechanism by which the team is involved in the decision to both admit and discharge clients from the team.

DATA SOURCES (* denotes primary data source}

Team Survey

See team responses to the following items:

#8: Does the team currently serve any clients who do NOT meet ACT admission criteria and/or are inappropriate for ACT? #9: Number of clients estimated to NOT meet ACT admission criteria:

Chart Review* - Chart Review Log Part II (p. 197-198}

Specify psychiatric diagnoses from client charts reviewed. In addition to excluding clients with diagnoses inconsistent with the definition for criterion #1 (please see above}, consider excluding those who have not otherwise specified (NOS} diagnoses when the prevalence of such diagnoses appears to be high. If, after conducting the chart review, several individuals have diagnoses that are questionably appropriate for ACT, consider requesting a complete list of all clients' psychiatric diagnoses to guide rating for this item.

Team Leader Interview*

Based on your response to the Team Survey, you indicated that approximately ____ people do not meet ACT admission criteria or are inappropriate for ACT.

Please tell me more about these

individuals (if reported to be "0," inquire as to how it is none}.

[Prompt for any clients who have a sole or primary diagnosis of a substance use disorder, intellectual development disorder, brain injury, or personality disorder. If chart review data indicate a higher number of clients with diagnostic profiles questionably appropriate for ACT, then ask the team leader if they can generate a report on all clients' diagnoses so that criterion #1 can be rated using a full sample]

What is the current process for screening referrals? Can you walk us through the “life of a referral”?

What happens if you think a referred client is inappropriate for ACT?

Do you generally feel like you have control over admissions? Why or why not?

Is there a way to discharge clients you think are inappropriate for ACT once you’ve admitted them to the team? [If yes] Can you describe this process?

Clinician Interview

Are there current ACT clients you feel do not meet the admission criteria? [If yes:] Why do you think they are inappropriate? [Differentiate between those who had been inappropriate throughout vs. those who became inappropriate due to some recovery.]

Psychiatric Care Provider Interview

Who are the most appropriate clients for ACT?

Can you give us examples of clients who would not be appropriate for ACT? [You are not necessarily seeking specific client examples, but example client symptoms, behaviors, functioning, scenarios that may reflect someone needing a less intensive or even more intensive service than ACT.]

What is your role in making sure the team is serving those who most need ACT services?

ITEM RESPONSE CODING

Rating Guidelines

Cross-reference team leader interview and chart review (primary data sources) with the clinician interview. Rate criterion #1 based on chart review data, unless team can report on diagnostic data across clients. Please refer to Table 3 below to determine credit.

Table 3. Priority Service Population

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: The team has specific admission criteria, inclusive of schizophrenia, other psychotic disorders, bipolar disorder I, significant functional impairments, continuous high service needs, exclusive of a sole or primary diagnosis of a substance use disorder, intellectual development disorder, brain injury, or personality disorders. ³	<p>Chart review client sample: More than 20% of clients <u>do not</u> meet diagnostic admission criteria.</p> <p>OR</p> <p>All clients: More than 10% of clients <u>do not</u> meet diagnostic admission criteria.</p>	<p>Chart review client sample: 80-89% of clients selected for chart review meet diagnostic admission criteria.</p> <p>OR</p> <p>All clients: 90-94% of clients meet diagnostic admission criteria.</p>	<p>Chart review client sample: 90% or more of chart sample meet diagnostic admission criteria.</p> <p>OR</p> <p>All clients: 95% or more meet diagnostic admission criteria.</p>
Criterion #2: The team/agency has the authority to be the gatekeeper on admissions to the team (including screening out inappropriate referrals) and discharges from the team.	The team is not the gatekeeper for admission and discharges and may be compelled to admit clients who are not appropriate for ACT (i.e., there are few options for appealing or rejecting referrals to the team).	The team reports that they are the gatekeeper for admissions and discharges, yet there appear to be some exceptions (e.g., they report instances when they felt like they were "forced" to admit an inappropriate client}. Alternatively, team may have less gatekeeper authority, but have an appeal process that bolsters their position to have a final say on who it is they serve.	The team indicates that they generally provide the final say in admissions to, and discharges from, the team, and there is typically minimal external pressure to admit or keep clients on their caseload.

OS6 Priority Service Population	1	2	3	4	5
	The team at least PARTIALLY meets criterion #2 only OR does not meet either criterion.	The team PARTIALLY meets criterion #1 only.	The team PARTIALLY meets criterion #1, and at least PARTIALLY meets criterion #2.	The team FULLY meets criterion #1, and PARTIALLY meets criterion #2.	The team FULLY meets both criteria.

³ Use Chart Review Tally Sheet I or TMACT Calculation Workbook to calculate the percentage of clients who did not appear to be appropriate for ACT given their diagnostic profile.

OS7. Active Recruitment

Definition:

- (1} The team (or its organizational representative} actively recruits new clients who could benefit from ACT, including assertive outreach to referral sites for regular screening and planning for new admissions to the team.
- (2} The team is primarily comprised of clients from referral sources and sites outside of usual community mental health settings (e.g., state & community hospitals, ERs, prisons/jails, shelters, street outreach).
- (3} The team works to fill open slots when they are not at full capacity and/or the client-to-staff ratio is well below 10:1 on more mature teams.

Rationale: ACT is best suited for clients who do not effectively use less intensive mental health services. Reliance on passive approaches to client recruitment using typical mental health organizational intake systems or internal referrals does not typically ensure that the most suitable persons are served. Teams typically need to actively recruit in community settings outside of a parent agency to ensure that ACT services are offered to persons in their region who are most suited to using them. Since ACT is also a scarce resource, it is important for teams to work at full capacity.

DATA SOURCES (* denotes primary data source}

Team Survey*

Item #7a: Number of clients currently enrolled on the team:

Item #7b: Number of clients the team is equipped to serve at capacity (Clarify current capacity, which may be intentionally staggered given team development plans):

Item #10: Current number of clients who had been "stepped up" from less intensive services within the agency when they were referred to ACT:

Team Leader Interview*

Who makes referrals to the team?

What recruitment procedures do you use to find clients for the ACT team, especially those most in need of this service? In what ways does the team conduct outreach and engagement for recruiting new clients or collaborate closely with separate outreach programs? What venues are visited for outreach (prompt for a range of places, including shelters, jails, other homeless outreach programs)?

(If the team is at capacity, and therefore is hesitant to actively seek out individuals who may need ACT but who would end up waitlisted, is there evidence that the team works to maintain relationships and warm contacts at potential referral sites [e.g., can they name warm contacts at various sites, do they have an advisory board or steering committee with representatives from potential referrals sites, etc.]?)

How many open slots are there on your team?

ITEM RESPONSE CODING

Rating Guidelines

Use the team leader interview and survey as primary data sources for rating. Please refer to Table 4 to determine if criteria are met at all, partially, or fully. NOTE: If the ACT team shares outreach and recruitment services within a parent agency or there is another mechanism by which referrals occur (e.g., a managed care organization), evaluate these collective efforts.

Table 4. Active Recruitment

Criteria	Examples/Guideline		
	No Credit	Partial Credit	Full Credit
Criterion #1: The team (or its organizational representative) actively recruits new clients who could benefit from ACT, including assertive outreach to referral sites for regular screening and planning for new admissions to the team.	The team does not build relationships with relevant referral sources; existing relationships are only happenstance and not actively maintained.	<p>The team is not at capacity, and the team is sporadic with their recruitment activities (e.g., focusing solely on one or two single sources, not fully canvassing their area for relevant referral sources).</p> <p>The team is at capacity, and there is weak evidence for the team's persistence in maintaining warm relationships with relevant referral sources, and/or the team has no organized mechanism for prioritizing admissions to the team.</p>	<p>The team is not at capacity, and the team regularly visits specific referral sources for outreach and relationship-building, to include community inpatient units, emergency and crisis programs, jails, shelters, and, where available, system-wide community meetings where various referral sources meet regularly. The team conducts regular screening and planning for new admissions. Non-ACT staff (e.g., local government entity, or agency administration) may perform these outreach functions on behalf of the team; however, the team must still actively build and maintain relationships with common and/or anticipated referral sources.</p> <p>The team is at capacity, and there is a mechanism for prioritizing admissions to the team (e.g., waiting list) to ensure that new clients can be admitted to the team once there is an open slot. Also, if at full capacity, there may be less of a need to conduct community outreach for the purpose of identifying potential ACT clients, but there is clear evidence that the team has developed and actively maintains positive relationships with referral sites (e.g., can name "warm contacts" at various referral sites, such as local shelters, jail, hospitals, other non-profit organizations, etc.).</p>
Criterion #2: The team is primarily comprised of clients from common referral sources and sites outside of usual community mental health	Less than 50% of clients were referred from outside agencies/referral sources or a more	50 - 74% of clients served by the team were referred from outside	The team caseload is comprised of at least 75% of clients from outside agencies/referral sources or from within more restrictive programs administered by the parent agency (e.g., mobile crisis

Table 4. Active Recruitment

Criteria	Examples/Guideline		
	No Credit	Partial Credit	Full Credit
settings (e.g., state & community hospitals, ERs, prisons/jails, shelters, street outreach} or more restrictive agency programs. ⁴	restrictive program within the parent agency vs. less restrictive programs within the parent agency.	agencies/referral sources or more restrictive programs within the parent agency.	team, critical time intervention} vs. less restrictive programs administered by the parent agency (e.g., adult case management program}.
Criterion #3: The teams work to fill open slots when they are not at full capacity and/or the client-to-staff ratio is well below 10:1 on more mature teams.	The team has fewer than 90% of slots filled.	The team has 90-94% of slots are filled.	At least 95% of slots are filled. If the team is <u>at least two years old</u> , the client-to-staff ratio is no less than 6:1. Note: It is important to clarify with team what their current, not ultimate, caseload cap is.

	1	2	3	4	5
OS7 Active Recruitment	The team PARTIALLY meets 1 criterion or less.	1 criterion is FULLY met (2 are absent} OR 2 criteria met, with both criteria PARTIALLY met OR 1 criterion is PARTIALLY met and 1 FULLY met (1 is absent}.	2 criteria are FULLY met (1 is absent} OR ALL 3 criteria are met, with 2 or 3 PARTIALLY met.	ALL 3 criteria are met, with 2 FULLY and 1 PARTIALLY met.	ALL 3 criteria are FULLY met.

⁴ See the Team Survey response #10 to calculate the percentage of clients referred from less restrictive programs within the agency.

OS8. Gradual Admission Rate

Definition: The team admits new clients at a low rate to maintain a stable service environment.

Rationale: To provide consistent, individualized, and comprehensive services to clients, a low intake rate is necessary. Taking on too many new clients at once can be disruptive to the services that current clients receive and contribute to staff stress and burnout.

DATA SOURCES (* denotes primary data source)

Team Survey

See item #11: Highest number of admissions per month in the past 6 months:

Team Leader Interview*

Briefly review and confirm number of admissions reported in the Team Survey item #11.

Excel spreadsheet (Second column)

Cross-check the number of clients the team indicated as having enrolled in the team within the past 90 days with their reported highest enrollment in a single month in the past six months (i.e., no more than 12 individuals should be noted as recent enrollees if team did not exceed four per month; inquire about apparent discrepancies).

ITEM RESPONSE CODING**Rating Guidelines**

If the highest monthly intake rate during the last six months was no greater than four clients, the item is rated as a "5."

NOTE: A team may receive some pressure to enroll a higher number of people in a short amount of time, such as when a new team is building to a capacity, or is absorbing another team's caseload. Although this information may guide feedback in the report, it should not alter the rating itself.

Notes:

	1	2	3	4	5
OS8 Gradual Admission Rate	Highest monthly admission rate in the last 6 months is greater than 15 clients per month.	12 -15	8 - 11	5 - 7	Highest monthly admission rate in the last 6 months no greater than 4 clients per month.

OS9. Transition to Less Intensive Services**Definition:**

- (1) The team conducts a regular assessment of the need for ACT services;
- (2) The team uses explicit criteria or markers to assesses need to transfer to less intensive service option;
- (3) Transition is gradual & individualized, with assured continuity of care;
- (4) Status is monitored following transition, per individual need; and
- (5) The team expedites re-admission to the team if necessary.

Rationale: Although some individuals may experience an increase in symptoms and greater functional impairments without ACT, therefore requiring longer-term ACT services, many individuals also get better over time and are able to graduate from ACT to a less restrictive community program. As supported by research, programs should have an explicit process for assessing the appropriateness of graduation and for making the transition for those ready to graduate.

DATA SOURCES (* denotes primary data source)**Team Survey**

Refer to response to item #12. Note whether the team has transitioned any clients to less intensive services in the past year:

Team Leader Interview*

[If there were no transitions to less intensive services in the past year, then ask the following and then continue with remaining questions]: ***I see you didn't have any transitions to less intensive services over the past year. Why do you think that is? How many transitions did you have the prior year?***

[If there were transitions, inquire about those clients when asking below questions.]

How do you assess clients in their readiness to graduate from ACT because they are doing better? On what basis do you determine ongoing need for ACT services? Can you summarize any established criteria that help you to determine whether someone is ready for transition to less intensive services? How often do you conduct these assessments?

What process do you follow to transfer clients to less intensive services? [Prompt for whether they gradually transition clients, how much contact they have with the transition program, whether they continue to follow clients after transition from ACT and if so, for how long.]

<p>Can you describe a typical transition plan? [Prompt for gradually decreasing number of visits, more office-based contacts, seeing fewer team members, picking up medications at the pharmacy.]</p> <p><i>To what services do clients transition? Under what circumstance would the team maintain contact with clients and/or the new service provider following transition? For how long?</i> [Probe for whether contacts with clients were team or client initiated; probe for how it is determined which clients get more extensive follow-up.]</p> <p><i>If a previously graduated client needs to return to the team, what would that process entail? When would the team commence services?</i> [Prompt for the following: <i>Are they put back on the waitlist first or quickly re-admitted? Can the team begin serving the participant without immediate assurance of payment?</i>]</p> <p><i>In the past two years, can you think of a client whose transition process best reflected the work of the team, and summarize the team's work with us?</i></p>	
Clinician Interview	
<p><i>When do you start discussing transition from ACT with clients?</i></p> <p><i>What markers or indicators for transition are you assessing and considering?</i></p>	

<p><i>If clients have transitioned from your team to less intensive services, how was that decision made?</i> [Probe for assessment criteria used and whether there were any external initiatives or pressures that played a role in the decision to transition specific clients.]</p> <p><i>To what services did they transition? Under what circumstance would the team maintain contact with clients and/or the new service provider following transition? For how long?</i> [Probe for whether contacts with clients were team or client initiated; probe for how it is determined which clients get more extensive follow-up.]</p>	
---	--

ITEM RESPONSE CODING

Rating Guidelines

See Table 5 to determine if criteria were met at all, partially, or fully. Use the team leader interview as the primary data source. Cross-reference with information from the chart review and clinician interview.

Rating guidelines for teams that do not identify any clients who have transitioned to less intensive services over the past two years: If the team has not transitioned anyone in the past two years, it may be due to their current stage of development (newly implemented teams) or due to their not meeting criterion #1 and/or #2. If no recent examples of transition to less intensive services are available, assess criteria #3-5 based on the team leader's response to what the team plans to do when they transition clients from the team to less intensive services. Do they have a specific protocol or policies on how to handle these transitions, including gradual transition, continued follow-up, and re-admission to the team, if needed? For established teams that have not transitioned anyone, there should be compelling data speaking to intentions if considering ratings higher than partial rating criteria.

Table 5. Transition to Less Intensive Services

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: The team conducts regular assessment of need for ACT services.	The team does not assess for transition readiness. Recent transitions did not result from the team's proactive assessment efforts.	The team does assess for the clients' need for ACT services, but this practice is not systematic and/or formalized (e.g., or no documentation is made or not tied to established processes around planning and authorizations).	Team members regularly assess for client readiness for transition to less intensive services, including improvement across areas of clinical and role functioning, as indicated in client charts. To further support "full credit" practice, one or more of the following are noted: <ul style="list-style-type: none"> The team includes a discussion about clients' readiness for transition from ACT as part of their regular treatment plan reviews. This is supported by documentation in the charts; and/or

Table 5. Transition to Less Intensive Services

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
			<ul style="list-style-type: none"> The team may use a level of care system to categorize client readiness for transition and regularly review as a team or in each ITT;
<p>Criterion #2: The team uses explicit criteria or markers for need to transfer to less intensive service option.</p>	<p>The team is not able to present relevant and explicit criteria or markers indicating a need to transfer to less intensive services.</p>	<p>Transition readiness criteria do not appear to be explicit (e.g., inconsistent reports across team members}. OR, the criteria themselves have questionable utility (e.g., narrowly focusing on medication adherence and hospitalizations only). They may complete a standardized assessment tool, but it isn't <u>used</u> to guide routine review.</p>	<p>Criteria need to be well-specified so that all team members would be able to objectively identify when a client is ready for transition to less intensive services. Ideally, a standardized assessment tool is used to guide routine review.</p> <p>Markers or criteria may include the following:</p> <ul style="list-style-type: none"> Use of fewer or less intensive services such as hospitals or emergency rooms; AND More independent functioning and/or improvement in major domains (e.g., housing, treatment participation, psychiatric medication use, psychiatric hospitalization/crisis management, forensic involvement, substance use, high-risk behaviors, ADL, community integration}.
<p>Criterion #3: Transition is gradual & individualized, with assured continuity of care.</p>	<p>Transitions appear abrupt and there is little effort to promote continuity of care.</p>	<p>There is little time between identifying client as ready for transition and actual transition, and/or efforts to prepare client and lay road for service continuity are lacking (e.g., there is limited contact with the transition service provider before the client is discharged}. The process itself is not individualized; there is a one size fits all approach. Also, transitions may appear unnecessarily long for most clients.</p>	<p>Period between identification of transition readiness and actual transition should be individualized, considering the need for time to prepare for the transition (e.g., three to six months}, while also not unnecessarily prolonging transition. Examples of gradual individualized transitions include:</p> <ul style="list-style-type: none"> Gradual transition may begin with a "Transition Group" within the ACT team, comprised of other ACT clients who are getting ready for transition from ACT to less intensive services. Client may try out services in another program for brief periods of time (e.g., a few hours or one day} while still receiving ACT services. Team should have some mechanism for communicating with transition service provider to ensure continuity of care.
<p>Criterion #4: Status is monitored following transition, per individual need.</p>	<p>The team does not monitor client status following transition. Communications with the team appear to be initiated primarily by the client</p>	<p>Monitoring of clients' status following transition appears to be inconsistent (e.g., examples are limited, and/or primarily reflect clients' initiating contact with the team}. OR</p>	<p>The need for post-discharge monitoring will vary across clients. However, it is assumed that at least some will clearly benefit from such follow-up.</p> <ul style="list-style-type: none"> Team continues to communicate with transition service provider regarding client's status (e.g., up to three months}. <u>Note</u>: These do not have to be formal meetings, but there needs to be at least some form of checking in on the client's status.

Table 5. Transition to Less Intensive Services

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
	and/or transition provider.	Teams take a one size fits all approach to follow-up (e.g., every client is followed for up to three months regardless of need}	<ul style="list-style-type: none"> If needed, team members visit client to assess status in less intensive services after transition from ACT.
<p>Criterion #5: The team expedites re-admission to the team if necessary.</p>	<p>Once discharged, previously served ACT clients are not able to re-enroll; OR they must follow typical enrollment procedures.</p> <p>Enrollment is not expedited; OR the team is precluded from re-admitting the client because of larger system barriers (e.g., the client no longer meets admission criteria even though returning back to the team, even for a brief period, would be helpful to him or her}.</p>	<p>Policies and procedures are in place to expedite re-enrollment, however there still appears to be considerable lag time (e.g., these clients are moved to the front of the waitlist, but can remain waitlisted for months); OR</p> <p>Clients who transition to less intensive services have the option to return to the team, depending on whether the team is at full capacity at the time.</p>	<p>Re-enrollment of formerly transitioned clients should be expedited.</p> <p>The team may reserve one-to-two slots for re-enrollment of clients who transition from the program for a limited period (e.g., three months post-discharge from ACT); and/or</p> <ul style="list-style-type: none"> Former ACT clients who need to be re-admitted do not have to be placed on a waiting list (e.g., the team is able to exceed capacity to accommodate a client who needs to be re-admitted}. Where ACT eligibility criteria are listed, recently transitioned clients may return to ACT even if not meeting listed entrance criteria.

OS9 Transition to Less Intensive Services	1	2	3	4	5
	Up to 1 criterion is met OR 2 criteria are met, with 1 or 2 PARTIALLY met.	2 criteria are FULLY met (3 are absent} OR 3 criteria are met, with 1 to 3 PARTIALLY (2 are absent}.	3 criteria are FULLY met (2 are absent} OR 4 criteria are met, at least PARTIALLY (1 is absent}.	4 criteria are FULLY met (1 is absent or only partially met}.	ALL 5 criteria are FULLY met.

OS10. Retention Rate

Definition: The team retains a high percentage of clients given that they enroll clients appropriate for ACT, utilize appropriate engagement techniques, and deliver individualized services. Referral to a more restrictive setting/program would normally be considered an adverse outcome.

Rationale: Teams that admit the intended population for ACT and are serving them well (i.e., engagement, building rapport, meeting service needs) should be able to retain the vast majority of their caseload within a year's time. Discharges to other institutional settings (e.g., hospitals, nursing homes, group homes) may be warranted in some cases, but may also reflect poor selection, engagement, and service provision. A low retention rate can also reflect broader systemic issues beyond the control of the team, such as an external authority insisting the team serve individuals who may not be appropriate for ACT or a managed care company denying authorization for ACT services for clients who clearly need ACT.

DATA SOURCES (* denotes primary data source)

Team Survey*

Refer to responses on the following survey items, and transfer to Table 6 below:

#7a: Number of clients currently enrolled:

#7c: Number of clients enrolled one year ago:

#12: Number of clients discharged from the ACT team for listed reasons:

Team Leader Interview*

Tell me more about those clients listed who were transferred to more restrictive settings due to medical, health, or safety reasons. What was the team's role in that process? [Note: The default is to include all clients within the numerator count (i.e., 'drop-outs'), however evaluator may judge to not count select cases if it is very clear that the clients' transfers were due to legitimate clinical/health reasons that exceeded the team's ability to appropriately care for their needs.]

Please tell me more about any others listed on the survey who were discharged (not due to death or graduation). What was the team's role in that process? [If anyone is listed as discharged due to an authorization denial, clarify if team went through an appeals process]

Were any of the individuals listed as being discharged later re-admitted to the team (e.g., re-enrolled following release from jail)? [Exclude from the final drop-out count anyone who has since been re-admitted to the team.]

ITEM RESPONSE CODING

Inclusion and Exclusion Criteria (Refer to Table 6, cross-walking and confirming Team Survey data):

Table 6. Retention Rate Calculation: Who Constitutes a “Drop Out”?

Reason for Discharge/Disenrollment in the Past Year:	Considered a “Drop Out”?	Transferred Team Survey Item #12	Final “Drop Out” Count
Unable to locate client	YES		
Incarcerated	YES (exclude if person is since re-enrolled to team)		
Discharged as a result of not receiving authorization from managed care organization	YES. Exception is <u>up to one</u> client may be excluded as a "drop out" if there is convincing evidence that the team put forth significant effort to appeal the authorization denial.		
Transferred to a more restrictive service setting (e.g., hospital, nursing home, residential treatment center) ²	YES. Exception is if there is convincing evidence that the client had significant medical needs and/or safety concerns that went beyond the team's <i>reasonable</i> ability to address.		
Refused services and/or requested discharge	YES		
Moved out of service area	YES. Exception is if the team had knowledge of the move and assisted with the service transfer.		
Other (specify):			
Transitioned to less intensive services/graduated	NO	n/a	n/a
Deceased	NO	n/a	n/a

Formula	$1 - \left[\frac{\text{\# client "Drop-Outs" in the past year}}{\text{\# clients currently enrolled} + \text{\# clients enrolled 1 year ago}} / 2 \right] \times 100$
----------------	--

Rating Guidelines	Refer to data provided in the Team Survey (items 7a, 7c, and 12). Reference these numbers when asking the team leader for a description of each client who left the team. Then determine who constitutes a drop out by using Table 6 and the formula above.
--------------------------	---

	1	2	3	4	5
OS10 Retention Rate	Less than 65% of the caseload is retained over a 12-month period.	65 - 76%	77 - 86%	87 - 94%	95% or more of caseload is retained over a 12-month period.

OS11. Involvement in Psychiatric Hospitalization Decisions

Definition: The ACT team is closely involved in psychiatric hospitalizations and discharges. This includes involvement in the decision to hospitalize the client (e.g., activating a crisis plan to employ alternative strategies before resorting to hospitalization, assessment of need for hospitalization, and assistance with both voluntary and involuntary admissions}, contact with the client during their hospital stay, collaboration with hospital staff throughout the course of the hospital stay, as well as coordination of discharge medications and community disposition (e.g., housing, service planning).

Rationale: To ensure more appropriate use of psychiatric hospitalization and continuity of care, it is essential for the ACT team to be involved in hospitalization decisions and processes, which includes efforts to help the client avoid hospitalization by accessing other less restrictive alternatives and facilitating appropriate admissions. Ongoing ACT team participation during a client's hospitalization and discharge planning allows the team to help maintain community supports (e.g., housing} and continuity of service in the community.

DATA SOURCES (*denotes primary data source}**Team Survey***

Refer to item #14 and extract the last ten psychiatric hospitalization events. An "event" is defined as either an admissions or discharge from a psychiatric hospital.

Team Leader Interview****Tell me more about the team's involvement in the last ten hospitalization events.***

[Go through each of the most recent client psychiatric hospitalization events reported in the Team Survey and determine what role the team played in each by using Table 7 for guidance on whether to give credit for team involvement in each admission or discharge. Use below Table 7 to record the last ten events (e.g., #5 Admission; #5 Discharge; #7 Admission; #8 Admission; #8 Discharge} and then note if credit was granted or not given description.]

Table 7. Examples of Team Involvement with Psychiatric Hospitalization Decisions		Client ID & Event Type	Credited	Not credited
Hospital Admissions	<ul style="list-style-type: none"> • Activating a crisis plan to employ alternative strategies before resorting to hospitalization • Assessing need for hospitalization • Actual facilitation of hospitalization (voluntary or involuntary} • Coordinating with natural supports or other providers to determine need for hospitalization, which was then facilitated by others • Consulting with hospital staff at time client presents for admission • Providing on-site evaluation of the client at the time of presentation to the ER • Prompt contact with hospital staff upon learning that the client had been hospitalized (within 24 hours of admission} to help coordinate care 			
Hospital Discharges	<ul style="list-style-type: none"> • Involvement in the coordination of care/visiting the client during his or her stay • Assessing readiness for discharge • Coordinating dispositional placement (i.e., housing}, discharge medications/services • Actual facilitation of discharge, including transportation from the hospital 			

Inclusion Criteria

Include all psychiatric hospital admission and discharge events in this count. An "event" is defined as either an admission or a discharge from the hospital.

Rating Guidelines

Use the team leader interview and your review of the ten most recent psychiatric hospitalization events reported in the Team Survey as the primary data sources for rating this item.

Please refer to Table 7 to judge whether the team's report of involvement in each hospitalization event is counted in this rating. If team involvement does not reflect a range of efforts to coordinate and/or facilitate psychiatric hospitalization admissions (e.g., primarily just being responsive within 24 hours of client admission) or discharges (e.g., only providing transportation home from the hospital), with no other examples, rate down by one score. Use some discretion in determining which "events" are considered (e.g., a transfer from one hospital to another hospital may not need to count as two distinct events for this item - one discharge to another admission).

	1	2	3	4	5
OS11. Involvement in Psychiatric Hospitalization Decisions	The team is involved in fewer than 15% of admissions & discharges.	The team is involved in 15% - 44% of admissions & discharges.	The team is involved in 45 - 69% of admissions & discharges.	The team is involved in 70% - 89% of admissions & discharges.	The team is involved in 90% or more admissions & discharges.

OS12. Dedicated Office-Based Program Assistance

Definition: The team has 1.0 FTE of office-based program assistance available to facilitate the day's operations in a supportive manner for the team, clients, natural supports, and other ancillary service providers (e.g., landlords, social security). Primary functions include the following:

- (1) Providing direct support to staff, including monitoring & coordinating daily team schedules and supporting staff both in the office and field;
- (2) Serving as a liaison between clients and staff, such as attending to the needs of office walk-ins and calls from clients/natural supports; and
- (3) Actively participating in the daily team meeting.

Rationale: ACT services are primarily community-based and team activities may change based on emerging client service needs. As a result, it is important for there to be a staff function to include centralized, office-based communication and coordination across team members and clients to promote continuity of care.

DATA SOURCES (* denotes primary data source)

Team Survey

Refer to item #1 before interviewing team leader, noting whether the team currently has 1.0 FTE program assistant assigned.

Team Leader Interview* or Program Assistant

[Clarify how many people share this role, especially if it appears to be shared across staff in a given day. Also clarify the extent to which the person dedicated to this role has other responsibilities, especially those that are non-ACT program activities and/or involve community-based work.]

Is someone available in the office during the day, such as a program assistant and/or shift manager? [If yes]: ***What is their role on the team? To what extent does this person act as a liaison between team members and clients/their natural supports? What about among team members—does this role help them to stay in touch throughout the day?***

If (team member) is out in the field assigned to see a client who really needs to be seen, but that client is not home at the time, what steps, if any, would the team member take next? [Listen for the extent to which the team member relies on the office-based person to help with rescheduling that contact, such as with another team member who is in that area later in the day.]

How many hours a day/days a week, is someone available to serve in this capacity? [This may be a straightforward FTE if an office-based program assistant dedicated to the team. If the team uses a shift manager, it is important to determine the estimated FTE for this role.]

Does this person participate in the daily team meeting?

[If yes]: **How often and what role do they serve at the meeting?** [Can you give me examples of where the program assistant also provided updates during the meeting, such as phone calls received, encounters with clients or natural supports, etc.?)

[If no]: **Do you ever give the program assistant important clinical updates based on reports in the daily team meeting?** [Seek examples]

Direct Observation

During the process of conducting the fidelity review, it is likely that there will be many opportunities to observe the role of the program assistant and to directly interact with them. Pay attention to the extent to which the program assistant fulfills all specified roles over the course of the review

ITEM RESPONSE CODING

Rating Guidelines

Use Table 8 to determine whether the criteria for this item are met fully or partially.

- The team has 1.0 FTE office-based program assistance. More than one staff person may fulfill the function; however, no more than two staff are appointed to fill this role each day (i.e., the role should not be divided among several staff over the course of one day).
- If two people fill this role, assess based on the extent to which an adequate communication mechanism is in place between these two people to ensure continuity of coordination and care. Note that the minimal team inclusion expectations described in OS1 may not apply here.
- The designated program assistant should be *office-based* so that both functions are adequately fulfilled.
- Meeting these functions is the primary responsibility for the designated program assistant, not secondary to other administrative responsibilities.
- Do not count if the program assistant is technically employed by the team but has been on extended leave for three months or more.

Table 8. Dedicated Office-Based Program Assistance

Functions	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #1: Provides direct support to staff, including monitoring & coordinating daily team schedules and supporting staff in the office and field.	There is no team member providing program assistance or their role is primarily administrative or clerical.	Team member(s) providing program assistance sometimes provide direct support to staff, but are less consistent in this role. Some administrative or clerical duties may take priority; fulfilling this function is secondary to administrative and clerical tasks.	This office-based team member has a role in developing and/or managing the daily staff schedule and updating it based on reports in the daily team meeting as well as staff vacations/leave. They take responsibility for assisting team members with various clients' appointments and case management tasks, such as arranging clients' medical and housing appointments and working with landlords. They also assist and support field-based staff (e.g., rescheduling another staff to see a client who is absent during contact; looking up address for a client doctor's appointment). Meeting this function is the primary responsibility for the designated program assistant, not secondary to other administrative or clerical responsibilities.
Function #2: Serves as a liaison between clients and staff, such as attending to the needs of office walk-ins and calls from clients/natural supports.	There is no team member providing program assistance or their role is primarily administrative or clerical.	Team member(s) providing program assistance sometimes work with clients and supports by phone and in-person, but are less consistent in this role. Some administrative or clerical duties may take priority; fulfilling this function is secondary to administrative and clerical tasks.	This office-based program assistant actively works directly with clients and natural supports by phone and in-person. The team relies on program assistant to be in the office to attend to emerging needs throughout the day. Examples include the following: <ul style="list-style-type: none"> • Responding to walk-ins, including figuring out medication refills with the team nurses and disbursement of funding; • Handling calls from clients' family members and natural supports; or • Contacting other team members when needed to assist with response to walk-ins and/or phone calls or to update them.
Function #3: Actively participates in the daily team meeting.	Team member(s) providing program assistance do not regularly attend the daily team meeting. Rating cannot be higher than a "3" on this item.	Team member(s) providing program assistance on the team regularly attend the daily team meeting, but do not take an active role (e.g., sits to the side taking notes or documenting in the log, but not reporting on contacts with clients).	Team member(s) providing program assistance on the team are engaged and contribute to the daily team meeting on a regular basis. They report on recent contacts with clients and natural supports in that meeting. They may also play a role in updating the log, daily staff schedule, or other tools/paperwork related to planning program contacts.

	1	2	3	4	5
OS12. Dedicated Office-Based Program Assistance	Less than 0.50 FTE program assistance is available to the team OR 0.50 - 1.0 FTE program assistance is available, but not meeting rating "2" performance.	0.50 - 0.99 FTE program assistance is available, at least PARTIALLY performing 2 functions OR 1.0 FTE program assistance is available and performing 1 function ONLY.	0.50 - 0.99 FTE program assistance is available, at least PARTIALLY performing ALL functions OR 1.0 FTE program assistance is available, at least PARTIALLY performing 2 functions.	1.0 FTE program assistance is available, at least PARTIALLY performing ALL functions.	1.0 FTE program assistance is available, FULLY performing ALL functions.

CT1. Team Leader on Team

Definition: The team has 1.0 full-time (i.e., works 40 hours a week) team leader with full clinical, administrative, and supervisory responsibility to the team. The team leader has no responsibility to any other programs during the 40-hour workweek. The team leader must have at least a master's degree in social work, psychology, psychiatric rehabilitation, or a related clinical field, a license in their respective field, and at least three years of experience in working with adults with severe mental illness. Team leader cannot fill more than one role on the team.

Rationale: This key position on the team requires 100% devotion to the ACT program without responsibility to other service programs. To effectively lead the team in providing high quality clinical care, the team leader is expected to be a trained clinician. More advanced clinical training typically occurs during graduate-level education. State licensure and/or certification in one's clinical field helps to ensure that a minimal standard of training and knowledge of practice and ethics has been met and is being maintained with license renewals.

DATA SOURCES (* denotes primary data source)

Team Survey*

Refer to responses on item #1 related to the team leader's educational degree, licensure status, level of training, and experience in working with this population.

Team Leader Interview

Do you have any agency responsibilities outside of the ACT team (e.g., screening potential agency enrollees across programs, triaging with hospital staff for all agency clients, providing therapy to non-ACT clients)? If so, please estimate how much of your time is spent in those activities in a given week. [Clarify the extent to which these non-ACT activities detract from ACT responsibilities, and adjust FTE accordingly, as opposed to non-ACT activities conducted in addition to ACT responsibilities, resulting in a 40+ hour work week with no clear indications that ACT responsibilities are negatively affected.]

Do you currently fulfill another position or role on the team (e.g.1 filling in for another staff vacancy)?

ITEM RESPONSE CODING

Rating Guidelines

The team leader position is assumed by only one person. Minimal qualifications: Master's degree in social work, psychology, psychiatric rehabilitation, or a related field. At least three years of experience working with individuals with severe mental illness. To rate a "5," the team leader must also be licensed within their respective clinical field (note that provisional licenses do not count as meeting minimal qualifications).

Full-time commitment to the team: One individual assigned to work full-time (40 hours a week) with the team, with virtually no commitments to agency endeavors/services unrelated to ACT (e.g., less than two hours a week). Estimate actual FTE committed to the team given other non-ACT agency responsibilities.

If the team leader's time is split between team leader and another team member's roles (e.g., nursing activities, integrated treatment for COD) due to staff shortages, estimate FTE time given actual commitments to those other non-team leader roles. Reduce FTE to rate this item and credit appropriately in another item (e.g., ST5. Role of Employment Specialist in Services), if applicable. Note that some specialty functions, such as integrated treatment for COD, may be an appropriate use of direct clinical time and should not count against team leader's FTE.

Special case: Do not count if they are technically employed by the team but have been on extended leave for three months or more.

	1	2	3	4	5
CT1. Team Leader on Team	Less than 0.25 FTE team leader OR less than 0.75 FTE team leader with inadequate qualifications.	0.25 - 0.74 FTE team leader who meets at least minimal qualifications.	0.75 - 1.0 FTE team leader who does not meet minimal qualifications for education and experience	0.75 - 0.99 FTE team leader who meets at least minimal qualifications OR 1.0 full-time team leader who meets all qualifications except having a clinical license.	1.0 FTE team leader who meets at least minimal qualifications, including licensure, and has full assigned responsibility to the team.

CT2. Team Leader is Practicing Clinician

Definition: In addition to providing administrative oversight to the team, the team leader performs the following functions:

- (1} Directly providing services as a clinician on the team; and
- (2} Delivering consistent clinical supervision to ACT staff.

Rationale: Research has shown that a practicing team leader is strongly related to better client outcomes. Clinical supervision has also been found to be a critical element of successful uptake and sustainability of evidence-based practice (EBP). Team leaders who also have direct clinical contact are better able to model appropriate clinical interventions and provide quality supervision, as well as remain in touch with the clients served by the team.

DATA SOURCES (* denotes primary data source}

Team Survey

Refer to the response to #5 and note how many hours per week team leader spends providing direct services:

Refer to the response to #6 and note how often the team leader provides clinical supervision to the two staff most in need, and seek to confirm if meeting with those two team members:

Productivity Records*

Some agencies require staff to keep track of direct service time. Ask if this applies at this agency, and ask to see the information for the last calendar month (or some similar unit of time). Make sure that the chosen period is typical (e.g., exclude a week in which the center was undergoing JCAHO or CARF accreditation).

Supervision Records*

Examine documentation of supervision provided by the team leader, including supervision records and previous sign-up sheets that staff use to specify their need for supervision.

Team Leader Interview

I see that you reported (# of hours of direct clinical work). How did you come to calculate this number? [If the number is clearly high (8+ hours), inquire how it came to be so high. If clearly low (under five hours), inquire why it is so low.]

Are you assigned as the “primary” care provider or coordinator for any of the clients, or serve on ITTs?

[If yes]: ***For how many? How was it decided that you would serve as the primary for these clients (e.g., individuals who needed more psychotherapy), or on their ITTs?*** [This additional information provides context for the number of direct hours reported in Team Survey.]

Tell me about your approach to clinical supervision. How often do you provide it? How long is it typically provided each time? What tends to be the focus of supervision? [Parse out the time spent during brief, drop-in supervision vs. scheduled time and impromptu supervision that is at least 20 minutes in length.]

[Refer to the staff names on the Team Survey reported to receive the most supervision.] **What does supervision look like for [insert name]?** Where does it take place? Is it scheduled? How often does it occur? Does it occur in a group or individually? [Prompt for how well targeted the team leader's overall plan for supervision is, including titrating effort and attention according to need and capacity, how they ensure that supervision needs are met within the team (in a group or individually), and whether supervision is always directly undertaken by the team leader.]

What areas of education or training do you think would be helpful for you to do an even better job in your role?

Clinician Interview

Tell me about the type of clinical supervision you typically receive from the team leader.

COD/Employment Specialist/Peer Specialist Interviews

Tell me about the type of clinical supervision you typically receive from the team leader.

ITEM RESPONSE CODING

Inclusion Criteria**Rating for Direct Services:**

Give more weight to the actual records than the verbal report, unless records are unavailable. If there is a discrepancy, then ask the team leader to help you understand it.

Direct service hours may include the following:

- Face-to-face contacts with clients and/or natural supports, whether alone or with other staff;
- Phone contacts with clients and/or natural supports;
- Team leader participation in treatment planning meetings in which a client and/or natural support is present; and
- Team leader participation in initial and comprehensive assessments.

Note: An excessively high number of direct service hours (e.g., 16+ hours per week) does not necessarily reflect best practice, as it indicates that the team leader is employed more as a direct care staff than a team leader, administrator, and supervisor. If a high number of hours are reported, inquire for the reason and provide qualitative feedback in the report. An excessive amount of time spent directly providing services will likely be reflected in lower ratings on other items, including this one (e.g., decreased supervision time).

Rating for Supervision:

Base rating on how much and what type of supervision the team leader provides to the two staff to whom they consistently see for supervision. The team leader gets full credit for weekly supervision if they are either providing group and/or individual supervision to these two staff on a weekly basis.

- The team leader is expected to provide some type of supervision every week, regardless of format and coverage (e.g., group or individual).
- All team members should be receiving regular direct supervision.
- Please note that if the team has an Assistant Team Leader, supervisory responsibilities should not be completely delegated to the Assistant Team Leader and counted toward the credit for this item.

Clinical Supervision is defined as the provision of guidance, feedback, and training to team members to assure that quality services are provided to clients (e.g., following EBPs, negotiating ethical quandaries, managing transference and counter transference) and maintaining and facilitating the supervisee's competence and capability to best serve clients in an effective manner. Examples include the following:

- Meeting as a group (separately from the daily team meeting) or individually to discuss specific clinical cases;
- Field mentoring (e.g., helping staff by going out in the field with them to teach, role model skills, and providing feedback on skills);
- Reviewing and giving feedback on the specific tools (e.g., the quality of assessments, treatment plans, progress notes) to better capture and document clinical content;
- Didactic teaching and/or training;
- Formal in-office individual supervision (includes both impromptu meetings at least 20 minutes in length as well as scheduled); and
- A daily team meeting; however, if this is the only mechanism for supervision, rate at no higher than a "3" for this item and only credit for a daily team meeting if evaluators observe appreciable evidence of the team leader providing clinical supervision during the meeting.

Exclusion Criteria

Supervision needs are expected to vary across staff given experience and training; however, the fidelity evaluator should not count the following toward supervision:

- Brief, informal, unscheduled consultations (e.g., "Can I quickly touch base with you about a situation?" or "Hey, I need a minute of your time."). Although these are invaluable, they are difficult to reliably measure and we expect, at a minimum, this is occurring anyway. This item is focused on assessing more formal supervision offered by the team leader; whether scheduled or impromptu, it should be substantive.
- Estimations of weekly "drop-in" supervision.

Table 9. Categorization of Team Leader Services: Clinical Supervision and Direct Service Frequency

	Direct Clinical Services (see definition)	Clinical Supervision (see definition)
High level	At least 8 hours a week	Group and/or individual supervision <u>provided every week</u> to the two staff who consistently receive the most supervision.
Moderate level	4.0 - 7.9 hours per week	Group and/or individual supervision provided <u>every two to three weeks</u> to the two staff who consistently receive the most supervision.
Low level	0.5 - 3.9 hours per week	Group and/or individual supervision are provided, but less frequently than <u>every three weeks</u> to the two staff who consistently receive the most supervision.

	1	2	3	4	5
CT2. Team Leader as Practicing Clinician	Neither direct clinical services nor clinical supervision is provided at a frequency meeting low level standard.	A low level of frequency for both direct clinical services and clinical supervision OR one practice is not provided.	Both practices are provided at a moderate level of frequency OR one practice is provided at a high or moderate level, and one at a low level of frequency.	One practice is provided at a moderate level, and one practice is at a high level of frequency.	A high level of frequency for both direct clinical services and clinical supervision.

CT3. Psychiatric Care Provider on Team

Definition: The team has at least 0.80 FTE psychiatric care provider time to directly work with a 100-client team. Minimal qualifications include the following:

- (1) Licensed by state law to prescribe medications; and
- (2) Board certified or eligible (i.e., completed psychiatric residency) in psychiatry/mental health by a national certifying body recognized and approved by the state licensing entity. For physician extenders, must have received at least one year of supervised training (pre- or post-degree) in working with people with serious mental illness.

Rationale: Each team needs enough psychiatric care provider time to fulfill all required functions within the team (see CT4 and CT5). For 100-client teams, this requires a minimum of 32 hours per week. For 50-client teams, this requires a minimum of 16 hours per week.

DATA SOURCES (*denotes primary data sources)

Team Survey*

Review the team's response to item #1 to guide the questions below. Note whether the team has more than one psychiatric care provider, the FTE devoted by each, and the qualifications of each psychiatric care provider (i.e., do they have a psychiatrist, a physician extender, or both?).

Team Leader Interview*

I see based on your response to the Team Survey that you have ___ hours of psychiatric care provider time. Does the [psychiatric care provider] ever see clients who are NOT on the ACT team?

[If yes:] Is that included in this FTE estimate? What is the actual schedule of the psychiatric care provider?

[Determine if hours are relatively stable from week to week, or changes significantly week to week. If very long or weekend shifts are reported, explore how that time is being spent.]

If there is more than one psychiatric care provider on the team: ***Does each [psychiatric care provider] work with their own caseload or do they typically share responsibility for seeing the same clients?*** [Check on how assignments are made, which should also be reflected on column C of Excel spreadsheet.]

How do the psychiatric care providers know what is happening with each client psychiatrically since they share the role? What is their communication process (i.e., format, quality, frequency)?

If the psychiatric care provider is a nurse practitioner or physician assistant:
Approximately what percent of the (nurse practitioner's or physician assistant's) time is devoted to providing more traditional nursing services? [If applicable:] *Is that percentage included in the FTE estimate in the survey?*

Psychiatric Care Provider Interview

Can you describe a typical schedule working with this team in a given week?

[See if hours and schedule corroborate with the level of time commitment and integration to the team itself (e.g., they are scheduled for blocks of time with the team throughout the week} as well as what is reported in Team Survey.]

[Refer to Team Survey Item #1 reported qualifications and experience.] **I see here you have approximately (insert number of years) experience working with people with serious mental illness. In what settings have you worked prior to working on this team?**

[If psychiatrist] **Are you currently board certified in psychiatry?** [If no] **Where did you complete your psychiatric residency?**

[If a physician extender] **Can you describe the supervision and training you received in working with people with psychiatric diagnoses?**

ITEM RESPONSE CODING

Rating Guidelines

- Do not count if they are technically employed by the team but have been on extended leave for three months or more.
- For teams with more than one psychiatric care provider, each provider must have at least 0.20 FTE (i.e., at least 8 hours per week} of clinical time to be considered part of the team (e.g., do not count reports of significant distant administrative support time, such as 8 hours off-site reviewing assessments and plans}. If this standard is not met, do not count them toward the FTE calculation. Psychiatric residents do not yet meet qualifications and will not count toward the FTE in this item, but if they are at least 8 hours per week with the team, they may be counted as part of the team (e.g., in FTE for Program Size, and contacts for Intensity and Frequency of Services}.
- The expectation is that the psychiatric care provider has designated time with the team throughout the week, and those designated times include clinical work, interactions with the team, and other on-site administrative duties (it does not include days exclusively scheduled for "administration and paperwork," for example}.

- If the psychiatric care provider sees clients across agency programs throughout the day and week (e.g., appointments with ACT clients are commonly intermixed with appointments with other clients), attempt to adjust actual FTE to reflect time dedicated to ACT only.
- If the provider is a nurse practitioner: Allow for 20% of nurse practitioner FTE toward more traditional nursing responsibilities (e.g., intramuscular (IM) shots, medication management). If it is more than 20% and due to compensating for nursing practice rather than prioritizing integrated healthcare as a team, then deduct the FTE percentage accordingly. Similar criteria may be applied to Physician Assistants.
- Adequate communication standard when there are multiple providers: Teams with multiple providers (each at least 8 hours with the team) must demonstrate that there is adequate communication and collaboration between/among providers (i.e., there is a reliable process for sharing client information, consulting with one another about specific client needs and concerns, etc.) in order to aggregate the combined FTE. Sufficient communication between/among providers is particularly critical if sharing responsibility for treating the same caseload (rather than splitting the caseload). Poor communication between psychiatric care providers can also result in a resource drain on the team, who is then responsible for repeating information across providers. Teams who have multiple minimal part-time (8 - 12 hours/week) psychiatric providers are less likely to meet this adequate communication standard, and are also less likely to rate as well on CT4 and CT5 given more fragmented performance and less overall team integration.

Note: The denominator in this item is based on the number of clients currently served (not the number intended to serve when the team is at full capacity). If information across sources is inconsistent, the evaluator should ask for clarification during the team leader interview or make follow-up contact with the program. Similar to all scale items, the rating should be based on the most credible evidence available to the evaluator (e.g., even if the psychiatric care provider is reported as 0.80 FTE to a 100-person ACT team, if the clients and clinicians consistently report that they are unavailable for consultation, or the actual work time is questionably at the reported FTE level, an adjusted FTE and lower score may be appropriate).

Formula

$$\frac{\text{FTE value} \times 100}{\text{\# of clients currently served}} = \text{FTE per 100 clients}$$

Please refer to the TMACT Calculation Workbook to enter and compute these data.

Examples

West has 0.15 FTE of psychiatric care provider time for a 48-client program. South has 0.50 FTE for a 104-client program. Both meet qualifications.

WEST: $[(.15 * 100) / 48] = 0.31$ FTE psychiatric care provider → item coded as a "2"

SOUTH: $[(.50 * 100) / 104] = 0.48$ FTE psychiatric care provider → item coded as a "3"

	1	2	3	4	5
CT3. Psychiatric Care Provider on Team	Less than 0.20 FTE psychiatric care provider(s) per 100 clients.	0.20- 0.39 FTE psychiatric care provider meeting at least minimal qualifications per 100 clients OR criteria for a "3" rating met, except communication standard if two or more providers, OR at least 0.20FTE with inadequate qualifications cited.	0.40- 0.59 FTE psychiatric care provider meeting at least minimal qualifications per 100 clients with demonstrated communication and collaboration if two providers. OR criteria for a "4" rating met, except communication standard if two or more providers.	0.60- 0.79 FTE psychiatric care provider meeting at least minimal qualifications per 100 clients with demonstrated communication and collaboration if multiple providers. OR criteria for a "5" rating met, except communication standard if two or more providers.	At least 0.80 FTE psychiatric care provider meeting at least minimal qualifications per 100 clients. Two or more providers must demonstrate a mechanism for adequate communication & collaboration between/among providers.

CT4. Role of Psychiatric Care Provider in Treatment

Definition: In addition to providing psychopharmacologic treatment, the psychiatric care provider performs the following functions in treatment:

- (1) *Typically* provides at least monthly assessment and treatment of clients' symptoms and response to the medications, including side effects;
- (2) Provides brief therapy;
- (3) Provides diagnostic and medication education to clients, with medication decisions based in a shared decision-making paradigm;
- (4) Monitors clients' non-psychiatric medical conditions and non-psychiatric medications;
- (5) If clients are hospitalized, communicates directly with clients' inpatient psychiatric care provider to ensure continuity of care; and
- (6) Conducts home and community visits.

Rationale: The psychiatric care provider serves as medical director for the team, taking the lead in all psychiatric treatment and monitoring all other health conditions and medications.

DATA SOURCES (*denotes primary data source)

Excel spreadsheet (columns V and W)

Refer to team's practices around medications, especially the use of antipsychotic injections.

Chart Review (Log I)

Look at the extent to which the psychiatric care provider is delivering integrated healthcare and brief therapy. Of consideration, it is unlikely that brief contacts (e.g., 10 - 15 minutes) affords much time to provide integrated healthcare and brief therapy. Also examine frequency of visits.

Psychiatric Care Provider Interview*

We'd like to ask you some questions about your direct work with clients. Although no day may be truly typical, can you describe a typical day for you as it relates to the services you're providing to ACT clients?

[Prompt with questions below depending on how much information they provide with this initial question. Ask of each provider, if there are two or more.]

***How often do you typically see clients?
Who determines your schedule?***

Can you provide (additional) examples of brief therapy that you are providing?

[Seek specific examples and try to understand how often brief therapy is provided and what does it tend to look like, what therapeutic techniques are being used]

How do you talk with clients about the medications you are prescribing to them? Describe how they have a say in what you prescribe or how it is administered?

[Prompt for whether they provide any education and the extent to which they work from a shared decision-making approach. Also inquire as to how decisions around antipsychotic injections are made. Inquire as to whether anyone is currently refusing all medications, and how the psychiatric care provider is addressing this choice. Also ask if the psychiatric care provider is prescribing Clozaril to anyone, and to how many.]

Do you use a lab or monitoring service to assess medication adherence or substance use—where blood, urine, or saliva is sampled and sent to a laboratory? [If yes] *Describe how it is determined who such services are used with and implications for treatment.*

Can you tell us more about your role regarding clients' non-psychiatric medical conditions and non-psychiatric medications? [Prompt for the extent to which they actively monitor non-psychiatric medical conditions and medications, and if there are any circumstances where they more directly treat. Also prompt for more preventive measures taken around wellness management. Refer to specific clients in the Excel spreadsheet, asking more specifically how the psychiatric care provider is delivering care to those with specific health conditions indicated.]

If you haven't yet shared, can you provide a good example of your direct involvement in the assessment and/or treatment of a client's non-psychiatric condition?

Can you tell us (more) about your role when clients are hospitalized for psychiatric reasons? [Prompt for how actively psychiatric care providers are involved in coordinating care with inpatient staff—are they ever the first point of contact and when, do they ever visit a person in the hospital in person, and what is a recent example.]

Where do you typically see clients?
[Prompt for whether they typically see clients in the community on their own, or in the company of other team members—and reasons for this.]

About what percentage of your time is spent in the office vs. in the community?

Nurse Interview*

What is the psychiatric care provider's role in providing treatment? Describe the range of services they provide. [Prompt for each of the role areas described in the definition, specifically, prompt for their interpersonal style and use of shared decision-making, attention to broader health concerns, and communication with other providers.]

How would you describe their approach in discussing medications with clients, particularly if the client is not wanting to take certain medications?

In what ways does the psychiatric care provider work or communicate with inpatient psychiatric staff when clients are hospitalized? [Prompt for whether they are proactive, rather than relying more on nurses and other team members to coordinate care. If there are two or more providers, assess the role areas for each.]

Clinician Interview

What is your sense of the psychiatric care provider's role in providing treatment?

Aside from prescribing medications, what other services are they providing? [Query for both providers separately if there are two; specifically, prompt for their interpersonal style with clients and use of shared decision-making, attention to broader health concerns, and communication with other providers.]

How often do you see them getting out of the office to see clients? Are they willing to see clients independently, or do they prefer that another team member accompany them on visits? [If psychiatric care provider has someone accompany him or her into the field, try to understand the rationale for this.]

Client Interview

Do you meet with (name psychiatric care provider)? Please tell me how they help you. What do you like about working with them? [If there are more than one provider sharing responsibility in seeing everyone, inquire how well that is working for the client]

Is there anything you'd like to be different in how you work with (name) and the services you receive?

ITEM RESPONSE CODING

Rating Guidelines

If **two or more psychiatric care providers share this role at different FTEs**: Base this rating on the extent to which the psychiatric care provider with the highest FTE meets the six treatment functions.

If **two or more psychiatric care providers share this role at equal FTEs**, assess based on whether their caseload is split or shared:

If the caseload is **split**: Base this rating on the psychiatric care provider who fulfills the **fewest** number of functions within the team. For example, if one provider performs all six treatment functions, but the second provider only fulfills functions #1 through #3, then the highest rating they can achieve is a "2" based on the second provider's performance.

If the caseload is **shared**: Base this rating on a collective appraisal of providers' performances.

Please use Table 10 to assist with rating each function and making your overall rating.

Table 10. Role of Psychiatric Care Provider in Treatment

Functions	No Credit	Partial Credit	Full Credit
Function #1: Typically provides at least monthly assessment and treatment of clients' symptoms and response to the medications, including side effects. ⁵	Less than 40% of clients are seen by a psychiatric care provider approximately monthly (i.e., every 1 - 6 weeks) AND/OR Clients are seen less frequently than every three months <u>without a good rationale</u> .	About 40-64% of clients are seen by a psychiatric care provider approximately monthly (i.e., every one to six weeks); OR At least 65% seen approximately monthly, but several clients are seen less frequently than every three months <u>with good rationale</u> (e.g., less frequent follow-up is part of a transition plan; attempted contacts are documented).	At least 65% of clients are seen by a psychiatric care provider approximately monthly (i.e., every one to six weeks), AND No clients are seen less frequently than every three months (an exception or two with good rationale may be permissible). <u>Note</u> : Frequency of service provision should be titrated depending on client need and treatment plan specifications. Although it may not be feasible to provide such frequent assessment to institutionalized clients, the provider does make an effort to have face-to-face and collateral contact to assess status.
Function #2: Provides brief therapy.	Does not, or very rarely provides brief therapy. No examples were provided reflecting the use of empirically-supported	Some brief therapy appears to be provided, but limited in number of clients receiving and/or more limited presence across data sources (e.g., reports of such are provided, but see no evidence in chart review).	Brief therapy is provided and follows principles in alignment with known empirically-supported therapies (e.g., motivational interviewing (MI), CBT). Examples include the following: <ul style="list-style-type: none"> • Clarification of clients' beliefs and feelings about their symptoms, mental illness, medication, and issues of "chemical control" • Cognitive restructuring • Problem-solving • Role-playing

⁵ Use the Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate the percentage of clients seen at least every six weeks and no less frequently than every three months.

Table 10. Role of Psychiatric Care Provider in Treatment

Functions	No Credit	Partial Credit	Full Credit
	therapies within contacts, or examples were extremely limited in quality or quantity.		<ul style="list-style-type: none"> • Examining pros and cons • Relaxation training • Activity and pleasant event scheduling <p>Evidence of brief therapy should be present across multiple client contacts and data sources, such as interviews and chart reviews.</p>
Function #3: Provides diagnostic and medication education to clients, with medication decisions based in a shared decision-making paradigm.	Does not provide diagnostic or medication education to clients; shared decision-making model is not used.	Provides diagnostic and medication education to clients, but there is some report by clients or other team members that it is inconsistently provided, that it is provided using medical jargon, and/or there are notable instances where a shared decision-making model is not used.	<p>Psychiatric care provider provides information to the client about their psychiatric diagnosis and answers any questions or concerns that arise about that diagnosis and related symptoms/behaviors.</p> <p>Psychiatric care provider meets with each client to discuss the medications they are prescribing, where this discussion may include:</p> <ul style="list-style-type: none"> • Anticipated benefits; • Possible side effects; • Clients' past experiences, values, and preferences; • Administration details, and • Areas of needed collaboration in taking the medication. <p>A variety of medications and administration modes (orals vs. IM injections) corroborates report of a shared decision-making approach.</p> <p>The psychiatric provider uses non-judgmental and non-medical language that is understandable to the client and engages in shared decision-making whenever possible. Psychiatric care providers who typically have short, infrequent visits are often less likely or able to use a shared decision-making model.</p>
Function #4: Monitors clients' non-psychiatric medical conditions and non-psychiatric medications.	Although the provider may be aware of non-psychiatric medical conditions and medications, there is no monitoring.	Monitors non-psychiatric medical conditions and medications, but there is evidence of inconsistent work in this area (e.g., screening and monitoring, but not coordinating with primary care providers).	<p>The psychiatric care provider, in collaboration with nursing, oversees the overall medical care of clients on the team, including:</p> <ul style="list-style-type: none"> • Regular screening for medical conditions (e.g., ordering lab work, requesting that nurses conduct screening for metabolic syndrome for clients taking atypical antipsychotics); • Consistent monitoring of existing medical conditions (monitoring blood-glucose levels for those with diabetes); • Assessing wellness/health management skills and collaboratively working with the team on developing a wellness management plan or strategy (nicotine replacement therapy; nutrition); and • Checking in with clients and coordinating with primary care/medical doctors regarding medical conditions that require treatment outside the ACT team, as well as non-psychiatric medications.

Table 10. Role of Psychiatric Care Provider in Treatment

Functions	No Credit	Partial Credit	Full Credit
Function #5: If clients are hospitalized, communicates directly with clients' inpatient psychiatric care provider to ensure continuity of care.	Psychiatric care provider does not communicate with inpatient psychiatric care provider when clients are hospitalized.	There is some contact with inpatient providers when clients are hospitalized, but this does not occur on a regular basis, and/or provider relies heavily on nursing and other staff to communicate with inpatient staff.	When clients are hospitalized, the psychiatric care provider contacts the inpatient psychiatric provider and/or team to discuss the circumstances surrounding the client's hospitalization, medication and symptom history, most recent medications and response to those medications, and overall treatment planning to best support the client during inpatient hospitalization and promote a healthy return to the community. Recent examples (past six months) are provided where the psychiatric care provider has visited a client in the hospital.
Function #6: Conducts home and community visits.	Does not conduct home and community visits, or community contacts are dictated by efficiency rather than clinical need. E.g., provider goes into the community to a residential setting to see ACT clients who reside at that one residence, but does not see other ACT clients in the community.	Psychiatric care providers on new teams spend less than 50% of their time in the community, but do get out of the office for many contacts, per clients' clinical needs. Providers on more established teams spend less than 30% of their time in the community, but do get out of the office for many contacts, per clients' clinical needs; AND/OR psychiatric care providers rely heavily on other staff to accompany him or her out in the community when seeing clients.	The value of community-based contacts may be balanced with efficiency of time. Psychiatric care providers of established teams are expected to have at least 30% of the client contacts in the community, and all or nearly all clients have been met in the community at least one time. Psychiatric care providers of newer teams (operating less than year) are encouraged to spend more time in the community (at least 50%) as there is more work to engage clients, and help serve to model community-based work to the team. It is expected that psychiatric care providers conduct outreach independently, not requiring the company of other staff members beyond practices common for all (e.g., doubling up for safety concerns for a particular client; providing field supervision).

	1	2	3	4	5
CT4. Role of Psychiatric Care Provider in Treatment	The psychiatric care provider performs 2 or fewer functions total.	4 functions PARTIALLY performed (2 are absent) OR 3 functions are performed (3 are absent).	4 functions are performed (2 are absent), but up to 3 are only PARTIALLY performed OR 5 functions are performed (1 is absent) OR ALL 6 functions are performed, but more than 2 are PARTIALLY performed.	ALL 6 functions are performed, but up to 2 functions are only PARTIALLY performed.	ALL 6 treatment functions FULLY performed.

CT5. Role of Psychiatric Care Provider within Team

Definition: The psychiatric care provider performs the following functions within the team:

- (1) Collaborates with the team leader in sharing overall clinical responsibility for monitoring client treatment and team member service delivery;
- (2) Educates non-medical staff on psychiatric and non-psychiatric medications, their side effects, and health-related conditions;
- (3) Attends the majority of treatment planning meetings;
- (4) Attends daily team meetings in proportion to the minimum time expected for caseload size;
- (5) Actively collaborates with nurses; and
- (6) Provides psychiatric back-up to the program after-hours and weekends (**Note:** may be on a rotating basis as long as other psychiatric care providers who share on-call have access to clients' current status and medical records/current medications).

Rationale: In addition to being the medical director of the team, the psychiatric care provider is a fully integrated member of the team, actively collaborating and communicating with other team members and regularly attending all necessary meetings to guide treatment.

DATA SOURCES: (* denotes primary data sources)

Team Leader Interview*

Aside from the clinical services they provide, what is the psychiatric care provider's role within the team? For example, how much do they participate in daily team meetings or treatment planning meetings? [If there are two or more psychiatric care providers, prompt for specific roles identified above for each provider.]

Can you describe your professional relationship with the psychiatric care provider? How do your roles compliment and/or conflict with one another?
[Prompt for how they share team clinical leadership and oversight responsibilities. If there are two or more providers, prompt for specific roles for each.]

Psychiatric Care Provider Interview*

Now we'd like to ask you questions as relates to other ACT team staff. How do you see your role within the team—as a team member, separate from the services you provide? [Depending on their response, you may want to ask some of the specific questions listed below. Ask this of each provider if there are two or more.]

Can you describe your work and relationship with the team leader? Is it a collaborative relationship? Are there conflicts? [If more than one psychiatric care provider, further query for how psychiatric care providers work together with team leader.]

Can you give (additional) examples for how you provide information to other team members regarding medications or clients' health conditions?

How often do you attend any treatment planning meetings? [A treatment planning meeting is where staff come together with a client to review goals, progress, and develop/update the plan itself. This is different than a clinical treatment team meeting where team members, with or without client and other stakeholders, do some needed problem-solving.] **For which clients do you attend planning meetings, and how often are such meetings held?**

How often do you attend daily team meetings? How long do you stay?

In what ways do you work together with the nurses on the team? Do you have any set aside meeting time with the nurses?

[If yes] *What are those meetings focused on?*

Who provides psychiatric back-up to the team during weekends and after-hours?

[If there is more than one psychiatric care provider:] ***How do you ensure that clinical information is communicated between you and the other psychiatric care provider(s) on the team?***

Is there any part of your role that you find to be challenging to fulfill or carry out day-to-day? [Prompt for details]

Are there areas of education or training you think would be helpful for you to do an even better job delivering ACT services?

Clinician Interview

Who would you say provides clinical leadership to the team?

How do the team leader and psychiatric provider(s) work together in sharing their leadership responsibilities within the team? What are their respective roles? Are they complementary? Conflicting?

[Ask the following regarding all providers if there are two or more.]

How often does the psychiatric care provider attend your daily team meeting?

<p>How often do they attend treatment planning meetings, especially ones where the client is present and the focus is on plan development?</p> <p>Can you provide examples in how they talk with you about clients' medications and related medication needs? How often does this occur?</p> <p>Are they readily accessible? What is the typical approach to getting in touch with the psychiatric care provider when they are needed? Are they ever on-call for emergencies with clients?</p>	
---	--

ITEM RESPONSE CODING

Rating Guidelines

Use the team leader and psychiatric care provider interviews as primary data source. Use data from clinician interviews to back-up conclusions. If the psychiatric provider fulfills all six functions within the team, rate this item as a "5."

Treatment Planning Meeting Attendance: To receive credit, an ACT psychiatric care provider must be attending the planning meetings for at least 50% of the caseload if planning meetings are held at least every six months; and/or attend all client planning meetings if held annually. No credit if such planning meetings are not held at least annually.

If two or more psychiatric care providers share this role: Rate this item from the perspective of the team in terms of whether they have adequate access to each of these functions, thereby strengthening the team, given the commitment and role of the collective body of psychiatric care providers. If one provider is clearly stronger than another in a particular function, and this appears to have a negative consequence for the team (e.g., the former provider is at a lesser FTE), then do not give credit for that function. Note that credit for daily team meeting attendance should consider the expected minimal coverage given the size of the team. Two examples: (1) A team serving 100 clients should have access to at least 32 hours of psychiatry and attendance of psychiatric care provider staff at a minimum of four days per week. If a team this size, however, had a psychiatrist at 16 hours and attending two days a week, they would not meet this standard (of four daily team meetings given the size of the team). (2) A team with two psychiatric care providers at an aggregate 32 hours of psychiatry time (0.80 FTE) should have psychiatric care provider attendance for at least four daily team meetings per week, regardless if they share in this responsibility equally (e.g., both attends two meetings per week) or not (e.g., one attends once a week, and the other three times per week).

CT5. Role of Psychiatric Care Provider within Team	1	2	3	4	5
	The psychiatric care provider performs no more than 2 team functions total.	3 team functions are performed.	4 team functions are performed.	5 team functions are performed.	ALL 6 team functions are performed.

CT6. Nurses on Team

Definition: The team has at least 2.85 FTE registered nurses (RNs) assigned to work within a 100-client team. At least one full-time RN on the team has a minimum of one year of experience working with adults with severe mental illness.
NOTE: This item is rated based on 2.85 FTE (vs. 3.0 FTE) since there is more likelihood for the team to get penalized on this item if the census goes even slightly above the 100-client team.

Rationale: Nurses have been found to be a critical ingredient in successful ACT programs. According to research studies, the presence of a nurse on an ACT team is associated with improved client outcomes.

DATA SOURCES: (* denotes primary data source)

Team Survey*

Please refer to the item #1 response by noting FTEs and qualifications.

Nursing Interview*

Review and confirm hours with team, degree, and qualifications.

Approximately what percent of your workweek involves nursing-related activities as opposed to being called upon to engage in activities that clearly do not include a nursing function? (Use this estimate to gauge the extent to which they are functioning within the critical roles -- e.g., if they endorse activities representing all six critical roles, but then report that only 40% of their time is engaged in nursing activities, then follow-up questions and referencing other data sources is key to determining true nature of their role within team).

Are you assigned as the "primary" team member or care coordinator for any clients, or serve on ITTs? If so, how many and why do you think you were assigned to work with those particular clients (i.e., did they have more specialized health-related needs the nurses were best equipped to address)? [This additional information provides context for how the nurses may be employed within the team.]

ITEM RESPONSE CODING

Rating Guidelines

- Inquire about whether nurses have responsibilities outside of the ACT team and adjust FTE time accordingly.
- A nurse practitioner serving as the team psychiatric care provider does not count toward the nursing FTE total unless the break-out of time is clear and supported by multiple data sources.
- 1.0 FTE licensed professional nurse (LPN) or certified medical assistant (CMA) may count toward FTE total, but at 75% of the FTE time and only if team has at least 1.0 FTE RN also on team (0.5 LPN or CMA may count toward FTE total, but at 0.38 of the FTE time). For example, if a 100-client team has 2.0 FTE RNs and 1.0 FTE LPN, then the team is rated based on 2.75 FTE nursing time, which results in a rating of "4".
- Refer to OS1 staffing inclusion criteria. Do not count as part of the team if actual time dedicated to ACT is less than 16 hours per week and/or the nurse does not attend at least two daily team meetings per week. Do not count both FTE of permanent staff on leave and interim temp staff.

Note: The denominator in this item is based on the number of clients currently served. If inconsistent, then the assessor should reconcile information across sources and score accordingly.

Formula

Prorate FTE per 100 clients:

$$\frac{\text{total FTE value} \times 100}{\text{\# of clients currently served}} = \text{FTE per 100 clients}$$

of clients currently served = FTE per 100 clients

Please refer to the TMACT Calculation Workbook to enter and compute these data.

	1	2	3	4	5
CT6. Nurses on Team	Less than 0.50 FTE RNs per 100 clients.	0.50 - 1.40 FTE RNs per 100 clients.	1.41 - 2.10 FTE RNs per 100 clients OR Criteria for "4" or "5" rating met, however no full-time RNs have a minimum of 1 year experience working with adults with severe mental illness.	2.11 - 2.84 FTE RN per 100 clients.	At least 2.85 FTE Registered Nurses (RNs) per 100-client team; at least 1 full-time nurse must have at least 1 year experience working with adults with SMI. If not, rate no higher than a "3".

CT7. Role of Nurses

Definition: The team nurses perform the following critical roles (in collaboration with the psychiatric care provider):

- (1) Manage the medication system, administer and document medication treatment;
- (2) Screen and monitor clients for medical problems/side effects;
- (3) Communicate and coordinate services with the other medical providers;
- (4) Engage in health promotion, prevention, and education activities (i.e., assess for risky behaviors and attempt behavior change);
- (5) Educate other team members to help them monitor psychiatric symptoms and medication side effects; and
- (6) When clients are in agreement, develop strategies to maximize the taking of medications as prescribed (e.g., behavioral tailoring, development of individual cues and reminders).

Rationale: As described previously, nurses have been found to be a critical ingredient in successful ACT programs. The reason for this is that they play a key role in both direct service and staff education, broadly defined to include not only medication management, but also screening for health problems, health promotion and education, coordination of services with health providers, and cross-training to other ACT staff.

DATA SOURCES (* Denotes primary data source)

Excel spreadsheet (column N, V and W)

Refer to team report on health/lifestyle interventions provided (column N):

Refer to team's practices around oral medication management and monitoring (column V) and IM injections (column W):

Chart Review (Log I)

Review charts for the extent to which team is providing health/lifestyle interventions.

Team Leader Interview*

What role do the nurses play on the ACT team? [Prompt for roles above.]

Do the nurses ever have responsibilities (or serve clients) outside the ACT team?

Please describe how the nurses manage the medication system for ACT clients.

[Prompt for the quality of work, such as timely refills, accuracy in preparing medication packets for distribution, and accuracy in maintaining medication administration records (MAR) and updated lists of prescribed medications.]

Nurse Interview*

Describe your role on the ACT team.

What does your day-to-day work look like? [Follow-up with specific questions below, depending on whether they provide enough information regarding the six roles listed above. Use reflections and summaries to verify what you have so far heard in this opening question as it relates to below topics.]

Can you tell us more about your specific role within the team regarding medications? [Refer to column V on Excel spreadsheet-how many oral medications are directly managed by the ACT team and ACT nursing staff? Gather information on medication check-in, storage, and delivery to clients, including the rates at which clients have medications delivered by team.]

[For next several questions, refer to Full Credit column in Table 11 on pp. 61-63 to help determine the extent to which nurses are fulfilling these functions.]

Can you tell us more about what you do regarding clients' health conditions? How are lab work and basic health status indicators (e.g., blood pressure, weight, blood-glucose levels) monitored for non-psychiatric conditions? Are these health data tracked in any way? What kind of nursing assessments do you use [Prompt for abnormal involuntary movement scale (AIMS) assessment]? ***How often do you conduct them?***

In what ways do you help with communication between the team and non-ACT healthcare providers as it relates to client care? [Prompt for whether communication sheets are used, the reliability of this exchange, and how this information is maintained within the team. Ask for a copy of a health communication form.]

Do you accompany participants to healthcare appointments? How do you decide who accompanies them? [Seek examples]

Please tell us more about any work you do on prevention or health promotion with clients. Tell us about the health and lifestyle interventions you are using with clients. [Refer to column N on Excel spreadsheet and Full Credit column under Function #4.]

What is your role regarding training other team members on clients' medications and/or their health conditions? [Prompt for examples as needed-is this more informal 1:1 or in daily team meeting, is it with any prepared and shared educational materials?]

Please describe any specific strategies you use to help people take their medications as prescribed on their own
[If needed, prompt for examples of individuals who are not opposed to taking medications, but do not do so consistently due to confusion, memory, or cognitive or behavioral impairments.]

Is there any part of your role that you find to be challenging to fulfill or carry out day-to-day? [Prompt for details]

What are the areas of education or training you think would be helpful for you to do an even better job in your role?

Clinician Interview

Do the nurses on the team ever talk with you about how to monitor psychiatric symptoms, medication side effects, or other health-related issues? [Ask for specific examples, and gauge frequency with which this occurs]

ITEM RESPONSE CODING

Rating Guidelines

Use Table 11 to determine full and partial credit for each function to determine your overall rating. Use the nurse and team leader interviews as primary data sources; use chart reviews to back-up conclusions. If the nurses fulfill all six functions within the team, rate this item as a "5."

Table 11. Role of Nurses			
Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #1: Manage the medication system, administer and document medication treatment	Nurses do not or rarely manage the medication system, administer and document medication treatment. Greater than 66% of clients are independently managing medications on their own (e.g., picking up and storing monthly medications at their home} and/or receive these medications directly from residential staff.	Nurses are inconsistent in fulfillment of this particular role. Anywhere from 34% - 66% of clients are independently managing medications on their own (e.g., picking up and storing monthly medications at their home} and/or receive these medications directly from residential staff.	Nurses take the lead on filling prescription orders, storing and putting together medication deliveries and packets, managing IM injection schedules and administering injections, and ensuring that the MAR and all other documentation related to medications is accurate and up-to-date. One-third (33%) or less of the caseload should be independently managing medications on their own (e.g., picking up and storing monthly medications at their home} and/or receive these medications directly from residential staff. Although ACT helps individuals have more independence and responsibility with medications, there are many reasons why a priority clinical population for ACT benefits from medications routed through the team, including: being positioned to modify and tailor medication supports as needs change; assessing and detecting medication errors and changes; and being able to prescribe and monitor controlled substances.

Table 11. Role of Nurses

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
<p>Function #2: Screen and monitor clients for medical problems/side effects</p>	<p>Nurses do not or rarely screen and/or monitor clients for medical problems/side effects.</p>	<p>Nurses screen and monitor clients for medical problems and side effects, but there is indication that this is less consistently conducted or the quality is variable (e.g., not using available standardized assessments}.</p>	<p>Nurses conduct regular screening for medical conditions and side effects of medications and monitor existing or newly-identified medical conditions as clinically indicated and/or as physical health status changes, and at least annually. Examples of screening and monitoring for medication side effects include:</p> <ul style="list-style-type: none"> • Completion of the AIMS to assess and monitor tardive dyskinesia; • Measuring waist circumference and blood pressure, and completing/ordering lab work on triglycerides, HDL cholesterol, and fasting glucose to assess for metabolic syndrome secondary to certain second generation antipsychotic medications; <p>Examples of screening and ongoing monitoring for medical conditions include:</p> <ul style="list-style-type: none"> • Ensuring all immunizations and medical exams are up-to-date; • Assessing health/medical risk factors or conditions (e.g., assessing for obesity, diabetes, hypertension, high cholesterol) and associated wellness management skills; • Tracking all age-related and family history health screens (e.g., a colonoscopy at age 50, prostate exam for men at age 50 or earlier if African-American or a family history; a mammogram for women at age 40}.
<p>Function #3: Communicate and coordinate services with the other medical providers</p>	<p>Nurses do not or rarely communicate and coordinate services with the other medical providers.</p>	<p>Nurses contact inpatient and outpatient medical and psychiatric care providers who are treating ACT clients, but there is evidence that this is less consistently done or that this communication is often difficult (e.g., difficulty with inpatient providers calling them back or following-up on the ACT team's recommendations for medication changes}. Health communication forms may be used, but not reliably.</p>	<p>Nurses assume a lead role (ideally, in collaboration with psychiatric care provider, see CT4} in coordinating care with other medical providers, including primary care, specialists, and dentists. Evidence that all or most of these functions are fulfilled:</p> <ul style="list-style-type: none"> • Regularly contact inpatient and outpatient medical and psychiatric care providers who are treating ACT clients, which may occur when a client is hospitalized or when they have an outpatient medical appointment; • Accompany clients to appointments; • Use health communication forms to relay and receive information from non-ACT health providers.
<p>Function #4: Engage in health promotion, prevention, and education activities</p>	<p>Nurses do not or rarely engage in health promotion, prevention, and/or education activities.</p>	<p>Nurses provide some health promotion, prevention, and/or education activities, but do so inconsistently or their scope is limited.</p>	<p>Per interview and chart data, nurses consistently engage in health promotion, prevention and education activities, such as the following:</p> <ul style="list-style-type: none"> • Working on behavior change strategies related to identified health risk behaviors (e.g., education regarding the importance of safe sex practices, provision of condoms);

Table 11. Role of Nurses

Function	Examples/Guidelines				
	No Credit	Partial Credit	Full Credit		
			<ul style="list-style-type: none"> Intervening on health/medical risk factors or conditions (e.g., providing education and teaching self-management skills to clients with diabetes, obesity, hypertension, high cholesterol); Engaging in strategies to reduce tobacco use (e.g., providing education about and/or access to nicotine replacement therapy, facilitation of smoking cessation counseling or groups like Learning About Healthy Living [LAHL]). 		
Function #5: Educate other team members to help them monitor psychiatric symptoms and medication side effects	Nurses do not or rarely provide education to other team members to help them monitor psychiatric symptoms and medication side effects, but do so inconsistently.	Nurses provide some education to other team members to help them monitor psychiatric symptoms and medication side effects, but do so inconsistently and/or passively.	Nurses provide regular education to other team members, either formally (e.g., cross-training) or informally (in the daily team meeting) to help them monitor psychiatric symptoms and medication side effects. Education efforts are intentionally inserted into work rather than reflect passive responses to team questions.		
Function #6: When clients are in agreement, develop strategies to maximize the taking of medications as prescribed	Nurses do not or rarely develop strategies to maximize the taking of medications as prescribed.	Nurses play some role in assisting with improving medication adherence, but this role is limited in scope or inconsistently provided.	Nurses work with the psychiatric care provider and team to develop ways to improve medication adherence, such as the following: <ul style="list-style-type: none"> Behavioral tailoring (e.g., tying med box to toothbrush as a reminder to take medications, putting medications near coffee pot); Using cues and reminders (post-it notes, prompts from the team, setting up a cell phone or computer reminder), and pill organizers; and Simplifying or moving dosing, such as reducing to a one time a day medication, considering IM injection because it is preferred by the client. 		
CT7. Role of Nurses	1	2	3	4	5
	Nurses perform 2 or fewer functions total.	4 functions PARTIALLY performed (2 are absent) OR 3 functions are performed (3 are absent).	4 functions are performed (2 are absent), but up to 3 are only PARTIALLY performed OR 5 functions are performed (1 is absent) OR ALL 6 functions are performed, but more than 3 are PARTIALLY performed.	ALL 6 functions, with up to 3 functions are PARTIALLY performed.	ALL 6 functions are FULLY performed.

ST1. Co-Occurring Disorders (COD) Specialist on Team

Definition: The team has at least one 1.0 FTE team member designated as a co-occurring disorders (COD) specialist who has at least a bachelor's degree and meets local standards for certification as a co-occurring specialist. Preferably this specialist has training or experience in integrated treatment for COD.

Rationale: Co-occurring disorders are common in persons with severe mental illness. Appropriate assessment and intervention strategies delivered by competent staff are critical. As a result, it is essential to include a dedicated position to lead these strategies.

DATA SOURCES (* denotes primary data source)

Team Survey

Refer to item #1, noting FTE and qualifications.

Excel spreadsheet (column B)

How many clients are reported to be receiving integrated treatment for COD directly from the ACT team?

Chart Review

Cross-walk what specialists report as the percent of contacts that involve specialist services with what is observed in the review of progress note entries (e.g., what percent of progress note entries by COD specialist have some notation of integrated treatment for COD, inclusive of assessment and engagement?). Significant discrepancies may warrant an adjustment from what was reported and what was observed in the chart (e.g., specialist reports 90%, and chart review data finds only 50%; in such a case, given what other data sources indicate (e.g., scheduling practices), reducing to 70% may be a more accurate reflection of how the specialist is used in his or her role).

Co-Occurring Disorders Specialist Interview*

Please tell us about your training and experience in delivering integrated treatment for co-occurring disorders (COD).

If you were to think of a typical week, approximately what percent of client contacts involve some type of integrated treatment for co-occurring disorders service, which include outreach and engagement?

Are you assigned as the primary care provider or coordinator for any clients? If so, how many and, of those, who have a co-occurring substance use disorder? If your team uses ITTs, how many client's ITTs are you a part of? [This additional information provides context for how the specialist(s) may be employed within the team.]

ITEM RESPONSE CODING

Inclusion Criteria

If two specialists are on the team: It is acceptable and encouraged to consider the cumulative percent of time devoted to specialty services for up to two individuals serving in this specialty role. Please see the note in the rating guidelines section regarding inclusion of team members who may not be formally designated as a specialist, but have assumed more specialty service responsibilities.

Exclusion Criteria

Refer to OS1 for general inclusion and exclusion criteria (e.g., at least 16 hours of week with team, attending at least two daily team meetings per week).

Rating Guidelines and Formula

Several criteria are considered when determining the rating for ST1. These criteria include the following:

1. Reported time in position (i.e., full-time equivalency (FTE));
2. Actual time devoted to specialty-related activities¹ while in the position; and
3. Qualifications of the specialist(s).

NOTE: Up to two team members may be considered in this rating. Even if the team formally has one team member designated as the COD specialist, evaluators are encouraged to prompt the team leader prior to the fidelity review to determine whether there is any other team member who assumes responsibility for delivering integrated treatment for COD (please see the fidelity review orientation letter in Appendix A). Even if this secondary "COD specialist" does not meet minimal qualifications, they may positively contribute to this rating, which is in the spirit of the team sharing responsibility for services. However, be sure to simultaneously deduct from other staff FTE item, as relevant (e.g., a full-time peer specialist cannot be both credited for serving in peer specialist role full-time (at least 80% of time representing peer functions) and also be credited for 50% time toward COD specialist role).

**To rate ST1, input data obtained from pre-fidelity survey and interviews into Table 12.
Then use these data to complete Steps 1 – 3 below.**

Table 12. Summary of Data Used to Rate COD Specialist on Team.		COD Specialist	
		Primary Specialist	Secondary Specialist (if applicable)
Criteria			
A	FTE with ACT team (see pre-fidelity survey and interview data; (FTE = # of hours employed with ACT per week / 40}}		
B	Time devoted to specialty-related activities ¹ : estimated % of client contacts that involve integrated treatment for COD service (based on interview responses, cross-checked with other data sources ²).		
C	Meets minimal qualifications, which entails meeting local standards for certification or licensure as a COD specialist and has at least a bachelor's degree. (see under Step #3 below}		

Step 1. Determine Provisional Rating Given the Adjusted FTE (criteria A and B in Table 12)

***Please refer to the TMACT Calculation Workbook to enter and compute these data.

- a. If **80% or more of client contacts involve specialist-related activities** (criterion B), per specialist report and other sources², **give full credit for the reported FTE on the team** (criterion A). Refer to Table 13 to determine provisional rating (Note: it remains "provisional" because we have yet to examine impact of qualifications).

Example a: Specialist is 1.00 FTE (i.e., 40 hours/week) and reports that 90% of contacts involve COD specialty and other sources support that estimate, then 1.00 FTE (i.e., actual FTE) is used, which provisionally rates a "5" based on Table 13.

- b. If **less than 80% of client contacts involve specialist-related activities** (criterion B), per specialist reports and/or other sources², **calculate an adjusted FTE**, which is then used to determine the provisional rating based on Table 13.

FTE	Rating
1.00 +	5
0.75 - 0.99	4
0.50 - 0.74	3
0.25 - 0.49	2
0.00 - 0.24	1

Calculating the Adjusted FTE =

- If **specialist is full-time with the team** (i.e., 1.0 for criterion A in Table 12): Add 10 to the estimated percent of time dedicated to specialist role (criterion B in Table 12), and divide by 100.

Full-Time

Example b1: A full-time COD specialist reported, and other data sources corroborated, that 50% of her time was spent providing specialty services. Her adjusted FTE would be $50 + 10 = 60 / 100 = 0.60$ Adjusted FTE, which provisionally rates a "3" based on Table 13. (Note: it remains "provisional" because we have yet to examine impact of qualifications)

- If **specialist is part-time with the team** (i.e., less than 1.0 FTE reported for criterion A in Table 12), use the following formula to calculate the adjusted FTE:

$((\text{FTE on team, which is criterion A in Table 12}) * (\text{percent of client contacts involving specialty-related activities}^1, \text{ which is criterion B in Table 12})) + .05.$

Part-Time

Example b2: A COD specialist was employed with the team for 24 hours a week, or 0.60 FTE. She estimated that 50% of her time was spent providing specialty services. **(0.60** (which is FTE on team, or criterion A) **0.50** (representing 50%, or criterion B) **+ 0.05 = 0.35 Adjusted FTE**, which provisionally rates a "2" based on Table 13.

Step 2. Complete if there are two specialists; otherwise skip to Step 3

Aggregating FTE for Two Specialists: If there are two specialists in position, go through Step 1 above for each specialist and add together total adjusted FTE and determine provisional rating based on Table 13.

Example c: A team has a designated COD specialist who is full-time (1.0 FTE) with the team. He reported that at least 75% of his client contacts involve integrated treatment for co-occurring disorder services; the evaluators could not find data that supported such a high estimate (e.g., only 35% of his chart note entries reflected any specialty services) and agreed that 60% was more accurate.

A second team member was interviewed, as this person has a master's degree and has co-led integrated treatment for co-occurring disorder groups, as well as delivered some individual COD counseling. She works with the team four days a week at 0.80 FTE. She estimated that, of all the clients she meets with in a typical week, approximately 35% involve integrated treatment for COD intervention. The evaluators found other evidence to support that estimate.

COD specialist 1 (full-time): (60 (reflecting the 60% estimated time in role) + 10 (formula instructions to add "10")) / 100 = 0.70 Adjusted FTE.

COD specialist 2 (part-time): (0.80 (reflecting her FTE on the team) * 0.35 (reflecting 35% time in specialty role)) + 0.05 = 0.33 Adjusted FTE

Aggregate Adjusted FTE = 0.70 + 0.33 = 1.03 Total Adjusted FTE (Provisional "5" rating based on Table 13 - recall, it remains "provisional" as we have yet to determine impact of qualifications standard)

Step 3. Qualifications Determination for Final Rating (Criteria C in Table 12).

a. One specialist on team (see Step 1 examples above):

- **Provisional rating becomes final rating if the following qualifications are met:** Meets local standards for certification or licensure as a COD specialist and has at least a bachelor's degree.
- **Provisional rating is *adjusted down* to next lowest rating if above minimal qualifications are not met** (i.e., if the specialist in example a did not meet minimal qualifications, her provisional rating of a "5" becomes a "4;" if specialist in example b1 above did not meet minimal qualifications, her provisional "3" rating is reduced to a "2" rating.}.

b. Two specialists on team (see Step 2 examples above):

- **Two unqualified staff:** Provisional rating is adjusted down to next lowest rating if *both* specialists do not meet above minimal qualifications.
- **One qualified and one unqualified staff:** If one specialist meets qualifications, but the other does not, the final rating is the higher of the following two options: a) final rating is based solely on the one qualified staff or, b) final rating based on two unqualified staff (i.e., in example c described above, assume that Specialist 1 (adjusted FTE of 0.70) met qualifications, but Specialist 2 (adjusted FTE of 0.33 FTE) did not. Their aggregate FTE is 1.03 FTE (provisional "5" rating), and would be reduced to a "4" as one specialist does not meet qualifications (option b). Alternatively, we could rate based only on the one qualified staff, Specialist 1 (option a). However, her adjusted FTE of 0.70 only earns a "3" rating on its own. Thus, in this example, the option b should be used as the aggregate FTE of 1.03 that provisionally rates a "5," but then reduced one rating to a "4" results in the higher rating of the two options.

¹**Specialist-related activities:** Estimated percent of client contacts that involve any activity associated with the specialty area. Qualifying client contacts include those where engagement practices are delivered while providing other case management services, as well as more obvious specialty-related interventions or assessments. To get full credit (i.e., to be rated according to actual FTE with the team), *at least 80%* of client contacts should involve a specialty-related activity.

²**Supporting specialists' estimations:** Evaluators are encouraged to consider other data sources to gauge the approximate amount of time spent in specialist activities. Evaluators should first consider the specialist's estimation, then cross-check that estimation with other data sources, such as activities reported in the daily team meeting, noted in the client log, and progress notes. If a significant discrepancy occurs, evaluators should adjust this percentage, discussing with specialist if possible to agree on a more accurate percentage of time devoted to specialist activities. Otherwise, evaluators should adjust reported percentage, keeping in mind the following heuristic guidelines:

- For a specialist who provides a *high degree* of integrated treatment for COD services (e.g., 80% or more), it is assumed that such a high level of practice will be evident across multiple data sources—e.g., chart review (majority of notes (at least 60%) written by this specialist indicates some integrated treatment for COD services,

inclusive of engagement and MI}, observation of daily team meeting (i.e., reported contacts involving integrated treatment for COD services, and scheduled contacts to address integrated treatment for COD needs}, and a relatively large breadth of integrated treatment for COD being provided.

- For a specialist who provides a *moderate degree* of integrated treatment for COD services (e.g., 40% - 60%), it is assumed that a moderate level of practice will be evident across several data sources—e.g., chart review (some notes (e.g., 20% - 60%) written by this specialist indicates integrated treatment for COD service, inclusive of engagement and MI}, observation of daily team meeting (i.e., reported contacts involving integrated treatment for COD services, and scheduled contacts to address integrated treatment for COD needs}, the breadth of integrated treatment for COD being provided may vary.
- For a specialist who provides a *low degree* of integrated treatment for COD services (e.g., 10% - 30%), it is assumed that there will be little evidence of such practice when reviewing multiple data sources—e.g., chart review (very few notes (< 20%) written by this specialist indicates some integrated treatment for COD service}, observation of daily team meeting (i.e., very minimal mention of integrated treatment for COD contacts, if at all}, and integrated treatment for COD services themselves may be lacking or very limited (e.g., group work only, or focused only on COD counseling for those in more active treatment stage—no work with those in earlier stages of change readiness}.

	1	2	3	4	5
ST1. Co-Occurring Disorders (COD) Specialist on Team	Less than 0.25 (actual or adjusted) FTE COD specialist with at least minimal qualifications OR criteria for a "2" rating met, except qualifications standards.	0.25 - 0.49 (actual or adjusted) FTE COD specialist with at least minimal qualifications OR criteria for a "3" rating met, except qualifications standards.	0.50 - 0.74 (actual or adjusted) FTE COD specialist with at least minimal qualifications OR criteria for a "4" rating met, except qualifications standards.	0.75 - 0.99 (actual or adjusted) FTE COD specialist with at least minimal qualifications OR criteria for a "5" rating met, except qualifications standards.	At least 1.0 (actual or adjusted) FTE COD specialist with at least minimal qualifications.

NOTE: If there is no COD specialist on the team, rate this item as a "1," but do not rate ST2 and ST3 if COD specialist vacancy has been less than 6 months. Also, rate COD specialists hired within past two months on this item, which will likely be a low rating as they likely are not yet operating fully within their specialty role, but do not rate on ST2 and ST3. If hired more than two months before review, rate new specialist on ST2 and ST3.

ST2. Role of Co-Occurring Disorders (COD) Specialist in Treatment

Definition: The co-occurring disorders (COD) specialist provides integrated treatment for COD to ACT clients who have a substance use problem. Core services include the following:

- (1) Conducting ongoing comprehensive substance use assessments that consider the relationship between substance use and mental health;
- (2) Assessing and tracking clients' stages of change readiness and stages of treatment;
- (3) Using outreach and motivational interviewing (MI) techniques;
- (4) Using cognitive behavioral approaches and relapse prevention; and
- (5) Applying treatment approaches consistent with clients' stage of change readiness.

Rationale: Individuals with concurrent severe mental illness and substance use problems will most benefit from non-confrontational stage-wise treatment that focuses on the interplay of substance use and mental illness. Yet, it is also important to address the needs of clients who are in later stages of change readiness and treat them appropriately with the recommended techniques.

DATA SOURCES (* Denotes primary data source)

Team Survey

Examine the schedule of all groups provided by the ACT team and determine which ones are targeting individuals with substance use problems (i.e., groups targeting those in earlier stages of change readiness may be more inconspicuous, such as wellness groups).

Excel spreadsheet (columns A and B)

Examine how many clients with a COD are in early vs. late stages of change readiness. How many clients are reported to be receiving individual vs. group integrated treatment for COD directly from the ACT team? Use this information to guide interview questions below.

Team Leader Interview

How are clients who need integrated treatment for COD identified? [If the team reported that less than 40% of the caseload have a co-occurring disorder, inquire for reasons for this.]

What services are offered, and can you describe the role of the COD specialist in providing such services to clients with COD? [Listen for services offered through the team, and those the team is referring individuals to receive outside of the team.]

Co-Occurring Disorders Specialist Interview*

How do you come to identify who has a co-occurring substance use disorder? Can you describe the initial and ongoing assessment process? What type of assessment do you use (and should we see these in the charts)? [Ask follow-up questions, as appropriate, to determine how assessment data is being used to guide treatment strategies. Cross-reference with review of screening and assessment forms as noted in chart review above, as well as copies received from the team.]

Please describe your treatment philosophy in working with those with both severe mental illness and substance use disorders, as well as the range of services you provide.

[Depending on their response, you may want to follow-up with the following questions. If you receive more global or generic responses (e.g., "meet them where they are at"), inquire further to determine level of understanding and practice. Use client-specific information gleaned from chart reviews and/or discussion in the daily team meeting to ask follow-up questions about where selected clients are regarding stages of change readiness and examples of recent interventions. Assess for whether they are using stage appropriate interventions. Are they using outreach, MI, and harm reduction for clients in earlier stages? How is MI being used when working with clients in later stages? Are they using cognitive behavioral approaches and relapse prevention with clients in later stages?]

What do you think is the goal for clients as it relates to their substance use?

[Prompt for whether they focus on abstinence or harm reduction. If they use harm reduction, ask for specific examples.]

Let's say you're working with a client who doesn't acknowledge that they have a substance use problem. What would be your typical approach to working with him? [Prompt to hear about specific examples of clients with whom the specialist is currently working.]

Can you identify a client who is continuing to use, but has some awareness that her use is creating problems? Describe for me ways in which you are interacting and working with this client.

In what ways do you use confrontation with clients regarding their use?

Are drug/alcohol urine/blood screens ever used? If so, with whom and for what purpose?

Let's say you are working with someone who says 'yes, I want to change' and voices commitment to quit or reduce his use. What interventions and/or services would you offer? [Prompt to hear about specific examples of clients with whom the specialist is currently working.]

What about your approach to working with a client who has stopped actively using and is trying to be sober/abstinent. What types of services or interventions are offered? [Prompt to hear about specific examples of clients with whom the specialist is currently working; if not offered, ask about relapse prevention planning.]

Are there circumstances where you would not provide a particular service given active substance use? [If examples are needed, offer: such as assisting to the grocery store, helping fill out a job application; permitting group attendance.]

[If yet not clear if the specialist understands and practices stage-wise treatment, ask the following:] **Are you familiar with stages of change readiness and treatment?** [If yes] *How is this information collected and used? Reference Excel spreadsheet and prompt for examples of how they work with participants in different stages of change readiness.*

[If the team offers groups, ask]: **What is the focus of this group and who is invited to attend?** [Is the group tailored to those in earlier or later stages of change? Prompt for to what extent mental illness is addressed in this group — is there effort to truly integrate mental health and COD within the group?]

What resources (e.g., manuals, workbooks, SAMHSA IDDT Toolkit) do you use in individual and group treatment?

Do you ever assist clients to self-help meetings? Please tell me more about that.

If we have not yet heard of it yet, can you share with us an example of your practice that you think best reflects your work as the team's COD specialist? [With this example, try to clarify how far back the example dates.]

ITEM RESPONSE CODING

Rating Guidelines

Please see Table 14 for a brief overview of appropriate services given the client's stage of change.

The COD specialist is the primary data source. Rely on chart review to corroborate the description of services provided by the COD specialist and the quality and timeliness of assessments. Use documented clients' stages of change readiness to approximate whether services are stage-wise and appropriate.

Please refer to Table 15 to determine if criteria are met at all, partially, or fully. To achieve a rating of "5" on this item, the COD specialist systematically screens ACT clients for substance use and conducts ongoing comprehensive assessments at least annually and assesses and ideally track client's stage of change readiness for each substance of choice every three to 6 months. Assessment forms are conducive to this task and are maintained in the client's chart. There is clear evidence that a broad range of stage-wise services are provided (in individual and/or group services), and are appropriate given the client's stage of change readiness.

Note: Penetration (i.e., percent of clients receiving the services) is not considered when rating this item as this item is focused on the quality and range of services provided; however, lower rates of penetration may suggest less consistent practice, resulting in less than "full credit" designations.

"N/A" Criteria: If no person is hired into the COD specialist position at the time of the review and the position has been open for less than six months (thereby receiving a "1" rating on ST1}, or a recently hired staff person has been in the position for less than two months, then do not rate this item and exclude from ST subscale and Total Score calculations. If a person is hired into position, but still scores a "1" due to not meeting specified criteria, then assess and rate this role item.

Table 14. Examples of Stage-Wise Integrated Treatment for Co-Occurring Disorder Interventions

	Early Stages of Change Readiness and Treatment		Later Stages of Change Readiness and Treatment	
	Pre-Contemplation	Contemplation and Preparation	Action	Maintenance
Stage of Change Readiness	The client does not recognize that they have a problem with substance use or has no interest in modifying use at this time.	The client recognizes that substance use is causing some problems and is considering a change. In the contemplation stage, the client is more aware about the pros & cons, but ambivalent about change; whereas in the preparation stage, the client is planning for change.	The client is committed to reducing or discontinuing substance use. Behaviors are being modified to support change.	The client has abstained from substance use for at least 6 months.
Stage of Treatment	Engagement	Motivation	Active Treatment	Relapse Prevention
	<p>Focus of treatment: Outreach, assessment, engagement, and building a working alliance. Services are provided regardless of ongoing use, and include harm reduction strategies.</p>	<p>Focus of treatment: Education about substances, mental illness, and their interactions, and ongoing use of harm reduction strategies. There is a focus on identifying pros & cons of use. MI techniques are essential and include the following:</p> <ul style="list-style-type: none"> • Express empathy • Offer reflective listening • Assist with goal-setting • Develop discrepancy between goals and substance use • Conduct decision balance (pros & cons) • Roll with ambivalence to change • Emphasize personal choice 	<p>Focus of treatment: Helping to make change & sustaining it, with continued attention to harm reduction. Specific techniques include the following:</p> <ul style="list-style-type: none"> • MI • CBT, to include: <ul style="list-style-type: none"> • Managing social environments • Identifying & managing triggers and cravings • Relaxation/coping skills • \$ management to avoid using • Problem-solving to reduce stress • Relapse-prevention planning 	<p>Focus of treatment: Maintaining abstinence. Specific techniques include the following:</p> <ul style="list-style-type: none"> • Develop a relapse prevention plan • Help client attend self-help groups • Help build and maintain social supports for sobriety • Maintain awareness of vulnerability to relapse • MI • Help expand recovery to other areas of life (parent group, vocational supports)

Table 15. Role of Co-Occurring Disorders Specialist in Treatment

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Service #1: Conducting comprehensive substance use assessments that consider the relationship between substance use and mental health. ⁶	No COD assessments are conducted, are only completed minimally at intake, or are not completed by the COD Specialist.	Assessments are conducted for all clients, but are minimally focused on the interplay of mental health and substance use, and/or lack useful information. Assessments are inconsistently conducted across clients/time, which includes not consistently by the COD specialist. Partial credit is warranted if assessments are comprehensive (e.g., include a functional analysis and payoff matrix}, but are only completed at intake (i.e., no follow-up assessments are completed).	COD Specialist completes COD assessments, which are documented in client charts, and these assessments gather information pertinent to the interplay of substance use and mental health (e.g., negative and positive effects of substance use activity on mental health symptoms; timeline of critical life events and stressors with substance use activity}. All clients should have received a brief COD assessment at intake (when new to the team, many clients are not willing to discuss their use}, while those identified as likely having COD are routinely followed up with additional comprehensive substance use assessments, ideally at least annually.
Service #2: Assessing clients' stages of change readiness and stages of treatment. ⁶	There is a lack of understanding and/or documentation of stages of change readiness and treatment.	There is some understanding of the stages of change readiness and treatment, but stages are not accurately assessed and/or systematically documented. This may include documentation of stage of change or stage of treatment in other locations besides the client's medical record.	The clients' stages of change readiness and related stage of treatment are routinely and accurately assessed and documented. Ideally, this information is used to closely track progress and set-backs to identify coinciding events, mood states, etc.
Service #3: Using outreach and MI techniques.	Very little outreach is conducted and specialist does not employ MI techniques.	The specialist has a cursory understanding of MI, loosely applying techniques. Outreach may be more limited, with most of the efforts going toward those in more advanced stages of change readiness.	There is clear evidence that outreach strategies are employed to engage active users who are in earlier stages of change readiness. The specialist is adept at using MI techniques to work with clients who may be contemplating change, or needing assistance in sustaining focus on change.
Service #4: Using CBT approaches and relapse prevention.	There is limited understanding and application of CBT approaches and relapse prevention. There is very little COD counseling offered to those in later stages of change readiness.	There appears to be some understanding and application of CBT and relapse prevention, but it is more limited -clearly more individuals would benefit from advanced COD counseling.	There is clear evidence that the specialist understands and employs cognitive behavioral principles when providing COD counseling and teaching relapse prevention. Examples include attention to triggers for use, emotional reactions to triggers, learning effective coping skills, especially for how to wait out cravings.

⁶ Use Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate the percentage of clients in chart review sample for whom stage of change readiness or stage of treatment is document.

Table 15. Role of Co-Occurring Disorders Specialist in Treatment

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Service #5: Applying treatment approaches consistent with clients' stage of change readiness.	In review of all data sources, many examples were noted where there is an inconsistency between stage of change readiness and treatment approach (e.g., treatment was lacking all together, and or inconsistent with the stage of change readiness for many individuals}.	Mixed evidence: most clients are receiving a treatment approach consistent with stage of change readiness, but a few clear exceptions were observed where treatment was not appropriate given the stage of change readiness (e.g., treatment was lacking all together, and or inconsistent with the stage of change readiness for some individuals}.	Data sources indicate consistency between clients' stage of change readiness and treatment. To receive full credit, the following was observed: <ul style="list-style-type: none"> • No examples were noted where a client in an earlier stage of change readiness was being presented with a more advanced treatment approach, such as pushing them to attend a COD counseling class or attend AA meetings (exceptions may be when specialist intervenes more assertively due to significant safety risks); • Clients in an early stage of change readiness were receiving harm reduction interventions, and, where appropriate, MI; Later stages of change readiness clients (e.g., have voiced desire to quit and are working on it} are receiving active COD counseling and relapse prevention.

	1	2	3	4	5
ST2. Role of Co-Occurring Disorders Specialist in Treatment (COD)	The COD specialist provides 1 or fewer integrated treatment for co-occurring disorder services.	2 integrated treatment for COD services are provided (3 are absent}.	3-4 integrated treatment for COD services are provided, (1 or 2 are absent} OR ALL 5 services are provided, with 3 or more services PARTIALLY provided.	ALL 5 integrated treatment for COD services are provided, but up to 2 services are only PARTIALLY provided.	ALL 5 integrated treatment for COD services are FULLY provided.

ST3. Role of Co-Occurring Disorders Specialist within Team

Definition: The co-occurring disorders (COD) specialist is a key team member in the service planning for clients with COD. The COD specialist performs the following functions WITHIN THE TEAM:

- (1) Modeling skills and consultation;
- (2) Cross-training to other staff on the team to help them develop co-occurring disorder assessment and treatment skills;
- (3) Attending all daily team meetings; and
- (4) Attending the majority of treatment planning meetings for clients with COD.

Rationale: The COD specialist appropriately influences fellow team members' practices with co-occurring disordered clients so that clients receive optimal integrated treatment for COD across the team.

DATA SOURCES (* Denotes primary data source)

Daily Team Meeting

Observe whether and how the COD specialist contributes to discussions related to COD during the daily team meeting. Do they appear to be referred to within the team?

Co-Occurring Disorders Specialist Interview*

How often do you attend the daily team meetings? What do you see as your role in that meeting?

How often do you attend treatment planning meetings? How do you select the ones you attend? What do you see as your role in that meeting? [Prompt for examples]

Have you provided more formal trainings to the team related to your area of specialty? When, how often, what was the topic?

Do you ever provide more individual consultation with team members?
[If yes:] *How often? Can you give me an example?*

Is there any part of your role that you find to be challenging to fulfill or carry out day-to-day?

Are there areas of education or training you think would be helpful for you to do an even better job in your role?

Clinician Interview	
<p><i>Now we want to better understand how fellow team members may impact your practice.</i></p> <p><i>How has your work with clients with co-occurring substance use disorders been influenced by the COD specialist? Do they help you in your work with clients with COD? In what ways do you see them as a resource to you?</i></p>	
ITEM RESPONSE CODING	
General Frequency Guidelines	
<ul style="list-style-type: none"> • Modeling and Consultation: Modeling includes demonstration of behaviors and attitudes consistent with the integrated treatment for COD in meetings or in the field. To receive credit, they are not expected to be full-fledged experts in integrated treatment for COD, but are gaining expertise and are viewed as more expert in integrated treatment for COD than other team members. Consultation includes informal and ad hoc assistance with specific clinical cases (i.e., case-based consultation) and/or education specific to the specialist's content area provided frequently, such as at least monthly within the past 6 months. • Cross-training: Includes formal training (e.g., didactic, skill-based teaching) to other team members at least 20 minutes in duration provided at least one time in the past 6 months. To receive credit, the topic area should be judged to be relevant and helpful given the evidence-based practice guidelines. • Daily Team Meetings: Regularly attends all daily team meetings (except when pre-planned activities conflict with meeting) at a rate commensurate with their hours and schedule with the team. If the team meets four days a week, which is the rate at which the specialist attends, credit for this function. However, if the team is meeting less often than three days a week, then do not credit for this function. Similarly, credit if the specialist works 4x10-hour shifts each week and attends four days per week. • Treatment Planning Meetings: Attends the majority of treatment planning meetings for clients with COD. To receive credit, the specialist(s) attends planning meetings for at least 50% of those with COD, where such meetings are held every 6 months. If held less often than 6 months, no credit for this function is to be given. 	
Rating Guidelines	
<p>Use the interview with the COD specialist as primary data source. Cross-reference with the interview with the clinician. Reconcile any discrepancies with follow-up interview questions with the team leader. To receive full credit, the COD specialist provides all of four these services within the team.</p> <p><u>"N/A" Criteria:</u> If no person is hired into the COD specialist position at the time of the review (thereby receiving a "1" rating on ST1}, or a recently hired staff person has been in the position for less than two months, then do not rate this item and exclude from ST subscale and Total Score calculations. If a person is hired into position, but still scores a "1" due to not meeting specified criteria, then assess and rate this role item.</p>	

ST3. Role of Co-Occurring Disorders (COD) Specialist within Team	1	2	3	4	5
	The COD specialist does not perform any of the 4 functions within the team.	1 function is performed within the team.	2 functions are performed within the team.	3 functions are performed within the team.	ALL 4 functions are performed within the team.

ST4. Employment Specialist on Team

Definition: The team has at least 1.0 FTE team member designated as an employment specialist, with at least one year of experience providing employment services (e.g., job development, job coaching, supported employment). Ideally, the ACT employment specialist is a part of a larger supported employment & education (SEE) program within the agency.

Rationale: ACT teams emphasize skill development and support in natural settings. Fully integrated ACT teams include employment and educational services that enable clients to find and keep jobs in integrated work settings. As a result, it is essential to include a dedicated position to lead these strategies.

DATA SOURCES (* Denotes primary data source)

Team Survey

Refer to response to item #1, noting FTE and qualifications.

Excel spreadsheet (column E)

How many clients are reported to be receiving employment and educational services directly from the ACT team?

Chart Review

Cross-walk what specialists report as the percent of contacts that involve specialist services with what is observed in the review of progress note entries (e.g., what percent of progress note entries by employment specialist have some notation of employment and education services, inclusive of assessment and engagement?). Significant discrepancies may warrant an adjustment from what was reported and what was observed in the chart (e.g., specialist reports 90%, and chart review data finds only 50%; in such a case, given what other data sources indicate (e.g., scheduling practices), reducing to 70% may be a more accurate reflection of how the specialist is used in his or her role).

Employment Specialist Interview*

Please tell us about your training and experience in delivering employment and educational services.

Are you connected to a larger employment program within your agency? [If yes, inquire as to how the agency supported employment and education (SEE) program and ACT team are situated within the agency, and the employment specialist's role with both programs. This additional information provides helpful context for the evaluation of the vocational program. Ideally, the employment specialist is a part of a larger SEE program, but is fully integrated on to the ACT team.]

Do you provide services to non-ACT clients? [If yes:] *Approximately how much of your time is devoted to non-ACT clients?*

If you were to think of a typical week, what percentage of your time involves some type of employment and educational service, including outreach, engagement, and job development?

Are you assigned as the primary care provider or coordinator for any clients? If so, how many and, of those, who have expressed employment and educational service needs? [This additional information provides context for how the specialist(s) may be employed within the team. As needed, further inquire about how caseload assignments are made (as primary, and/or as part of ITTs).]

Note: Specialists can use opportunities to conduct case management type interventions to engage clients around specialty. Cause for concern is when the specialist has to fill another need on the team, which prevents him or her from providing specialty interventions.

ITEM RESPONSE CODING

Inclusion Criteria

If two specialists are on the team: It is acceptable and encouraged to consider the cumulative percent of time devoted to specialty services for up to two individuals serving in this specialty role. Please see the note in the rating guidelines section regarding inclusion of team members who may not be formally designated as a specialist, but have assumed more specialty service responsibilities.

Exclusion Criteria

Refer to OS1 for general inclusion and exclusion criteria (e.g., at least 16 hours of week with team, attending at least two daily team meetings per week).

Rating Guidelines and Formula

Several criteria are considered when determining the rating for ST4. These criteria include the following:

1. Reported time in position (i.e., FTE);
2. Actual time devoted to specialty-related activities¹ while in the position; and
3. Qualifications of the specialist(s).

NOTE: Up to two team members may be considered in this rating. Even if the team formally has one team member designated as the employment specialist, evaluators are encouraged to prompt the team leader prior to the fidelity review to determine whether there is any other team member who assumes greater responsibility for delivering employment and educational services (see fidelity review orientation letter in Appendix A). Even if this secondary "employment specialist" does not meet minimal qualifications, they may positively contribute to this rating, which is in the spirit of the team sharing responsibility for services.

To Rate ST4, input data obtained from pre-fidelity survey and interviews into Table 16. Then use these data to complete Steps 1 – 3 below. If only one specialist on team, skip Step 2.

Table 16. Summary of Data Used to Rate Employment Specialist on Team		Employment Specialist	
Criteria		Primary Specialist	Secondary Specialist (if applicable)
A	FTE with ACT team (see pre-fidelity survey and interview data; (FTE = # of hours employed with ACT per week / 40}}		
B	Time devoted to specialty-related activities ¹ : estimated % of client contacts that involve an employment and educational service (interview data, cross-checked with other data sources ²)		
C	Meets minimal qualifications, which entails meeting local standards for certification or licensure as an employment specialist and has at least one year experience providing employment services and/or has advanced education that involved field training in employment and educational services (see under Step #3 below}		

Step 1. Determine Provisional Rating Given the Adjusted FTE (Criteria A and B in Table 16)

***Please refer to the TMACT Calculation Workbook to enter and compute these data.

- a. If **80% or more of client contacts involve specialist-related activities** (criterion B), per specialist report and other sources², **give full credit for the reported FTE on the team** (criterion A). Refer to Table 17 to determine provisional rating (Note: it remains "provisional" because we have yet to examine the impact of qualifications).

Example a1: Specialist is 1.00 FTE (i.e., 40 hrs/wk} and reports that 90% of contacts involve employment specialty and other sources support that estimate, then 1.00 FTE (i.e., actual FTE} is used, which provisionally rates a "5" based on Table 17.

- b. If **less than 80% of client contacts involve specialist-related activities** (criterion B), per specialist reports and/or other sources², calculate an adjusted FTE, which is then used to determine the provisional rating based on Table 17.

Table 17. Provisional Ratings Following Step 1.

FTE	Rating
1.00 +	5
0.75 - 0.99	4
0.50 - 0.74	3
0.25 - 0.49	2
0.00 - 0.24	1

Calculating the Adjusted FTE =

- If the specialist is **full-time with the team** (i.e., 1.0 for criterion A in Table 16): Add 10 to the estimated percent of time dedicated to specialist role (criterion B in Table 16), and divide by 100.

Example b1: A full-time employment specialist reported, and other data sources corroborated, that 50% of her time was spent providing specialty services. Her adjusted FTE would then be $50 + 10 = 60 / 100 = 0.60$ Adjusted FTE, provisionally rating a "3" based on Table 17. (Note: it remains "provisional" because we have yet to examine impact of qualifications}

Full-Time

- **If the specialist is part-time with the team** (i.e., less than 1.0 FTE reported for criterion A in Table 16), use the following formula to calculate the adjusted FTE:

(FTE on team, which is criterion A in Table 16) * (percent of client contacts involving specialty-related activities which is criterion B in Table 16)} + .05.

Example b2: An employment specialist was employed with the team for 24 hours a week, or 0.60 FTE. She estimated that 50% of her time was spent providing specialty services. $(0.60 \text{ (FTE on team, or criterion A)} * 0.50 \text{ (representing 50\%, or criterion B)}) + 0.05 = 0.35 \text{ Adjusted FTE}$, which provisionally rates a "2" based on Table 16.

Step 2. (Only complete if there are two specialists; otherwise skip to Step 3)

Aggregating FTE for Two Specialists: If two specialists are present, then go through Step 1 above for each specialist and add together the total adjusted FTE time and determine provisional rating based on Table 17.

Example c: A team has a designated employment specialist who is full-time (1.0 FTE) with the team. He reported that at least 75% of his client contacts involve employment and educational services; the evaluators could not find data that supported such a high estimate (e.g., only 25% of his chart note entries reflected any specialty services) and agreed that 50% was more accurate.

A second team member was interviewed; this person has been a longtime champion of competitive work and provides various supports for working clients. She works with the team four days a week at 0.80 FTE. She estimated that, of all the clients she meets with in a typical week, approximately 35% involve an employment and educational service. The evaluators found other evidence to support estimate.

Employment specialist 1 (full-time): $(50 \text{ (reflecting the 50\% estimated time in role)} + 10 \text{ (formula instructions to add "10")}) / 100 = 0.60 \text{ Adjusted FTE}$.

Employment specialist 2 (part-time): $(0.80 \text{ (reflecting her FTE on the team)} * 0.35 \text{ (reflecting 35\% time in specialty role)}) + 0.05 = 0.33 \text{ Adjusted FTE}$.

Aggregate Adjusted FTE = $0.60 + 0.33 = 0.93$ Total Adjusted FTE (Provisional "4" rating based on Table 17—recall, it remains "provisional" as we have yet to determine impact of qualifications standard).

Step 3. Qualifications Determination for Final Rating (criterion C in Table 16)

a. One specialist on team (see Step 1 examples above):

- **The provisional rating becomes final rating if the following qualifications are met:** Has at least one year experience providing employment services and/or has advanced education that involved field training in employment and educational services. Experience may include time spent in the current position only if specialist is at least 0.50 FTE and at least 65% of client contacts involve specialist-related activities. Preferably the specialist has training or experience in individual placement and support model (i.e., specific form of SEE that emphasized individual preferences and prompt placement in competitive employment).
- **The provisional rating is adjusted down to next lowest rating if above minimal qualifications are not met** (i.e., if the specialist in example a did not meet minimal qualifications, then her provisional "5" rating is reduced to a "4" rating; if specialist in example b1 did not meet minimal qualifications, her provisional "3" rating is reduced to a "2" rating).

b. Two Specialists on team (see Step 2 examples above):

- **Two unqualified staff:** The provisional rating is adjusted down to next lowest rating if *both* specialists do not meet above minimal qualifications.
- **One qualified and one unqualified staff:** If one specialist meets qualifications, but the other does not, then the final rating is the higher of the following two options: a) final rating is based solely on the one qualified staff or, b) final rating based on two unqualified staff (i.e., in example c described above, assume that Specialist 1 (adjusted

FTE of .60} met qualifications, but Specialist 2 (adjusted FTE of .33} did not. Their aggregate FTE is 0.93 FTE (provisional "4" rating), and would be reduced to a "3" as one specialist does not meet qualifications (option b). Alternatively, we could rate based only on the one qualified staff, Specialist 1 (option a). However, her adjusted FTE of 0.60 only earns a "3" rating on its own. Thus, in this example, both options result in a "3" rating.

¹Specialist-related activities: Estimated percent of client contacts that involve any activity associated with the specialty area. Qualifying client contacts include those where engagement practices are delivered while providing other case management services, as well as more obvious specialty-related interventions or assessments. To get full credit (i.e., to be rated according to actual FTE with the team), *at least 80%* of client contacts should involve a specialty-related activity.

²Supporting specialists' estimations: Evaluators are encouraged to consider other data sources to gauge the approximate amount of time spent in specialist activities. Evaluators should first consider the specialist's estimation, then cross-check that estimation with other data sources, such as activities reported in the daily team meeting, noted in the client log, and progress notes. If a significant discrepancy occurs, then evaluators should adjust this percentage, discussing with the specialist if possible to agree on a more accurate percentage of time devoted to specialist activities. Otherwise, evaluators should adjust reported percentage, keeping in mind the following heuristic guidelines:

- ☐ For a specialist who provides a *high degree* of employment and educational services (e.g., 80% or more), it is assumed that such a high level of practice will be evident across multiple data sources—e.g., chart review (majority of notes (at least 60%) written by this specialist indicates some employment and educational service), observation of daily team meeting (i.e., reported contacts involving employment and educational services, and scheduled contacts to address client's vocational needs), and a large breadth of employment and educational services are provided.
- ☐ For a specialist who provides a *moderate degree* of employment and educational services (e.g., 40% - 60%), it is assumed that a moderate level of practice will be evident across several data sources—e.g., chart review (some notes (e.g., 20% - 60%) written by this specialist indicates employment and educational service), observation of daily team meeting (i.e., reported contacts involving employment and educational services, and scheduled contacts to address client's vocational needs), the breadth of employment and educational services being provided may vary.
- ☐ For a specialist who provides a *low degree* of employment and educational services (e.g., 10% - 30%), it is assumed that there will be little evidence of such practice across multiple data sources—e.g., chart review (very few notes (< 20%) written by this specialist indicates some employment and educational service), observation of daily team meeting (i.e., very minimal mention of employment and educational services, if at all), and employment and educational services themselves may be lacking or very limited (e.g., majority of employment and educational services consists of helping clients prepare for job searches, such as resume development and assessment).

	1	2	3	4	5
ST4. Employment Specialist on Team	Less than 0.25 (actual or adjusted) FTE employment specialist with at least minimal qualifications OR criteria for a "2" rating met, except qualifications standards.	0.25 - 0.49 (actual or adjusted) FTE employment specialist with at least minimal qualifications OR criteria for a "3" rating met, except qualifications standards.	0.50 - 0.74 (actual or adjusted) FTE employment specialist with at least minimal qualifications OR criteria for a "4" rating met, except qualifications standards.	0.75 - 0.99 (actual or adjusted) FTE employment specialist with at least minimal qualifications OR criteria for a "5" rating met, except qualifications standards.	At least 1.0 (actual or adjusted) FTE employment specialist with at least minimal qualifications.

NOTE: If there is no employment specialist on the team, then rate this item a "1," but do not rate ST5 and ST6 if employment specialist vacancy has been less than 6 months. Also, rate employment specialists hired within past two months on this item, which will likely be a low rating, but do not rate on ST5 and ST6. If hired more than two months before review, rate new specialist on ST5 and ST6.

ST5. Role of Employment Specialist in Services

Definition: The employment specialist provides supported employment & education services. Core services include the following:

- (1) Engagement;
- (2) Vocational assessment;
- (3) Job development;
- (4) Job placement (including going back to school, classes);
- (5) Job coaching & follow-along supports (including supports in academic settings); and
- (6) Benefits counseling.

In addition to the idea of client choice as sole criterion and limited prevocational assessment, there are no requirements for demonstrating "work readiness," (e.g. demonstrating punctuality, participation in work crews).

Rationale: Work is integral to the recovery process for many clients and research has shown that following the core principles of Supported Employment & Education (SEE) lead to better work outcomes for adults with severe mental illness.

The core employment and educational services, which reflect the key principles of the evidence-based SEE model, assessed in this item are included in the table below:

DATA SOURCES (* Denotes primary data source)

Excel spreadsheet (columns E-I, and L)

Examine how many clients are working, where they are working, the type of position, how they got the position, and the number of clients receiving employment and educational services to guide interview questions. Note how many clients may be receiving other services (e.g., clubhouse) and the extent to which they're receiving them in lieu of what the employment specialist and ACT team provides.

Team Leader Interview

Describe the variety of services provided by the employment specialist [Prompt for roles described above.]

Can you think of any agency policies that get in the way of providing supported employment & education services (e.g., cannot assist when someone is actively abusing drugs)?

Employment Specialist Interview*

Can you describe the range of employment and educational services that you provide?

[Use their responses to guide whether you ask the questions listed below, and use reflections and summaries as it pertains to below questions as you receive information here.]:

How do you motivate clients to consider competitive work? [Seek examples of how employment specialist may bring up the subject of work with clients. Also ask if they have received any training in motivational interviewing, and if so, how that is used in engagement.]

Can you describe the vocational assessment process? What forms are used? What information is collected?
[Specifically ask if they are using the Career Profile.]

How is it determined who is assessed and when assessments are completed?

How is the information that is gathered in the assessment used? [Listen for language pertaining to job search and ongoing supports and ask for examples in who has an assessment and how it has been used. Also ask to see a completed assessment if you do not see one in the chart review.]

Think about a recent person you helped to get a job or go back to school. What was the timeframe between their voicing interest and subsequent steps (e.g., completing assessment, reaching out to employers, and getting the job)?

[Refer to Excel spreadsheet for specific examples of clients the team reported the team assisted in getting a job.]

Do you do any job development? [If a description is needed, job development entails reaching out to local employers and businesses to develop relationships and discover potential right-fit job matches.]

[If yes, ask for examples of businesses the specialist has visited for job development, whether a tracking sheet listing dates of contact is maintained that includes person contacted, summary and plan.]

[If yes to job development] **Can you share with me what you say when your approach employers for job development?**

What kind of follow-along supports do you provide? *Could you give an example of the last time you did job coaching — when was that? What about follow-along supports or coaching for those clients who are going back to school?*

What is your understanding of how work may impact benefits, and work incentive programs. Do you provide benefits counseling? Ask for examples.

How many clients are currently working in a competitive setting? (Cross-reference with *Excel spreadsheet*). **What about clients working in noncompetitive settings (e.g., volunteer, transitional employment, work crews)—what are those settings?**

How do you help match clients to jobs or placements? (Look for language suggesting that this is a client-driven process; present an ambitious "dream job" scenario to understand the follow-up questions and responses.)

Of all the businesses employing clients, which one employs the highest number—what number is that? (Response provides some information about job preferences - e.g., if 50% are employed at the same business, then it is doubtful that they all wanted a similar job.)

Do you ever help clients go back to school or access courses if they haven't ever been in school? Ask for examples.

If we have not yet heard of it yet, can you share with us an example of your practice that you think best reflects your work as the team's employment specialist? [With this example, try to clarify how far back the example dates.]

Client Interview

***Is there anyone here who is currently working or has worked in past year?
Have any of you recently gone back to school? Tell me about your work/school.
Did the team help you get and keep that job or stay in school?***

[Look for examples of how the employment specialist assists clients around employment or school goals and whether there appears to be a focus on competitive employment. Attend to whether there is clear interest in working that is not being addressed by team, esp. employment specialist.]

ITEM RESPONSE CODING

Rating Guidelines

Primarily rely on information provided by employment specialist (s), but consider all information gathered across sources and investigate discrepancies. Review progress notes of clients who are receiving employment and educational services; these notes may be weekly summary notes. Refer to Table 18 below to determine if criteria are met at all, partially, or fully. If all six services are provided by the employment specialist (s), rate as a "5."

"N/A" Criteria: If no person is hired into the employment specialist position at the time of the review (thereby receiving a "1" rating on ST4}, or a recently hired staff person has been in the position for less than two months, then do not rate this item and exclude from ST subscale and Total Score calculations. If a person is hired into position, but still scores a "1" due to not meeting specified criteria, then assess and rate this role item.

Table 18. Role of Employment Specialist in Services

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Service #1: Engagement	There is very limited evidence of engagement activities when reviewing multiple data sources (e.g., progress notes, client log, client interviews}.	There is some evidence of engagement, but this does not appear to be a result of a planned strategy (e.g., work is conveniently discussed while taking a client shopping}. OR There is evidence that <i>who</i> is targeted for engagement is based on inconsequential attributes (e.g., sobriety, medication adherence, symptom stability}.	The specialist increases clients' interests in the prospect of work and educates them about their opportunities and the benefits of working. There is concerted effort to be scheduled to meet with clients for engagement, even if within the context of delivering another service. Ideally, the specialist is skilled at MI, using such techniques to address ambivalence about working. It is not uncommon for the whole team to assume a larger role in engagement strategies; however, it should not be at the exclusion of the specialist typically taking the lead in most cases.

Table 18. Role of Employment Specialist in Services

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Service #2: Vocational assessment ⁷	No vocational assessment is conducted and documented, OR The vocational assessment process is needlessly lengthy and stalls the actual job placement, where more useful assessment data may be collected.	The prevocational assessment is limited in its utility given the information that is gathered, and/or is inconsistently conducted and documented. There is little evidence of attending to client preferences. There is limited appreciation for collecting assessment data while the client is employed. Partial credit is also warranted if the initial assessment is comprehensive but there are no updated assessments.	The specialist conducts assessments to gather information about work history, strengths, and interests, as well as the extent to which symptoms may have interfered with previous jobs. Employment specialist assesses for clients' preferences, especially regarding disclosure of mental illness and degree of employment specialist's involvement. The assessment itself (or Career Profile) serves a living document, guiding both job searches about also how to provide ongoing supports. Completion of a prevocational assessment should not delay efforts to focus on job placement itself. More useful assessment information is gathered once client has been placed in a job. <u>To receive full credit</u> , vocational assessment data are complete, updated, and reflecting most or all of the information described above.
Service #3: Job development	Job development is focused on employment that is not competitive. Or job development is not provided, or provided very minimally (e.g., only one or two examples were provided, dating back to previous year}.	Some recent examples of job development are provided, but this important task is clearly not prioritized, is not driven by client preferences and/or has artificial parameters (e.g., specialist only conducts job development in limited areas -- geographical, vocational area/employer}. Job development is conducted less often than the equivalent of one day a week per 50 clients.	Specialist develops relationships with local businesses through systematic job development and educates them about the services that the employment specialist provides, collects information about positions, and, ideally, determines potential for job carving options (e.g., whether the duties of one part-time position could be broken into two part-time positions}. The equivalent of at least one day a week per 50 clients is devoted to job development.
Service #4: Job placement (including going back to school, classes}	Job placement is not customized to meet clients' preferences (e.g., specialist relies on a couple of go-to employers}. If specialist considers behaviors or symptoms they believe reflect "work readiness," beyond mere expression of one's desire to work or return to school, such as substance use, medication adherence, and symptom stability, <u>then rate as no credit if "work readiness" criteria appear to significantly impact job placement activities.</u>	Job placement is somewhat customized (i.e., there is attention to preferences, but a reliance on select employers} and/or placement itself is not "rapid" (i.e., there is considerable delay between voiced interest in work and contact with employers}. If specialist considers behaviors or symptoms they believe reflect "work readiness" beyond mere expression of one's desire to work or return to school, such as substance use, medication adherence, and symptom stability, <u>then rate partial if "work readiness" criteria appear to minimally impact job placement activities.</u>	Specialist assists clients in locating jobs that meet their preferences, and does so in a rapid manner. There is a relatively short amount of time (fewer than 30 days} between when the client voices interest in working and initial contact with an employer. Specialist assists with completing applications, resumes, and role-playing interviews. This could also include assistance with going back to school or accessing coursework.

⁷ Use the Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate the percentage of charts that included a vocational assessment in line with supported employment & education principles.

Table 18. Role of Employment Specialist in Services

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Service #5: Job coaching & follow-along supports (including supports in academic settings}	Follow-along support is not provided, or on very rare occasion.	Some evidence of follow-along supports was observed, but this activity was clearly limited (e.g., examples reflected phone support with clients, with no examples of face-to-face on/off site job coaching}.	Per the client's preferences and consent, specialist provides support on/offsite to assist client in training and learning skills needed for job, can serve as a liaison between client and employer, and problem-solves issues as they arise. Although examples of on-site job coaching are not necessary for full credit, the absence of job coaching should not be due to a lack of skills on the part of the specialist. This role also includes providing supports in academic settings.
Service #6: Benefits counseling	Benefits counseling is not provided by the specialist, or is extremely limited in content and application. Specialist rarely assists clients in obtaining this information from another source.	Specialist's benefits knowledge is limited (e.g., specialist is aware of how benefits are impacted by work, but unaware of programs that may maximize on clients' return, such as PASS}, and/or benefits counseling is not widely provided.	Every step of the way, specialist is providing counseling to the client regarding their benefits and how they are affected by varying levels of employment, providing clients with information to help them to make informed decisions about returning to work. NOTE: The expectation is not for the specialist to know all of the in's and out's of SSI/SSDI, but it is important for them to at least know the fundamentals and be actively involved in working with the client to schedule meetings with a benefits counselor who may know more of these specifics. There is also expectation that the specialist understands enough about how work impacts benefits to correct misinformation, and to use educational strategies as part of engagement.

	1	2	3	4	5
ST5. Role of Employment Specialist In Services	The employment specialist provides 2 or fewer employment services.	3 employment services are provided (3 are absent} OR 4 services are PARTIALLY provided (2 are absent}.	4 employment services are provided (2 are absent}, but up to 3 services are only PARTIALLY provided OR 5 employment services are provided (1 is absent} OR ALL 6 services are provided, with 4 or more PARTIALLY provided.	ALL 6 employment services are provided, but up to 3 services are only PARTIALLY provided.	ALL 6 employment services are FULLY provided.

ST6. Role of Employment Specialist within Team

Definition: The employment specialist is a key team member in the service planning for clients who want to work or are currently working. The employment specialist performs the following functions WITHIN THE TEAM:

- (1) Modeling skills and consultation;
- (2) Cross-training to other staff on the team to help them to develop supported employment & education approaches with clients in the team;
- (3) Attending all daily team meetings; and
- (4) Attending all treatment planning meetings for clients with employment goals.

Rationale: The employment specialist influences fellow team members' practices with clients by motivating team members to discuss work more often with clients, conduct preliminary assessments, and provide ongoing supports.

DATA SOURCES (* Denotes primary data source)

Daily Team Meeting

Observe whether and how the employment specialist contributes to discussions related to employment and/or school during the daily team meeting. Do they appear to be referred to within the team?

Employment Specialist Interview*

How often do you attend the daily team meetings? What do you see as your role in that meeting?

Do you attend treatment planning meetings for the clients who have employment or education goals? How do you select the ones you attend? What do you see as your role in that meeting? [Prompt for examples.]

Have you provided more formal trainings to the team related to your area of specialty?
[Prompt for details - *when, how often, what was the topic?*]

Do you ever provide more individual consultation with team members? [If yes:]
How often? Can you give me an example?

What parts of your role do you find to be challenging to fulfill or carry out day-to-day?

What areas of education or training do you think would be helpful for you to do an even better job in your role?

Clinician Interview***How has your work with clients been influenced by the employment specialist?****Do they help you in any way to better work with clients who have employment goals?**In what ways do you view the employment specialist as a resource to you?***ITEM RESPONSE CODING****General Frequency Guidelines**

- **Modeling and Consultation:** Modeling includes demonstration of behaviors and attitudes consistent with evidence-based SEE in meetings or in the field. To receive credit, they are not expected to be full-fledged experts in SEE, but are gaining expertise and are viewed as more expert in SEE than other team members. Consultation includes informal and ad hoc assistance with specific clinical cases (i.e., case-based consultation) and/or education specific to the specialist's content area provided frequently, such as at least monthly within the past 6 months.
- **Cross-training:** Includes formal training (e.g., didactic, skill-based teaching) to other team members at least 20 minutes in duration provided at least one time in the past 6 months. To receive credit, the topic area should be judged to be relevant and helpful given the evidence-based practice guidelines.
- **Daily Team Meetings:** Regularly attends all daily team meetings (except when pre-planned activities conflict with meeting) at a rate commensurate with their hours and schedule with the team. If the team meets four days a week, which is the rate at which the specialist attends, credit for this function. However, if the team is meeting less often than three days a week, then do not credit for this function. Similarly, credit if the specialist works 4x10 hour shifts each week and attends four days per week.
- **Treatment Planning Meetings:** Attends the majority of treatment planning meetings for clients with employment or education goals (long-term or short-term goals/objectives). To receive credit, the specialist attends planning meetings for at least 50% of those with employment or education goals, where such meetings are held every 6 months. If planning meetings are held less often than 6 months, no credit for this function is to be given.

Rating Guidelines

Use the interview with the employment specialist as primary data source. Cross-reference with interview with clinician. Reconcile any discrepancies with follow-up interview questions with the team leader. To receive full credit, the employment specialist provides all four functions within the team.

"N/A" Criteria: If no person is hired into the employment specialist position at the time of the review (thereby receiving a "1" rating on ST4) or a recently hired staff person has been in the position for less than two months, then do not rate this item and exclude from ST subscale and Total Score calculations. If a person is hired into position, but still scores a "1" due to not meeting specified criteria, then assess and rate this role item.

	1	2	3	4	5
ST6. Role of Employment Specialist Within Team	The employment specialist does not perform any of the 4 functions within the team.	1 function is performed within the team.	2 functions are performed within the team.	3 functions are performed within the team.	ALL 4 functions are performed within the team.

ST7. Peer Specialist on Team

Definition: The team has at least 1.0 FTE team member designated as a peer specialist who meets local standards for certification as a peer specialist. If peer certification is unavailable locally, minimal qualifications include the following:
 (1} Self-identifies as an individual with a serious mental illness who is currently or formerly a recipient of mental health services;
 (2} Is in the process of their own recovery; and
 (3} Has successfully completed training in wellness management and recovery (WMR} interventions.

Rationale: Peer specialists play an important role within ACT, delivering a range of practices across the service continuum, including WMR services. Some research has concluded that including clients as staff on case management teams improves the practice culture, making it more attuned to client perspectives and person-centered approaches to care.

DATA SOURCES (* Denotes primary data source}**Team Survey***

Refer to item #1, noting FTE and qualifications. Is there more than one peer specialist on the team?
 If there is more than one specialist, then separate out qualified and unqualified FTE time.

Excel spreadsheet (column K)

How many clients are reported to be receiving formal and/or manualized WMR services directly from the team? This may help gauge the percent of time dedicated to specialist role (I.e., whether an adjusted FTE should be calculated), although it is possible that only informal WMR strategies are being used.

Chart Review

Cross-walk what specialist's report as the percent of contacts that involve specialist services with what is observed in the review of progress note entries (e.g., what percent of progress note entries by peer specialist have some notation of WMR services, inclusive of assessment and engagement, and both formal and informal WMR?)

Peer Specialist Interview*

Have you completed any formal training in wellness management and recovery interventions? (e.g., peer counselor training, Wellness Recovery Action Plans (WRAP), IMR; note that the peer specialist does not need to have received training in these example interventions to meet criterion #3.)

What experiences make you qualified to be the team's peer support specialist? [Listen for whether minimal qualifications have been met, and follow-up with additional questions, as needed.]

Are you assigned as the primary care provider or coordinator for any clients? If so, how many? How did you come to be assigned to be the primary for those clients? [This additional information provides context for how the specialist(s) may be employed within the team.]

Approximately what percentage of your time is spent providing services specific to your specialty (e.g., WMR services, client advocacy)? In other words, if you were to think of a typical week, what percentage of client contacts involve some type of peer specialist services, including outreach and engagement? [Further probe for how much of their time is spent doing basic case management and/or paraprofessional tasks— e.g., medication deliveries, wellness check-ins, and transportation. Although peer-related services can be paired with case management services, they should not be exclusively delivered within the context these services.]

ITEM RESPONSE CODING

Inclusion Criteria

If two specialists are on the team: It is acceptable and encouraged to consider the cumulative percent of time devoted to specialty services for up to two individuals serving in this specialty role. Please see the note in the rating guidelines section regarding inclusion of team members who may not be formally designated as a specialist, but have assumed more specialty service responsibilities.

Exclusion Criteria

Refer to OS1 for general inclusion and exclusion criteria (e.g., at least 16 hours of week with team, attending at least two daily team meetings per week).

Rating Guidelines

Several criteria are considered when determining the rating for ST7. These criteria include the following:

1. Reported time in position (i.e., FTE);
2. Actual time devoted to specialty-related activities¹ while in the position; and
3. Qualifications of the specialist(s). *See notes following Step 3.*

NOTE: Up to two team members may be considered in this rating. Even if the team formally has one team member designated as the peer specialist, evaluators are encouraged to prompt the team leader prior to the fidelity review to determine whether any other team member who assumes greater responsibility for delivering peer support services (see fidelity review orientation letter in Appendix A). Even if this secondary "peer specialist" does not meet minimal qualifications, they may positively contribute to this rating, which is in the spirit of the team sharing responsibility for services.

To rate ST7, input data obtained from pre-fidelity survey and interviews into Table 19.
Then use these data to complete Steps 1 – 3 below.

Table 19. Summary of Data Used to Rate Peer Specialist on Team		Peer Specialist	
Criteria		Primary Specialist	Secondary Specialist (if applicable)
A	FTE with ACT Team (see pre-fidelity survey and interview data; (FTE = # of hours employed with ACT per week / 40))		
B	Time devoted to specialty-related activities [†] : estimated % of client contacts that involve a peer support service (interview data, cross-checked with other data sources [‡])		
C	Meets minimal qualifications, which entails meeting local standards for certification as a peer specialist. If peer certification is unavailable locally, minimum qualifications include the following: (1) self-identifies as an individual with a serious mental illness who is currently or formerly a recipient of mental health services; (2) is in the process of their own recovery; and (3) has successfully completed training in WMR interventions (see under Step #3 below).		

Step 1. Determine Provisional Rating Given the Adjusted FTE (Criteria A and B in Table 19)

***Please refer to TMACT Calculation Workbook to enter and compute these data.

- a. If **80% or more of client contacts involve specialist-related activities** (criterion B, per specialist report and other sources[‡]), **give full credit for the reported FTE on the team (criterion A)**. Refer to Table 20 for provisional rating. (Note: it remains "provisional" because we have yet to examine impact of qualifications).

Example a: The specialist is 0.80 FTE (i.e. 32 hrs/wk) and reports that 90% of contacts involve peer specialty and other sources support that estimate, then 0.80 FTE is used (i.e., actual FTE), which provisionally rates a "4" based on Table 20).

- b. If **less than 80% of client contacts involve specialist-related activities** (criterion B), per specialist reports and/or other sources[‡] calculate an adjusted FTE, which is used to determine the provisional rating based on Table 20.

Table 20. Provisional Ratings Following Step 1.

FTE	Rating
1.00 +	5
0.75 - 0.99	4
0.50 - 0.74	3
0.25 - 0.49	2
0.00 - 0.24	1

Calculating the Adjusted FTE =

- If the specialist is **full-time with the team** (i.e., 1.0 for criterion A in Table 19): Add 10 to the estimated percent of time dedicated to specialist role (criterion B in Table 19), and divide by 100.

Example b1: A full-time peer support specialist reported, and other data sources corroborated, that 50% of her time was spent providing specialty services. Her adjusted FTE would then be $50 + 10 = 60 / 100 = 0.60$ Adjusted FTE, provisionally rating a "3" based on Table 20. (Note: it remains "provisional" because we have yet to examine impact of qualifications)

- If the specialist is **part-time with the team** (i.e., less than 1.0 FTE reported for criterion A in Table 19), use the following formula to calculate the adjusted FTE:

$((\text{FTE on team, which is criterion A in Table 19}) * (\text{percent of client contacts involving specialty-related activities}^{\dagger}, \text{ which is criterion B in Table 19})) + 0.05.$

Example b2: A peer support specialist was employed with the team for 24 hours a week, or 0.60 FTE She estimated that 50% of her time was spent providing specialty services.

$(0.60 \text{ (FTE on team, or criterion A)} * 0.50 \text{ (representing 50\%, or criterion B)}) + 0.05 = 0.35$ Adjusted FTE, which provisionally rates a "2" based on Table 20.

Step 2. (Only complete if there are two specialists; otherwise skip to Step 3)

Aggregating FTE for Two Specialists: If there are two specialists in position, go through Step 1 for each specialist and add together total adjusted FTE time. Determine provisional rating, Table 20.

Example c: A team has a designated peer support specialist who is full-time (1.0 FTE) with the team. He reported that at least 75% of his client contacts involve peer support services; the evaluators could not find data that supported such a high estimate (e.g., only 25% of his chart note entries reflected any specialty services) and agreed that 50% was more accurate.

A second team member was interviewed; this person has been a recipient of mental health services in the past and has been open about this with clients, as well as assuming some responsibility for leading a WRAP group. She works with the team four days a week at 0.80 FTE. She estimated that, of all the clients she meets with in a typical week, approximately 25% involve a peer support service. The evaluators found other evidence to support that estimate.

Peer Support specialist 1 (full-time): (50 (reflecting the 50% estimated time in role) + 10 (formula instructions to add "10")) / 100 = 60 / 100 = 0.60 Adjusted FTE.

Peer Support specialist 2 (part-time): (0.80 (reflecting her FTE on the team) * 0.20 (reflecting 25% time in specialty role)) + 0.05 = 0.33 Adjusted FTE.

Aggregate Adjusted FTE = 0.60 + 0.33 = 0.93 Total Adjusted FTE (Provisional "4" rating, Table 20 – recall, it remains "provisional" as we have yet to determine impact of qualifications standard)

Step 3. Qualifications Determination for Final Rating (criterion C in Table 19).

One specialist on team (see Step 1 examples above):

- **Provisional rating becomes final rating if the following qualifications are met:** Meets local standards for certification or licensure as a peer specialist. If peer certification is unavailable locally, minimum qualifications include the following: (1) self-identifies as an individual with a serious mental illness who is currently or formerly a recipient of mental health services; (2) is in the process of their own recovery; and (3) has successfully completed training in WMR interventions. Although not required, it is preferred that the peer has had similar experiences as ACT clients, such as having recovered from a psychiatric illness common of ACT clients), having been a recipient of public mental health services, and/or has experienced complications typical of living with a serious mental illness, such as hospitalization, stress within the family, and psychotropic medication side effects}.
- **Provisional rating is adjusted down to next lowest rating if above minimal qualifications are not met** (i.e., If the specialist in example a did not meet minimal qualifications, her provisional rating of a "4" becomes a "3;" if specialist in example b1 above did not meet minimal qualifications, her provisional "3" rating is reduced to a "2" rating.}.

Two Specialists on Team (see Step 2 examples above):

- **Two unqualified staff:** The provisional rating is adjusted down to the next lowest rating if *both* specialists do not meet above minimal qualifications.
- **One qualified and one unqualified staff:** If one specialist meets qualifications, but the other does not, the final rating is the higher of the following two options: a) final rating is based solely on the one qualified staff or, b) final rating based on two unqualified staff (i.e., in example c described above, assume that Specialist 1 (adjusted FTE of 0.60) met qualifications, but Specialist 2 (adjusted FTE of 0.33 FTE) did not. Their aggregate FTE is 0.93 FTE (provisional "4" rating), and would be reduced to a "3" as one specialist does not meet qualifications (option b). Alternatively, we could rate based only on the one qualified staff, Specialist 1 (option a). However, her adjusted FTE of 0.60 only earns a "3" rating on its own. Thus, in this example, both options would result in a "3" rating.

† **Specialist-related activities:** Estimated percent of client contacts that involve any activity associated with the specialty area. Qualifying client contacts include those where engagement practices are delivered while providing other case management

services, as well as more obvious specialty-related interventions or assessments. To get full credit (i.e., to be rated according to actual FTE with the team), *at least 80%* of client contacts should involve a specialty-related activity.

‡**Supporting specialists' estimations:** Evaluators are encouraged to consider other data sources to gauge the approximate amount of time spent in specialist activities. Evaluators should first consider the specialist's estimation, then cross-check that estimation with other data sources, such as activities reported in the daily team meeting, noted in the client log, and progress notes. If a significant discrepancy occurs, evaluators should adjust this percentage, discussing with specialist if possible to agree on a more accurate percentage of time devoted to specialist activities. Otherwise, evaluators should adjust reported percentage, keeping in mind the following heuristic guidelines:

- For a specialist who provides a *high degree* of peer support services (e.g., 80% or more), it is assumed that such a high level of practice will be evident across multiple data sources, reflecting both formal (e.g., WRAP or IMR) and informal wellness interventions-e.g., chart review (majority of notes (at least 60%) written by this specialist indicates some peer support service), observation of daily team meeting (i.e., reported contacts involving WMR and peer support services, and scheduled contacts to address client's WMR needs), and a large breadth of peer support and WMR services being provided. Although informal WMR services can be easily bundled with many case management tasks, including medication deliveries, the expectation is that there are many strategic opportunities for WMR services not attached to such activities.
- For a specialist who provides a *moderate degree* of peer support services (e.g., 40% - 60%), it is assumed that a moderate level of practice will be evident across several data sources-e.g., chart review (some notes (e.g., 20% - 60%) written by this specialist indicates peer support service), observation of daily team meeting (i.e., reported contacts involving peer support services, and scheduled contacts to address client's WMR needs), the breadth of peer support and WMR services being provided may vary.
- For a specialist who provides a *low degree* of peer support services (e.g., 10% - 30%), it is assumed that there will be little evidence of such practice when reviewing multiple data sources-e.g., chart review (very few notes (< 20%) written by this specialist indicates some peer support service), observation of daily team meeting (i.e., very minimal mention of peer support and WMR services, if at all), and peer support services themselves may be lacking or very limited (e.g., majority of peer support services consists of discussions about symptom management). Peer Specialists used primarily to do wellness or symptom checks, medication deliveries, and/or transportation are not to be credited highly if this is the only time they are reporting any WMR interventions.

	1	2	3	4	5
ST7. Peer Specialist on Team	Less than 0.25 (actual or adjusted) FTE peer specialist with at least minimal qualifications OR criteria for a "2" rating met, except qualifications standards.	0.25 - 0.49 (actual or adjusted) FTE peer specialist with at least minimal qualifications OR criteria for a "3" rating met, except qualifications standards.	0.50 - 0.74 (actual or adjusted) FTE peer specialist with at least minimal qualifications OR criteria for a "4" rating met, except qualifications standards.	0.75 - 0.99 (actual or adjusted) FTE peer specialist with at least minimal qualifications OR criteria for a "5" rating met, except qualifications standards.	At least 1.0 (actual or adjusted) FTE peer specialist with at least minimal qualifications.

NOTE: If there is no peer specialist on the team, rate this item as a "1," but do not rate ST8 as long as peer specialist vacancy has been less than 6 months. Also, rate peer support specialists hired within past two months on this item, which will likely be a low rating, but do not rate on ST8. If hired more than two months before review, rate new specialist on ST8 as well.

ST8. Role of Peer Specialist

Definition: The peer specialist performs the following functions:

- (1) Coaching and consultation to clients to promote recovery and self-direction (e.g., preparation for role in treatment planning meetings);
- (2) Facilitating wellness management and recovery strategies (e.g., Wellness Recovery Action Plans (WRAP), Illness Management and Recovery (IMR), or other deliberate wellness strategies);
- (3) Participating in all team activities (e.g., treatment planning, chart notes) equivalent to fellow team members;
- (4) Modeling skills for and providing consultation to fellow team members; and
- (5) Providing cross-training to other team members in recovery principles and strategies.

Rationale: Some research has concluded that including clients as staff on case management teams improves the practice culture, making it more attuned to client perspectives.

DATA SOURCES (* Denotes primary data source)

Team Survey

Review team's response to item #13 regarding whether the peer specialist facilitates any groups.

Excel spreadsheet (column K)

Examine whether and how many clients receive manualized WMR services directly from the ACT team, and the type of service(s) provided. Use this information to guide interview questions below.

Daily Team Meeting

Observe whether and how the peer specialist contributes to discussions related to WMR services and principles during the daily team meeting. Do they appear to be referred to within the team for guidance and/or consultation?

Team Leader Interview

Are there activities or services the peer specialist is not allowed to do that most other team members are engaging in?

Can they access client records, contribute to treatment planning and assessment, document contacts in progress notes?

[Query for whether the peer specialist can serve as the primary care coordinator for clients -if not, is the reason applicable to qualifications that apply to other non-peer staff (e.g., minimal educational qualifications)?]

Describe the variety of services provided by the peer specialist. [Prompt for roles described above.]

Peer Specialist Interview*

How would you describe your relationship with the individuals served by the ACT team—how do you view them and how do you think they view you?

What kind of services do you provide to clients? [Use their response to guide whether/how to ask any of the following questions. Refer to Functions #1 and #2 (esp. informal WMR) in Table 21. Also note whether any specific groups facilitated by the peer specialist are listed in the team's response to item #13 in the Team Survey.]

Can you tell us more about any wellness management and recovery services you provide to clients [prompt for WRAP, IMR, or any other manualized approach]? In what ways do you use [insert whatever formal, manualized, WMR they reported using]? How often do you provide these services?

Are you familiar with what a psychiatric advanced directive is? Have you assisted clients in completing a psychiatric advanced directive? [Prompt for examples.]

What do you think is the most important function of your role as the peer specialist? [Prompt for whether and how a recovery philosophy is steering the peer specialist's practice in how they work with clients.]

To what extent have you helped clients understand their own role in their treatment or prepare for their treatment planning meetings?

Have you worked with someone who was not interested in taking some or all of their medications? Can you describe for me the types of conversations you've had with them about these decisions [or what types of conversations you imagine having if you have not yet such clients]?

Do you feel like you are treated as an equal professional on the team? Are there some things that you are not able to do because of your position? Is your opinion valued as much as other team members? [if no, ask for examples]

Do you ever provide formal training to other team members? [If yes:] **When and what kinds of topics do you cover?**

Do you ever provide consultation to other team members to help them to better understand your role or the services you provide? Or to help them to also learn to provide some of those services themselves? [Prompt for examples where the peer specialist may have advocated for a client, even if in opposition to team members.]

If we have not yet heard of it yet, can you share with us an example of your practice that you think best reflects your work as the team's peer specialist? [With this example, try to clarify how far back the example dates.]

What parts of your role do you find to be challenging to fulfill or carry out day-to-day?

What areas of education or training do you think would be helpful for you to do an even better job in your role?

Clinician Interview	
<p><i>How has your work with clients been influenced by the peer specialist? Do you view the peer specialist as a resource?</i></p> <p><i>Has the peer specialist shared any aspects of their own personal recovery story?</i></p>	
Client Interview	
<p><i>Do you know who the team peer specialist is—[Insert the name of the peer specialist if no one knows]? How often do you see the team peer specialist?</i></p> <p><i>What kinds of things do you talk about with the peer specialist? How have they helped you?</i></p> <p><i>Do you have a relapse prevention plan? Did anyone help you create this plan?</i></p>	
ITEM RESPONSE CODING:	
General Frequency Guidelines	
<ul style="list-style-type: none"> ② Cross-training: Includes formal training (e.g., didactic, skill-based teaching) to other team members at least 20 minutes in duration provided at least one time in the past 6 months. ② Modeling and Consultation: Modeling includes demonstration of behaviors and attitudes consistent with a recovery-oriented, wellness management approach to service delivery. Such modeling may occur meetings or in the field. Consultation includes informal and ad hoc assistance with specific clinical cases (i.e., case-based consultation). To receive credit for Modeling and Consultation, the peer specialist must clearly embrace and model a recovery philosophy. 	
Rating Guidelines	
<p>Use Table 21 below to guide ratings. Use peer specialist interview as primary data source, with client interviews and chart reviews to back-up conclusions. If the peer specialist fulfills all four functions within the team, rate as a "5." Cross-training should be provided within the past 6 months.</p>	

"N/A" Criteria: If no person is hired into the peer support specialist position at the time of the review (thereby receiving a "1" rating on ST7) or a recently hired staff person has been in the position for less than two months, then do not rate this item and exclude from ST subscale and Total Score calculations. If a person is hired into position, but still scores a "1" due to not meeting specified criteria, then assess and rate this role item.

Table 21. Role of Peer Specialist

Function	No Credit	Partial Credit	Examples/Guidelines	Full Credit
	Function #1: Coaching and consultation to clients to promote recovery, self-direction, and independence	There is no evidence that the peer specialist provides any coaching or consultation to clients to promote recovery and self-direction.	The peer specialist provides some coaching and consultation to clients to promote recovery and self-direction, but it is less consistently provided.	
Function #2: Facilitating WMR strategies	There is no evidence that the peer specialist is facilitating any specific wellness management strategies with clients served on the team.	The peer specialist provides some WMR services, but it is limited (e.g., they are only working with a few clients on WRAP or IMR or provide fewer <u>informal</u> WMR strategies than are listed in the next column for full credit}. The peer specialist may be accessing manualized WMR material, but in a very informal and inconsistent manner (note: targeted use of IMR is an acceptable use of this evidence-based practice, where carefully selected modules are focused on for a given client}.		The peer specialist takes a lead role within the team on implementing WMR strategies. These can be formal/manualized <u>or</u> informal strategies: <p>Formal/Manualized:</p> <ul style="list-style-type: none"> • Group or individual IMR; • Group or individual WRAP; • Facilitating Psychiatric Advance Directives <p>Informal:</p> <p>Working with clients on <u>all</u> of the following:</p> <ul style="list-style-type: none"> • Providing targeted psychoeducation about mental illness and medications; • Identifying early warning signs for relapse and lapses; • Identifying triggers for relapses and lapses; and • Developing a relapse prevention plan.

Table 21. Role of Peer Specialist

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #3: Participating in all team activities equivalent to fellow team members	There is evidence that the peer specialist does not fully participate in all team activities as is consistent with other team members. There may be one or more limitations and the peer specialist does not appear to be treated as an equal among other staff.	There is one limitation in the role of the peer specialist as compared to other team members, but the peer specialist appears to be treated as an equal among other professionals, per observations and interviews.	The peer specialist is treated just like other team members and fully and actively participates in all team activities such as: <ul style="list-style-type: none"> • Daily team meetings; • Treatment planning meetings; • Documentation within clients' charts; • Community-based contacts with clients; • Assignment as a "primary" for various interventions indicated within the treatment plan given that applicable qualifications are met to assume such a role; In some states or agencies, peer specialists do not provide crisis coverage, which would be an acceptable exception. Further, any exclusion from team activities is due to qualifications that go beyond the peer status alone.
Function #4: Modeling skills for and providing consultation to fellow team members	The peer specialist does not provide modeling or consultation to other team members.	The peer specialist provides modeling and consultation to other team members but it is either inconsistently provided or inconsistently reported by other team members OR The peer specialist provides either modeling or consultation, but not both.	The peer specialist regularly provides modeling and consultation, as consistently reported by other team members as well as the peer specialist. Modeling and consultation must reflect a recovery philosophy. <p>Modeling includes demonstration of behaviors and attitudes consistent with recovery-oriented and WMR services in the daily team meeting and other meetings or in the field. To get full credit, other team members are influenced by the peer's words and actions.</p> <p>Consultation includes informal and ad hoc assistance with specific clinical cases (i.e., case-based consultation) provided at least monthly within the past six months. To get full credit, others see the peer as a helpful resource and seek the peer out for information and guidance.</p>
Function #5: Providing cross-training to other team members in recovery principles and strategies	Peer specialist does not provide cross-training or has not within the past six months.	Peer specialist has provided some cross-training, but it has only been to a few team members or less than 20 minutes in duration in the past six months.	Peer specialist consistently provides cross-training in recovery principles and strategies. <p>Cross-training includes formal training (e.g., didactic, skill-based teaching) to other team members at least 20 minutes in duration provided at least one time in the past 6 months.</p>

ST8. Role of Peer Specialist	1	2	3	4	5
	The peer specialist performs 1 or fewer functions on the team.	2 functions are FULLY performed (3 are absent) OR 2 to 3 functions performed, 1 to 2 PARTIALLY.	3 functions are FULLY performed (2 are absent or PARTIAL) OR 4 to 5 functions PARTIALLY.	4 functions are FULLY performed (1 is absent or PARTIAL).	ALL 5 functions are FULLY performed.

CP1. Community-Based Services

Definition: The team works to monitor status and develop skills in the community, rather than in-office. The team is oriented to bringing services to the client, who, for various reasons, has not effectively been served by office-based treatment.

Rationale: Contacts in natural settings (i.e., where clients live, work, and interact with other people) are thought to be more effective than when they occur in hospital or office settings, as skills may not transfer well to natural settings. Furthermore, the clinician can conduct a more accurate assessment of his or her community setting as the clinician can make direct observations rather than relying on self-report. Medication delivery, crisis intervention, and networking are more easily accomplished through home visits.

DATA SOURCES (* Denotes primary data source)

Chart Review* - Chart Review Log Part I (p. 195-196) and Chart Review Tally Sheet Part I (p.197-198)

Calculate the ratio of face-to-face community-based contacts to the total number of face-to-face contacts across the randomly selected charts reviewed. Then determine the median proportion of community-based contacts across the sample (e.g., in a 10-chart sample, this would be the average of the 5th and 6th values when the percentage of contacts in the community are rank-ordered). Remember to use the most complete and up-to-date time period from the chart within a four-week (i.e., 28-day) calendar period. Ask the team leader, clinicians, or an administrative person for the most recent, but complete period of documentation.

ITEM RESPONSE CODING**Rating Guidelines**

Exclude charts with no contacts in that four-week period from the final tally. In scoring this item, only count face-to-face contacts with clients. Do not count phone calls and do not count contacts with collaterals or family members. Use chart review as the primary data source. Evaluator may judge whether select contacts should be included given the meaningfulness of contacts; e.g., a team leader documents a contact that appears to be an unplanned run-in at the agency, with no apparent purpose. If the information from different sources is inconsistent, ask the team leader to help you understand the discrepancy. If at least 75% of total service time occurs in the community, the item is coded as a "5."

For the current purpose of this rating, contacts in institutions (hospital, jails, assisted living facilities) will be treated as community contacts. However, this information may be used to guide qualitative feedback (e.g., a high percent of "community" based contacts that are in residential institutions may suggest a departure from the intent of ACT to focus efforts on helping people live and succeed in more integrated, community-based settings.

Exclude charts with no contacts in that four-week period from the final tally

Formula

Use the Chart Review Tally Sheet or TMACT Calculation Workbook to enter and compute these data.

	1	2	3	4	5
CP1. Community-Based Services	Less than 40% of face-to-face contacts in community.	40 - 54%	55 - 64%	65 - 74%	At least 75% of total face-to-face contacts in community.

CP2. Assertive Engagement Mechanisms

Definition: The team uses an array of techniques to engage difficult-to-treat clients. These techniques include the following:

- (1) Collaborative, motivational interventions to engage clients and build intrinsic motivation for receiving services from the team, and, where necessary; and
- (2) Therapeutic limit-setting interventions to create extrinsic motivation for receiving services deemed necessary to prevent harm to client or others.

When therapeutic limit-setting interventions are used, there is a focus on instilling autonomy as quickly as possible. In addition to being proficient in a range of engagement interventions, (3) the team has a thoughtful process for identifying the need for assertive engagement, measuring the effectiveness of chosen techniques, and modifying approach when indicated.

Rationale: Unlike some community-based programs, ACT clients are not discharged from the program due to failure to keep appointments or not participating in treatment, even if present. Retention of clients is a high priority for ACT teams. Persistent, caring attempts to engage clients in treatment helps foster a trusting relationship between the client and the ACT team. Therapeutic limit-setting interventions may be necessary during initial engagement if collaborative interventions fail and risks are too high. When used, therapeutic limit-setting interventions are eventually titrated down to more collaborative interventions to promote empowerment and autonomy.

DATA SOURCES (* Denotes primary data source)

Excel spreadsheet (columns R, S, T, and U)

Examine whether any clients have housing leases specifying that treatment participation is a condition of their housing. How many clients are on involuntary outpatient commitment and/or conditional release? How many clients have a representative payee? How many of those payeeships are held by the team/agency, and to what extent is money managed? How many clients have a guardian? Use this information, which primarily reflects potential therapeutic limit-setting, to guide interview questions below.

Team Leader Interview*

For this item, it is particularly useful to have reviewed charts and observed practice before interviewing staff about the use of assertive engagement. Interview questions listed below are a general guide to getting at some of the information needed to rate this item. However, interview questions are ideally directed by specific examples of clients noted to have received (or not, but clearly needed) assertive engagement practices. Therefore, we recommend readdressing this question with team leader, and other staff, near the end of the evaluation.

How does the team try to keep clients involved in ACT when it is clear that they need ACT services, but are either actively or passively refusing these services? [The focus of interview questions should remain on the team's work with clients who clearly needed ACT, but with whom the team has or had difficulty either physically accessing or interpersonally engaging. Do not focus on clients who are challenging to work with, but are electing to participate in services.]

Think of 2-3 clients [Or offer examples, as identified through the course of the evaluation] **who have been hard to engage in the past 6 months. Describe the team's engagement efforts with each of these clients.** [Engagement refers to the process of having access to a client to determine service needs and wants, and develop a relationship that will encourage service delivery. It includes clients who do not make themselves physically available for contacts, as well as those who are physically available, but unwilling to participate in meaningful service activities.]

What other techniques does the team use to reach out to clients? [Look for language that suggests motivational. It is important to give team leader an opportunity to offer a range of techniques.]

[If no therapeutic limit-setting techniques are offered on his or her own, consider following-up with:] **What is the team willing to try out when these more motivational and softer approaches are not working —the person remains poorly engaged and your concerns for safety and risks remain or our increasing? What then is the team willing to do to engage such clients to keep them in ACT services?**

[Cross-reference with responses to column S in the Excel spreadsheet regarding the number of clients on involuntary outpatient commitment or conditional release. Prompt if there are discrepancies.]

Do you have a method for identifying and tracking clients in a tenuous engagement phase —how is this done? What do you do with such information?

How do you identify clients in need of a different engagement tactic than the one the team has been using? [Attend to the extent to which the team has a reliable process in place that allows for timely modification of the assertive engagement strategy-e.g., changing up to a new motivational strategy when previous one is failing; moving from a motivational strategy to a more therapeutic limit-setting strategy when risks are increasing; moving from a therapeutic limit-setting to a less restrictive, more motivational approach to help preserve client autonomy.]

Clinician Interview

How has your team successfully and/or attempted to engage individuals who clearly needed ACT, but were not wanting ACT services?

What considerations did the team have when working with these clients? How has the team attempted to engage the client into services to better assure positive outcomes and reduce the chance of harmful effects of lack of treatment? What techniques does the team use to reach out to clients? Can you think of a person the team debated as to how to best engage them in service—and what ideas were put forth by the team?

[Look for language that suggests MI or therapeutic limit-setting techniques and follow-up with additional questions as needed. Try to anchor conversation in specific examples. It is important to give them an opportunity to offer a range of techniques.]

[If no therapeutic limit-setting techniques are offered on their own, consider following-up with:] ***What is the team willing to try out when these more motivational and softer approaches are not working —the person remains poorly engaged and your concerns for safety and risks remain or our increasing? What then is the team willing to do to engage such clients?***

Daily Team Meeting

Listen for clients reported on who appear to be difficult to engage. Does the team set aside time to plan for how to work with these clients, either very briefly during the meeting or by scheduling a follow-up meeting with other team members?

Does the team tend to automatically fall back on controlling methods (e.g., outpatient commitment, payee arrangements) in planning how to engage clients? Is there a spirit of creativity and planning around clients who appear to be disengaged?

ITEM RESPONSE CODING

Rating Guidelines

(1) Motivational interventions: A collaborative and non-confrontational approach is the hallmark of MI interventions used to engage clients. The aim is to enhance clients' intrinsic motivation for accessing services from the team. The focus of these interventions is figuring out what is important to the client, what it is that they need/want, and offer assistance in meeting those needs/wants. By getting a foot in the door, so to speak, the ACT team can then work on building rapport and using more MI interventions, such as acknowledging a client's ambivalence around receiving services and expressing empathy and developing discrepancy between a client's expressed goals and current behavior. As motivational interventions should seek to tap something individual about that client, they are often creative. For the sake of rating teams on this item, creative use of inducements (behavioral modification using a reward system) may qualify as a motivational intervention.

(2) Therapeutic limit-setting: Therapeutic limit-setting interventions are influencing tactics used to ensure that treatment needs are met in the least restrictive setting and while risk of harm to self or others is minimized. These interventions, which aim to create extrinsic motivation to access services, may limit or threaten to limit a client's self-determination in various life areas (e.g., interpersonal pressures may be used to increase medication adherence, access to money or housing may be leveraged against treatment participation, involuntary commitment to treatment may be sought if client meets local judicial criteria). When motivational interventions have not worked and/or safety concerns do not permit extensive trials of motivational interventions, therapeutic limit-setting interventions may need to be employed.

(3) Thoughtful application and withdrawal of engagement practices: The team has a process for detecting when they may need to try a different approach due to client's poor response to engagement tactics. This process may be most evident in the daily team meeting where services are tracked. One intent of this item is to determine *how* the team identifies *when* their engagement strategies are not effective and therefore in need of revision (e.g., if a team continues to attempt to meet with a client at his home for two weeks without success, at what point does the team revise their approach given the lack of success?). Credit for this practice is needed to rate a "5."

Use the team leader interview as the primary data source. Corroborate with observations made during the daily team meeting, chart reviews, and other identified data sources.

Refer to Table 22 below to determine if no, partial, or full credit is met for each criterion. If the team is skilled at employing motivational and collaborative interventions to engage clients, but uses therapeutic limit-setting interventions where necessary, AND is thoughtful about when to apply and withdraw these techniques, the item is coded as a "5."

Exclusive use of Motivational (Practice #1) or Therapeutic limit-setting (Practice #2) interventions (Rating of "2"). Teams that employ therapeutic limit-setting interventions with difficult-to-engage clients (meeting either Full or Partial criteria) with few clear and convincing examples of motivational interventions will likely leave the impression of a highly custodial, paternalistic, and/or coercive team. Although their practices are driven by concern for the client, they tend to heavily rely on strategies that force the client to accept services and prefer to avoid perceived risks that may accompany the use of motivational interventions. Alternatively, teams that employ only motivational interventions (Full or Partial criteria) with no to very few clear and convincing examples of therapeutic limit-setting strategies may leave the impression of a clinically negligent team. The team's concern for undermining client's autonomy and risking damage to the therapeutic relationship consistently overrides the decision to use leverages to help the client avoid further harm. Because teams who are exceptionally skillful in their use of motivational interventions (clear full credit for #1) also may have less need for therapeutic limit-setting; be sure to fully explore what the team is prepared to do in their use of therapeutic limit-setting (i.e., thereby rating higher on this item).

Table 22. Assertive Engagement Mechanisms

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Practice #1: motivational interventions	Motivational interventions are very rarely or not used to engage clients. Examples were few, lacking detail and/or creativity, and situations that would likely benefit from such interventions were observed in the data.	Team uses motivational interventions with the aim of engaging clients who need ACT services, but are passively or actively refusing services, in a limited manner. <u>One or two strategies or techniques</u> were provided (e.g., taking clients out to coffee or lunch, and changing up who saw the client}, and/or missed opportunities for such engagement were observed.	Team clearly uses an array of motivational interventions to work with clients who are difficult to engage. There are several robust examples reflecting collaborative and creative approaches to engage client in maintaining contact with the team to receive services. Examples must represent <u>more than two strategies or techniques and go beyond less creative efforts</u> , such as changing up staff who attempt to meet with the client. The following are some descriptive examples of motivational interventions used to engage clients: <ul style="list-style-type: none"> • persistent, patient efforts to meet with a paranoid and socially anxious woman who refused to speak face-to-face with staff. This included showing up at her apartment at regular times several days a week to offer services, such as running needed errands, and offering to take her out to a local knitting circle since she previously indicated that she liked to knit; • assisting a recently evicted man to find and move to a new residence, while using the increased contact time to discuss how his not taking medications may have created some of the problems leading to eviction; • to develop trust and assess for safety, bringing food to a recently enrolled woman who is staying at the shelter and continuing to prostitute for drugs.
Practice #2: therapeutic limit-setting	Therapeutic limit-setting interventions are very rarely or not used to engage clients. Examples were few, lacking detail and/or creativity, and situations that would likely benefit from such interventions were observed in the data.	Team uses therapeutic limit-setting with the aim of engaging clients who need ACT services, but are passively or actively refusing services, in a limited manner. <u>One or two strategies or techniques</u> (e.g., using representative payee role to leverage treatment participation} were provided, and/or missed opportunities for such engagement were observed. *Note: A team may be extremely adept at using more motivational interventions to engage clients and very rarely need to resort to therapeutic limit-setting, therefore	Team clearly uses an array of therapeutic limit-setting interventions to work with clients who are difficult to engage, or is willing to use an array of techniques if skillful at Practice #1. Evaluators observed robust examples of the team maximizing clients' extrinsic motivation to maintain contact with the team to receive services. Examples must represent <u>more than two strategies or techniques</u> . The following are some descriptive examples of therapeutic limit-setting interventions used to engage clients: <ul style="list-style-type: none"> • coordinating closely with a disengaged and decompensating client's representative payee to associate timing of more frequent disbursements with team contact for the purpose of increased contact; • working closely with a client's probation officer to arrange for a supervised living residence with stipulations around abstinence and medication adherence; • petitioning for involuntary inpatient commitment of a female client who, after months of living in a shelter and prostituting for drugs during an emerging manic episode, increasingly puts her

Table 22. Assertive Engagement Mechanisms

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
		having few examples to provide. Such a team may get full credit as long as data suggest that the team is willing and able to employ these more restrictive tactics, when needed.	safety at risk and is unresponsive to team's engagement efforts to offer to move to more stable housing-upon hospital discharge, team assisted in her moving into a temporary supervised apartment while she remained on a conditional release.
Practice #3: thoughtful application and withdrawal of engagement practices (Relevant for differentiating "4" and "5" ratings)	There is no clear and systematic process being used for tracking the need for and success of team's engagement efforts, ultimately steering team's engagement efforts. Teams who are negligent of this identification process and/or who are not proficient in engagement tactics, may have a higher drop out rate (see item OS10).	No partial credit option.	Team leader was able to clearly articulate a process for tracking the team's engagement efforts, such as by periodically reviewing the daily log and meeting as an ITT to review strategies, response, and plan for new engagement approaches. For example, team leader provided a specific example of how this process resulted in a modification of the team's approach to working with a woman residing in a shelter who was not responding to motivational interventions and required a more deliberate and forceful approach to ensure safety. *Note: A team's management of a "high-risk" or "watch-list" does not on its own earn full credit for this practice. Such a list must clearly be operational in guiding what the team is doing as it relates to assertive engagement.

	1	2	3	4	5
CP2. Assertive Engagement Mechanisms	Very little assertive engagement is evident (#1 and #2 are largely absent}.	Team primarily relies on #1 OR #2, not both (1 approach is FULLY or PARTIALLY used and 1 is not used at all (No Credit}}.	A more limited array of assertive engagement strategies is used (PARTIAL #1 and #2}.	Team uses #1 and #2 (at least 1 approach is FULLY used}. Thoughtful application/ withdrawal of engagement strategies is significantly lacking or absent (#3 is absent}.	Team is proficient in assertive engagement strategies, including thoughtful application/ withdrawal of engagement strategies, applying all 3 practices.

CP3. Intensity of Service

Definition: The team delivers a high amount of face-to-face service time as needed.

Rationale: To help clients with severe and persistent symptoms maintain and improve their functioning within the community, addressing a broad range of life goals and providing extensive therapeutic and rehabilitative interventions, a high service intensity is often required.

DATA SOURCES (* Denotes primary data source)

Chart Review* - Chart Review Log Part I (p. 195-196) and Chart Review Tally Sheet Part I (p.197-198)

Use the same charts as used for Item CP1. Calculate the mean amount of service hours per client, per week, over a month-long period. (If applicable, the charts should proportionately represent the number of clients who have "stepped down" in program intensity. Teams are queried whether they have their own scaling system used internally, which can guide random chart selection) From the mean values over a four-week period, determine the median number of service hours across the sample (e.g., in a one chart sample, this would be the average of the 5th and 6th values when the mean service hours per week are rank-ordered). Remember to use the most complete and up-to-date time period from the chart during a recent four-week (i.e., 28 day) time frame. Ask the team leader, clinicians, or an administrative person for the most recent, but complete period of documentation. See TMACT Part I for guidance in how to use a complete client population data from an electronic medical record query.

ITEM RESPONSE CODING**Rating Guidelines**

- In scoring this item, only count face-to-face contacts with clients. Do not count phone calls and do not count contacts with collaterals or family members.
- The evaluator may judge whether select contacts should be included at all in the chart tally given the quality of contacts (e.g., a team leader documents a contact that appears to be an unplanned run-in at the agency, with no apparent purpose).
- As this rating can be inflated by overuse of practices that deviate from more person-centered care (e.g., high use of office-based recreational groups), rate according to the data and consider providing qualitative feedback.
- Clients who receive extensive monitoring at the clinic because of a long-acting injection (e.g., Zyprexa Relprevv) should not be credited for the 180 minutes of monitoring time unless that time includes delivering of other services beyond passive and period monitoring. It is suggested that 60 minutes are credited when no other clear services are provided during this monitoring period.
- If the team does not separate out travel time (without client present) from service contact time, you should not rate this item, excluding it from the final TMACT ratings.

Use chart review as the primary data source. If the information from various sources is inconsistent, ask the team leader to help you understand the discrepancy.

Formula

Use the Chart Review Tally Sheet or TMACT Calculation Workbook to enter and compute these data.

	1	2	3	4	5
CP3. Intensity of Service	Average of less than 15 min/week or less of face-to-face contact per client.	15 - 49 minutes/week.	50 - 84 minutes/week.	85 - 119 minutes/week.	Average of 2 hours/week or more of face-to-face contact per client.

CP4. Frequency of Contact

Definition: The team delivers a high number of face-to-face service contacts, as needed.

Rationale: ACT clients require more intensive follow-up and ACT teams are to be the sole provider of a range of biopsychosocial services. ACT teams are highly invested and maintain frequent contact to provide ongoing, responsive support as needed. Frequent contacts are associated with improved client outcomes.

DATA SOURCES (* Denotes primary data source)

Chart Review* - Chart Review Log Part I (p. 195-196) and Chart Review Tally Sheet Part I (p.197-198)

Use the same charts as used for Item CP3. Calculate the mean number of face-to-face client-ACT service contacts, per week, over a month-long period. From the calculated mean values, determine the median number of service contacts across the sample (e.g., in a 10-chart sample, this would be the average of the 5th and 6th values when the mean service contacts per week are rank-ordered). Remember to use the most complete and up-to-date period during a recent 4-week time frame. Ask the team leader, clinicians, or an administrative person for the most recent and complete period of documentation.

Team Leader Interview

How many clients are scheduled to be seen four or more times a week?

What are some of the reasons for such high number of visits?

Who is seen least often, per the schedule?

[Further query for the number of clients who are scheduled to be seen less than once per week and the reasons for this level of care. This information can help provide context for what is observed in the chart review, especially as to the flexibility of services in general and the reason for the level of care provided. Such information may be used in qualitative feedback.]

ITEM RESPONSE CODING

Rating Guidelines

- Only count face-to-face contacts with clients. Do not count phone calls or contacts with collaterals or family members.
- If a client receives several consecutive contacts across staff, judge whether these contacts are meaningfully differentiated. If they are not, count a series of consecutive contacts in one day with multiple staff as one contact for that day.
- The evaluator may judge whether select contacts should be included at all in the chart tally given the quality of contacts (e.g., a team leader documents a contact that appears to be an unplanned run-in at the agency, with no apparent purpose).
- Attend to high frequency contacts that detract from person-centered, recovery-oriented services (e.g., clients receiving frequent contacts centered solely on medication and money management services). Although we do not recommend adjusting the rating and continuing to rate given the data, we do recommend providing qualitative feedback.

Use chart review as the primary data source. If the information from different sources is inconsistent, ask the team leader to help you understand the discrepancy.

Formula

Use the Chart Review Tally Sheet or TMACT Calculation Workbook to enter and compute these data.

	1	2	3	4	5
CP4. Frequency of Contact	Average of less than 0.5 face-to-face contact / week or fewer per client.	0.6 - 1.3 / week.	1.4 - 2.1 / week.	2.2 - 2.9 / week.	Average of 3 or more face-to-face contacts / week per client.

CP5. Frequency of Contact with Natural Supports

Definition: The team has access to clients' natural supports. These supports either already existed, and/or resulted from the team's efforts to help clients develop natural supports. Natural supports include people in the client's life who are NOT paid service providers (e.g., family, friends, landlord, employer, clergy).

Rationale: Developing and maintaining community support further enhances client's community integration and Many studies have found that other evidence-based practices are enhanced when the family and other natural supports are involved in treatment.

DATA SOURCES (* Denotes primary data source)

Excel spreadsheet (column X)*

Review for number of contacts with clients' natural supports.

Team Leader Interview

Refer to Excel spreadsheet (column X):

In looking at your team's contact with clients' natural supports, I just need to confirm that these do NOT include contacts with paid service providers (e.g., primary care physicians, parole officers, and employed payees). Some discretion may be used here, such as a primary care physician may be truly operating as a natural support to the client.

ITEM RESPONSE CODING**Rating Guidelines**

Use Excel spreadsheet as primary data source. Include **all contacts** (i.e., face-to-face, telephone, and email) with family, friends, landlord, and employer; exclude persons who are paid to provide assistance to the client, such as Social Security Disability or Department of Human Services representatives. Tabulate the percent of clients who the team reports at least once a month contact with natural support system. If the reported number is high (at least 76%), seek corroboration from other sources, including some evidence in chart documentation.

	1	2	3	4	5
CP5. Frequency of Contact with Natural Supports	For less than 25% of clients, the natural support system is contacted by team at least 1 time per month.	26% - 50%	51% - 75%	76% -89%	For at least 90% of clients, the natural support system is contacted by team at least 1 time per month.

CP6. Responsibility for Crisis Services

Definition: The team has 24-hour responsibility for directly responding to psychiatric crises, including meeting the following criteria: (1} The team is available to clients in crisis 24 hours a day, seven days a week; (2} The team is the first-line crisis evaluator and responder (if another crisis responder screens calls, there is very minimal triaging); (3} The team accesses practical, individualized crisis plans to help them address crises for each client; and (4} The team is able and willing to respond to crises in person, when needed.

Rationale: An immediate response can help minimize distress when persons with severe mental illness are faced with crisis. When the ACT team provides crisis intervention, which should be informed by previous crisis planning with ACT clients, continuity of care is maintained.

DATA SOURCES (* denotes primary data source)

Chart Review - Chart Review Log Part II (p. 197-198} and Chart Review Tally Sheet Part II (p.201-202}

A crisis plan is considered "practical" if it is individualized (i.e., reflecting the client's unique circumstances and preferences} and provides the necessary information to guide how to best respond to the client when they are in a crisis.

Team Leader Interview*

What is the ACT team's role in providing 24-hour crisis services?

How is the ACT team involved in crisis assessment and response during after-hours and on weekends?

Do calls come in directly to the on-call staff? [If not, clarify who receives calls and level of triaging, about what percent of calls are connected to the ACT on-call staff.]

In what ways does the on-call staff have access to crisis plans? Can you give an example of how crisis plans have been useful during a crisis?

Can you describe the most recent example where on-call staff responded to a crisis during after-hours and/or on weekends?

Client Interview	
<p><i>If you find yourself experiencing a crisis, what would you do and who would you reach out to?</i> [Prompt for whether they would access the team, specifically the crisis on-call-do they know the crisis hotline number?]</p> <p><i>What has been your experience with getting help from the team when you were in a crisis?</i> [Did the client find the team to be helpful and accessible?]</p> <p><i>Do you recall creating a plan with the team for how to best help you when you are experiencing a crisis?</i> [If yes:] <i>Do you feel like that plan has been helpful?</i></p>	
ITEM RESPONSE CODING	
Rating Guidelines	
<p>Refer to Table 23 to determine if no, partial, or full credit was met for each criterion. Of note, a team that shares responsibility for crisis services across other programs within the agency should be rated lower (e.g., criterion #1 is no credit as there are times non-ACT staff are the on-call; and criterion #2 is likely a no or partial credit as there are times when non-ACT staff are not directly receiving calls, if at all).</p>	

Table 23. Responsibility for Crisis Services			
Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
<p>Criterion #1: The team is available to clients in crisis 24 hours a day, seven days a week</p>	<p>The team is unavailable to clients in crisis at all times (i.e. the team maintains a more limited crisis on-call schedule, such as between four and midnight, or may share this responsibility across other agency programs leaving blocks of time with no ACT team staff as on-call}. The team may solely use a third party for receiving all crisis calls.</p>	<p>No partial credit option.</p>	<p>The team is available to clients in crisis at all times, 24 hours a day, seven days a week.</p>

<p>Criterion #2: The team is the first-line crisis evaluator and responder (if another crisis responder screens calls, there is very minimal triaging}</p>	<p>The team is not the first-line crisis evaluator and responder. A third party receives all calls and handles the majority of them.</p> <p>There may be some cases where the team intervenes, but that is more the exception.</p>	<p>A third party (whether internal or external to provider agency) receives all crisis calls and conducts assessment beyond identifying client as an ACT service recipient. The result is that while the ACT team does receive many crisis calls, some do not get patched through to the ACT crisis on-call during after-hours.</p>	<p>When a client calls the crisis line, they either immediately reach the ACT team or are promptly patched through to the ACT team with nearly no screening.</p> <p>Because the ACT team has more assessment and treatment information regarding each client and it is available at all times, it is critical that the team is primarily responsible for determining whether a situation is an actual emergency or not.</p>
<p>Criterion #3: The team accesses practical, individualized crisis plans⁸</p>	<p>Clients do not have practical crisis plans, OR clients do have practical crisis plans, but this information is not accessible to on-call staff person.</p>	<p>Crisis plans existed and were accessible to staff, but lacked the level of information needed to make them useful (e.g., crisis triggers or warning signs, effective coping mechanisms, less restrictive crisis respite options); OR Practical crisis plans existed, but:</p> <ul style="list-style-type: none"> • Were located in less than 65% of reviewed charts; AND • Crisis plan information was accessible to the on-call staff person. 	<p>Crisis plans:</p> <ul style="list-style-type: none"> • A practical crisis plan (e.g., reflected useful information to address crises for each client} was identified in at least 65% if the reviewed charts; AND • Crisis plan information was accessible to the on-call staff person. <p>*Note that WRAP, IMR, and psychiatric advance directives may lend to the development of practical crisis plans, which would count here.</p>
<p>Criterion #4: The team is able and willing to respond to crises in person, when needed</p>	<p>The team is unable or unwilling to respond to crises in person. No or very few examples are provided.</p>	<p>The team reports being willing to respond to a crisis call in person during after-hours, but with hesitation. The team provides some examples, but it appears that face-to-face contact is used as an absolute last resort.</p>	<p>In addition to the team responding to client crises via phone, the team assesses the need for whether an in-person contact is needed to either conduct further assessment to determine safety and need for hospitalization or address crisis. In such instances, depending on the situation, the team ideally has a protocol to assure that staff safety is also attended to when in-person response is needed.</p>

<p>CP6. Responsibility for Crisis Services</p>	1	2	3	4	5
	<p>Team has no responsibility for directly handling crises after-hours.</p>	<p>Team meets up to 2 criteria at least PARTIALLY OR criterion #1 is not met.</p>	<p>Team meets criterion #1 and at least PARTIALLY meets 2 to 3 criteria.</p>	<p>Team meets 3 criteria FULLY and 1 PARTIALLY.</p>	<p>Team FULLY meets all 4 criteria.</p>

⁸ Use the Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate the percentage of charts that include a practical crisis plan

CP7. Full Responsibility for Psychiatric Services

Definition: The team assumes responsibility for providing psychiatric services to clients, where there is little need for clients to have to access such services outside of the team. The psychiatric care provider assumes most of the responsibility for psychiatric services. However, the team's role in medication administration and monitoring are also considered in this assessment, especially when evaluating psychiatric services provided to clients residing in supervised settings where non-ACT staff also manage medications; the expectation is that ACT staff play an active role in monitoring medication management even when a client is in a residential setting.

CP8. Full Responsibility for Psychiatric Rehabilitation Services

Definition: These services focus on targeted skills training in the areas of community living, which includes skills needed to maintain independent living (e.g., shopping, cooking, cleaning, budgeting, and transportation) and socialization (e.g., enhancing social and/or romantic relationships, recreational and leisure pursuits that contribute to community integration). Psychiatric rehabilitation should address functional deficits, environment, as well as the lack of necessary resources, all of which are identified through the assessment process. As such, deliberate and consistent skills training which typically includes staff demonstration, client practice/role-plays, and staff feedback, as well as ongoing prompting and cueing for learned skills in more generalized settings. Psychiatric rehabilitation services reported here should be reflected across other data sources (e.g., progress notes, treatments plans, and weekly client schedules).

Rationale for CP7 and CP8: The ACT team is ideally equipped to provide quality services across a range of treatment domains so that clients with relevant needs are well-served and do not have to access these services externally. Creating a one-stop service team should theoretically eliminate communication problems and lead to a more seamless service system working to meet clients' goals. Clients should have the option to receive select services elsewhere, but it is expected that the percentage of clients doing so would be low given that the team is adequately providing the service themselves and meeting clients' needs. Team limitations (e.g., lack of staff to provide service, lack of skills, and lack of time) are not a good reason for clients receiving services externally. The Full Responsibility for Service items (CP7 - CP8) assess the percentage of clients who are receiving a needed service and the extent to which the ACT team is assuming responsibility for delivering this service.

DATA SOURCES (* denotes primary data source)

Data Source	CP7. Psychiatric Services	CP8. Psychiatric Rehabilitation Services
Excel spreadsheet*	columns C and D	columns J and L
Staff Interview*	Nurse	Clinician
Chart review*	Frequency of visits with ACT psychiatric care provider	Rate at which psychiatric rehabilitation services are documented in charts

Refer to other data sources to support service penetration estimates, such as other staff interviews and daily team meeting (e.g., services reported and planned for)

ITEM RESPONSE CODING: Scoring of items CP7 and CP8 is based on the percent of individuals with a given need who are receiving services in that particular service domain from the team. The following equation is calculated for each of the Full Responsibility for Service items (further direction in gathering data for the numerator and denominator will follow):

% of clients receiving service directly from team

% of clients needing and/or wanting service

(see base rates listed below)

Calculating the Numerator:

% of clients receiving service directly from team

To determine the numerator, only consider the number of clients receiving services directly from the team. Attend to the definition of the service, as provided to the team in the Excel spreadsheet, the number of clients reported by the team as receiving this service from the team, and other considerations and data sources.

Full Responsibility for Psychiatric Services (CP7) Excel spreadsheet Definition and Instructions:

The team assumes responsibility for providing psychiatric services to clients, where there is little need for clients to have to access such services outside of the team. Core psychiatric services include psychopharmacologic treatment and regular assessment of clients' symptoms & response to medications, including side effects, provided by the team's psychiatric care provider; and medication monitoring and supports provided by other ACT team members. The team's role in medication administration and monitoring are also considered in this assessment, especially when evaluating psychiatric services provided to clients residing in supervised settings where non-ACT staff also manage medications; the expectation is that ACT staff play an active role in monitoring medication management even when a client is in a residential setting.

Worksheet 1. Calculating the number of clients receiving psychiatric services (CP7) from the team (numerator).	Number/ Percent of clients	
	Team Hope example	Data Input
<p>A. How many clients were reported (Excel spreadsheet, column C) to be directly receiving psychiatric services from the team?</p> <ul style="list-style-type: none"> Engagement-related psychiatric services may also be counted (e.g., if a client is refusing medications, but provider continues to offer other services), but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Clients who are hospitalized and currently under the care of inpatient psychiatric providers can still count toward the numerator if ACT team psychiatric care provider is following client's care and in contact with hospital, and intends continuing treatment upon discharge. 	<p>(A) Team Reports: 98 clients, per example of Team Hope, are receiving psychiatric services from the team.</p>	
<ul style="list-style-type: none"> Be sure to only include clients seen by psychiatric care providers who met team inclusion criteria described in CT3 (if the caseload is shared across providers, clients may be counted if a qualifying psychiatric care provider is seeing these clients). Also include clients with contact with psychiatric residents, although the residents themselves are not qualified for CT3. <p>As an example, Team Hope is serving 100 clients and reported that 98 were receiving psychiatric care provider services from the team, which includes the 0.60 FTE psychiatrist who is considered part of the team, and the 0.20 FTE psychiatric resident, who is not considered part of the team. Two (2) clients are meeting with non-ACT psychiatrists.</p>		
<p>B. Number of clients who are living in residential settings who are <i>not</i> directly receiving medication monitoring from the team, or there is poor communication and collaboration between the residential facility and the team regarding medication monitoring, including missed medications, tolerance of side effects, and overall symptom reduction (Refer to column D, see responses from Nurse Interview below, which asks about staff role in</p>	<p>(B) 6 clients are in residences with on-site med monitoring and inadequate</p>	

<p>medication monitoring for those clients noted to be living in residential settings}.</p>	<p>coordination/ communication with team about meds.</p>	
<p>As an example, Team Hope reported in column D that 12 clients are in residential settings with medication monitoring services delivered by residential staff. Of those 12, 6 are in a group home where the team has inadequate communication with residential staff, per staff interviews.</p>		<p>(C) 15%</p>
<p>C. Approximate percent of all clients who are seen by the psychiatric care provider <u>less often than every 3 months</u>, per chart review. To determine this approximate percent:</p> <ul style="list-style-type: none"> • If less than 20% of clients had inadequate follow-up (seen less often than 3 months} AND at least 30% were seen within six weeks, do not make adjustments using Step C. • For those client charts where the team was reported to provide psychiatric care services (column C) <u>and who had not been excluded from the count per Steps A and B above</u>, compute the percent of client charts with inadequate follow-up by psychiatric care provider. "Inadequate follow-up" includes those client charts observed with 3+ months between contacts, which includes most recent contact. • Evaluator discretion is an option when it comes to counting a client not seen within 3+ months against the provider. In example, clients not seen often with a rationale consistent with best practice (e.g., a client who has been in jail for the previous 4 months, but has been having contact with other team members; two clients who were not seen within 3 months, but had many attempts in the interim, while remaining clients reviewed seen within 6 weeks}. 		
<p>As an example, 20 charts from Team Hope were reviewed and 5 charts were of clients not seen within 3 months, but reported to be receiving psychiatric care from the team (column C). One of these 5 charts was for a client deducted per Step B above due to residential living with little team oversight. Thus, 4 of 20 charts, or 20%, is calculated to approximate inadequate follow-up. However, in review of overall practice, at least two charts had documented attempts by psychiatric provider to see these clients more often. Evaluators adjusted the percent likely receiving inadequate follow-up to 15%.</p>		
<p>Total number of clients receiving service (numerator): The final calculation for the numerator is as follows with Team Hope example to follow: [(Step A – ((Step A – Step B) * Step C))/current caseload] * 100 (this is the final step to translate into a percentage).</p>	<p>Estimated percent of clients receiving psychiatric services from the team (numerator): 78%</p>	
<p>For Team Hope, this is $\frac{[(98 - ((98 - 6) * 0.15)]}{\text{current caseload (100)}} * 100$ $\frac{[(98 - (92 * 0.15)]}{100} * 100$ $\frac{[(98 - 13.8)]}{100} * 100 = \frac{[78.2]}{100} * 100 = 0.78 * 100 = \mathbf{78\%}.$ Refer to Table 24 for further guidelines on making adjustments.</p>		

Nursing Interview

If the team reports that clients are receiving medication monitoring from non-ACT providers (column D), ask the following: ***Tell me about what happens when clients receive medication monitoring from other providers. How does the team work with these providers— this includes residential staff? If a client wasn't tolerating a particular medication or missed their medication, how would you know?*** [Go through each client noted to be living in residential setting with medication monitoring (column D). If team plays minimal role in medication management oversight for clients in residential setting, do not count these clients toward the numerator value, regardless of the ACT team's psychiatric care provider prescribes the medications for these clients.]

**Full Responsibility for Psychiatric Rehabilitation Services (CP8)
Excel spreadsheet Definition and Instructions:**

These services focus on targeted skills training in the areas of community living, which includes skills needed to maintain independent living (e.g., shopping, cooking, cleaning, budgeting, and transportation) and socialization (e.g., enhancing social and/or romantic relationships, recreational and leisure pursuits that contribute to community integration). Psychiatric rehabilitation should address functional deficits as well as the lack of necessary resources, all of which are identified through the assessment process. As such, deliberate and consistent skills training which typically includes staff demonstration, client practice/role-plays, and staff feedback, as well as ongoing prompting and cueing for learned skills in more generalized settings. Psychiatric rehabilitation services reported here should be reflected across other data sources (e.g., progress notes, treatments plans, and weekly client schedules).

To compute the rate at which psychiatric rehabilitation services are provided by the team, first start by examining the rate at which the team reports to be delivering this service themselves (column J). If there is a clear discrepancy between what the team reports and what is observed in the chart data, evaluators are encouraged to adjust the reported percent given the weight of other data sources. We offer two methods below for comparing data sources and determining the most accurate estimate of actual performance. The first method (**Method 1 in Worksheet 2**) compares the team's report with all sampled charts (regardless if those individual charts were of clients to whom the team reported delivering the service); Method 1 can detect potential underreporting by the team in column J, but may be more likely to produce incorrect estimates if the sample is not representative of all clients reported to receive that service. The second method (**Method 2 in Worksheet 3**) examines the presence of psychiatric rehabilitation services only for those clients the team reported affirmatively in column J; Method 2 may be more accurate when the team reported a low penetration rate to begin with (e.g., the team reported less than 20% of clients as receiving the service), as the odds of sampling a representative sample may be compromised, or generally if sample is not representative of what the team reported in service delivery. Method 2 may be more likely to produce incorrect estimates if the timespan of chart review dates considerably predates the time of when the team completed the Excel spreadsheet.

Worksheet 2. Method 1. Calculating the number of clients receiving psychiatric rehabilitation services (CP8) from the team (numerator).	Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving psychiatric rehabilitation from the team? (Excel spreadsheet, column J). Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served (or listed in Excel if there is a discrepancy).</p> <ul style="list-style-type: none"> Engagement-related rehabilitation services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 	<p>Team Reports: (A) 82% are receiving psych rehab services from the team</p>	
<p>Team Hope example. The team reported that 82 of the 100 clients (82%) were receiving psychiatric rehabilitation services from the team.</p>		
<p>B. What percent of all charts reviewed were observed to have any psychiatric rehabilitation service at all (i.e., regardless of it being systematically provided and regardless of quality judged as high or low)? Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B) 60% found any evidence of psych rehab services</p>	
<p>The results of Team Hope's Chart Review found that 12 of 20 (60%) charts were judged to provide some psychiatric rehabilitation, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of psychiatric rehabilitation? (This information may inform how much of an adjustment to make to team's report if there is a discrepancy between their report and chart observation.)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of psychiatric rehabilitation (i.e., # of those judged high quality / # judged to have some psychiatric rehab service). Calculate the percent of charts observed with "systematic delivery" of psychiatric rehabilitation (i.e., # of those judged systematic / # judged to have some psychiatric rehab service). Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned psychiatric rehabilitation interventions in person-centered plans and/or client schedules, whether and how clients are using clubhouses and drop-in centers (column L). 	<p>Other Data: (C) 50% "high quality;" 75% "systematic;" and other examples judged to be moderate</p>	
<p>The results of Team Hope's Chart Review found that 6 of 12 charts (50%) were judged to be of "high quality," and that 9 of 12 (75%) were systematically delivered. Although planning was lacking in specified interventions and there was limited notation of planned psychiatric rehab interventions in client schedules, several good examples were provided by interviewed staff. Only three clients were accessing local club house or drop-in centers, with no evidence to suggest this was in lieu of the team not providing psychiatric rehabilitation.</p>		
<p>Calculating percent of clients receiving service (numerator):</p> <p>Compare Steps A (Team Report) with B (Chart Review). If there's a significant discrepancy (e.g., a difference of 20 percentage points or more) between these two estimates, adjust from the team's report (A) in the direction of data observed (B; chart data). The extent of this adjustment depends on other data sources (see Step C). We</p>		

recommend using either thirds or quarters to adjust team's reported percent (e.g., a discrepancy of 30 points could be divided in thirds (10, 20, 30), and how many "thirds" used to adjust would depend on other data sources (see Step C); clear "moderate" findings may suggest cutting the difference in half. Also, refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.

Other Tips:

- If team reports that all/nearly all clients are receiving the service, then consider adjusting closer to chart review data as the sample would be representative of reported practice (i.e., by default, it reflects Method 2 described below).
- If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data.
- Regardless if using Method 1 or 2 to calculate percent receiving psychiatric rehabilitation services, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being a highly directive nature to how psychiatric rehabilitation services were being delivered}, consider rating a "1" for this item.

As an example, there was a discrepancy of 22 percentage points between what **Team Hope** reported (82%) and what was observed in the charts (60%), with other data sources overall suggesting a moderate level of practice. Evaluators chose to cut the difference in half, dividing 22 in half ($22/2 = 11$) and reducing the team's report by 11 percentage points ($82-11 = 71\%$).

Worksheet 3. Method 2. Calculating the percent of clients receiving psychiatric rehabilitation services (CP8) from the team (numerator).	Percent of Clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving psychiatric rehabilitation from the team? (Excel spreadsheet, column J). Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p> <ul style="list-style-type: none"> Engagement-related rehabilitation services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 	<p>Team Reports: (A) 82% are receiving psych rehab services from team</p>	
<p>Team Hope example. The team reported that 82 of the 100 clients (82%) were receiving psychiatric rehabilitation services from the team.</p>		
<p>B. What percent of those indicated as receiving psychiatric rehabilitation services from the team (Excel spreadsheet, column J) were found to receiving such services, per the chart review? Refer to the Chart Review Tally Sheet Part I (Refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results (B): 71% of charts found any psych rehab service</p>	
<p>Team Hope example: In the sample of 20 charts reviewed, 17 clients were reported to be receiving psychiatric rehabilitation from the team, per the Excel spreadsheet (column J). The results of Team Hope's Chart Review found that 12 of 17 (71%) charts were judged to provide some psychiatric rehabilitation, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of psychiatric rehabilitation? (this information may inform how much of an adjustment to make to team's report)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of psych rehab (i.e., # of those judged high quality / # judged to have some psychiatric rehab service). Calculate the percent of charts observed with "systematic delivery" of psych rehabilitation (i.e., # of those judged systematic / # judged to have some psych rehab service). Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned psychiatric rehabilitation interventions in person-centered plans and/or client schedules, whether and how clients are using clubhouses and drop-in centers (column L). 	<p>Other Data: (C) 50% "high quality;" 75% "systematic;" and other examples judged to be moderate</p>	
<p>Team Hope's Chart Review found that 6 of 12 charts (50%) were judged to be of "high quality," and that 9 of 12 (75%) were systematically delivered. Although planning was lacking in specified interventions and there was limited notation of planned psychiatric rehab interventions in client schedules, several good examples were provided by interviewed staff. Only two clients were accessing local club house or drop-in centers, and it was not clear it was in lieu of the team not providing psychiatric rehabilitation.</p>		
<p>Calculating percent of clients receiving service (numerator): If the percent found in Step B was at least 90%, then we recommend using the percent the team reported in Step A as the numerator. If the percent found in Step B is lower than 90%, consider adjusting the team's report using these guidelines:</p> <p>If other data sources are moderate to high (Step C), then you will apply the percent found in Step B following these rules:</p> <ul style="list-style-type: none"> Take the percent found in Step B and add 10 to it (e.g., 71% + 10 = 81%) 		

Why add 10? As we are generalizing the findings from the sample to the total caseload, adding 10 helps reduce potential error if the sample underrepresented the work of the team. When other data sources are generally favorable (Step C), we are more inclined to add in this margin of potential error.

- Apply this percent to what the team reported in Step A. For example, 81% is applied to the team's original report of 82%, which is $0.81 \times 0.82 = 0.66$ (X 100) = 66%

If other data sources are low to moderate (Step C), then you will apply the percent found in Step B following these rules:

- Take the percent found in Step B and apply this percent to what the team reported in Step A. For example, 71% is applied to the team's original report of 82%, which is $0.71 \times 0.82 = 0.58$ (X 100) = 58%.
- If other data sources (Step C) indicate a lower quality overall, the evaluators have discretion to reduce the percentage in Step B down by 10. As an example, if Step C was judged to be overall low (very few to no examples judged high quality, nearly none systematic, and weak to generic examples provided), then the 71% may be reduced to 61%. The final adjustment then would be $0.61 \times 0.82 = 0.50$, or 50%.

Refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.

Other Tips:

- If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data.
- If there is reason to believe the team underreported their services, consider relying more on Method 1 process.

Regardless if using Method 1 or 2 to calculate percent receiving psychiatric rehabilitation services, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being a highly directive nature to how psychiatric rehabilitation services were being delivered}, consider rating a "1" for this item.

For **Team Hope**, 71% of the subsample were found to have documented psychiatric rehabilitation (which is lower than 90% to stay with what team reported in Step A). Other data sources (Step C) were favorable. Evaluators therefore made an adjustment up from 71% to 81%, and applied the 81% to the reported 82% (Step A), resulting an adjusted rate of 66%.

Estimated percent of those receiving psychiatric services from the team
(Numerator):
66%

Clinician Interview

Does the team use a tool or instrument to assess clients' ADL or "functional" skills? [If yes:] Can you tell me more about who completes it and how the information is used?

Let's take a look at the Excel spreadsheet and the number of clients who directly receive psychiatric rehabilitation services from the team. Tell me more about what these services include. [Randomly select clients noted as receiving psychiatric rehabilitation services and inquire about what those interventions are, and whether they are likely reflected in the treatment plans; keep in mind the clearly stated definition provided to the team on what counts as rehabilitation interventions. *Note that clients attending clubhouses, drop-in centers, or day treatment programming should also be closely examined when assessing the extent of rehabilitation services offered by the team.]

If we have not yet heard of it yet, can you share with us an example of your or your team's practice that you think best reflects your team's work in providing psychiatric rehabilitation—where there is a focus on functional skill-building? [With this example, try to clarify how far back the example dates.]

Calculating the Denominator:

**% of clients needing and/or wanting service
(see base rates listed below)**

To determine the denominator (i.e., those needing/wanting the service), we refer to standardized base rates that are thought to reflect the percentage of ACT clients who would want psychiatric and rehabilitative services, as well as those who may not expressed that they want, but appear to need these services, such as those who would benefit from further engagement in that particular service domain. It is assumed that all ACT clients will need/want psychiatric and rehabilitative services, but a slightly more conservative estimate of 90% is used to calculate need/want to allow for client choice and measurement error.

We estimate **at least 90%** of ACT clients will need/want the following services:

- Psychiatric services
- Psychiatric rehabilitation services

Service	Numerator (Method 1)	Numerator (Method 2)	Denominator	Final Calculation (Method 1)	Final Calculation (Method 2)
CP7. Psychiatric services	78%	n/a	90%	87%	n/a
CP8. Psychiatric rehabilitation services	71%	66%	90%	79%	73%

Table 24. A Description of Observed Data Given Actual Service Penetration: A Reference Guide for Evaluators.

Service penetration level	Considering the Evidence
<p>High (75 – 100%) Rating 4 or 5</p>	<p>For a team that provides a high level of service penetration, evidence will be observed across most or all data sources. Of the approximate number of clients expected to want/need that particular service (e.g., 90% of total caseload for psychiatric rehabilitation services), at least 75% of reviewed sampled charts (see Chart Review Tally Sheet - Part I) will have service of interest documented in the progress notes. Service will be commented on during the observation of daily team meeting (i.e., reported contacts involving rehabilitative services, and scheduled contacts to address client's rehabilitation needs}. For psychiatric rehabilitation services, a relatively large breadth of rehabilitation services is provided (e.g., social and communication skills training, household management, hygiene skills, safety skills, transportation and navigation skills, and money management}. Likewise, it is expected that functional assessments are conducted to help determine impairments. There will be few or no clients participating in other non-ACT psychosocial programs (e.g., clubhouse, day treatment programming}. The specification of rehabilitative interventions will likely be very precise and descriptive for a team that has fully embraced this practice.</p>
<p>Moderate (50%) Rating 2 or 3</p>	<p>For a team that provides a moderate level of service penetration, evidence will be observed across several data sources. Of the approximate number of clients expected to want/need that particular service (e.g., 90% of total caseload for psychiatric rehabilitation services), between 40 and 60% of reviewed sampled charts (see Chart Review Tally Sheet - Part I) will have service of interest documented in the progress notes. Service will be commented on during the observation of daily team meeting (i.e., reported contacts involving rehabilitative services, and scheduled contacts to address client's rehabilitation needs}, and interview data. The breadth of rehabilitative services provided may be more limited, reflecting a less systematic implementation of psychiatric rehabilitation; functional assessments may not be conducted (i.e., rehabilitation interventions are provided with little systematic assessment of the type and extent of functioning impairment, and related cognitive and psychiatric impairments limiting client's functioning}.</p>
<p>Low (20% or less) Rating 1</p>	<p>For a team that provides a low level of service penetration, evidence will be observed across very few data sources—e.g., chart review (no or very few charts have notes that make mention of rehabilitative services}, observation of daily team meeting (i.e., no mention of rehabilitative services}, and interviews. Rehabilitation services, when observed, lack breadth (e.g., the team mentions assisting a few clients with ADL, such as housekeeping and maintenance}. Activities are not systematically delivered or follow from a plan (per the definition provided in Excel spreadsheet}.</p>

*Note that these heuristic guidelines are intended to provide examples of observed evidence at three distinct levels of service penetration (high, moderate, and low}. For teams providing more intermediate levels (moderate-high or low-moderate}, evaluators should take into consideration the overall weight of the evidence, considering the three levels provided here. Data on service penetration summarized in Chart Tally II should be used to support, or adjust (upwards or downwards}, the team's reported penetration rate, considering the number of clients assumed to want/need that service; refer to appropriate Worksheet that is included in these rating guidelines.

Example: Calculating Full Responsibility Rates for Psychiatric Services and Psychiatric Rehabilitation Services.		
	CP7. Full Responsibility for Psychiatric Services	CP8. Full Responsibility for Psychiatric Rehabilitation Services
Numerator Calculation		
	<p>Team reports on the Excel spreadsheet (column C) that all but 2 of the 88 clients are receiving psychiatric services from the team; two continue to work with a psychiatrist they were with prior to the team. Evaluators considered the 10 clients noted as residing in a supervised setting where medication monitoring is provided (column D of Excel spreadsheet). Information gathered from interviews confirmed that the team plays an active role in coordinating medication monitoring with residential staff (had evidence indicated that the team is relatively unaware of clients' response to medications and adherence with medications, then those clients would be excluded from the count). Evaluators conclude that 86 of the 88 (98%) clients are <u>receiving</u> psychiatric care services from team.</p>	<p>Team reports on Excel spreadsheet (column J) that all 75 of 90 (83%) clients they serve are receiving psychiatric rehabilitation services from team. Of the 18 charts reviewed, evaluators found that a total of 9 (50%) had any notation of psychiatric rehabilitation interventions, with 6 of these rated as "high quality" and 5 (28% of all charts) noted as being systematically delivered. Clinician examples provided were judged to be of high quality, overall. The team is not conducting functional assessments. Using <u>Method 1</u> (see Worksheet 2), evaluators moderately reduced the 33 percentage point discrepancy (83% reported—50% observed in charts) by 11 (i.e., cutting in thirds) to produce an adjusted percent of 72% (i.e., 83 - 11) of those served are receiving psychiatric rehabilitation from the team.</p>
Denominator Calculation		
The base rate of 90% is used to calculate the denominator for both CP7 and CP8.		
Formula and Rating	<p>To determine the percentage of clients who were receiving psychiatric services from the team of those who likely needed such services, evaluators calculated the following: 98% clients estimated receiving / 90% estimated to need or want psychiatric services = 109%, which rates a "5" on CP7.</p>	<p>To determine the percentage of clients who were receiving rehabilitative services from the team of those who likely needed such services, evaluators calculated the following: 72% clients estimated receiving / 90% estimated to need or want rehabilitative services = 80%, which rates a "4" on CP8.</p>

	1	2	3	4	5
CP7 Full Responsibility for Psychiatric Services	Less than 20% of clients in need of psychiatric services are receiving them from the team.	20 - 49% of clients in need of psychiatric services are receiving them from the team.	50 - 74% of clients in need of psychiatric services are receiving them from the team.	75 - 89% of clients in need of psychiatric services are receiving them from the team.	90% or more of clients in need of psychiatric services are receiving them from the team.
CP8 Full Responsibility for Psychiatric Rehabilitation Services	Less than 20% of clients in need of psychiatric rehabilitation services are receiving them from the team.	20 - 49% of clients in need of psychiatric rehabilitation services are receiving them from the team.	50 - 74% of clients in need of psychiatric rehabilitation services are receiving them from the team.	75 - 89% of clients in need of psychiatric rehabilitation services are receiving them from the team.	90% or more of clients in need of psychiatric rehabilitation services are receiving them from the team.

EP1. Full Responsibility for Integrated Treatment for Co-Occurring Disorders (COD)

Definition: The team assumes responsibility for providing integrated treatment for co-occurring disorders (COD) services within the larger framework of integrated treatment for COD, where there is little need for clients to have to access such services outside of the team. Core services include systematic and integrated screening and assessment and interventions tailored to those in early stages of change readiness (e.g., outreach, motivational interviewing) and later stages of change readiness (e.g., CBT, relapse prevention). It is expected that the ACT COD specialist will assume the majority of responsibility for delivering integrated treatment for co-occurring disorders, but ideally other team members also provide some integrated treatment for co-occurring disorders services. Integrated treatment for co-occurring disorders reported here from the Excel spreadsheet should be reflected across other data sources (e.g., progress notes, treatment plans).

EP2. Full Responsibility for Employment and Educational (EE) Services

Definition: The team assumes responsibility for providing employment and educational (EE) services to clients, where there is little need for clients to have to access such services outside of the team. Core services include engagement, vocational assessment, job development, job placement (including going back to school, classes), and job coaching & follow-along supports (including supports in academic/school settings). It is expected that the ACT Employment Specialist will assume the majority of responsibility for delivering EE services, but ideally other team members also provide some EE services. Employment and educational services reported here from the Excel spreadsheet should be reflected across other data sources (e.g., progress notes, treatment plans).

EP3. Full Responsibility for Wellness Management and Recovery (WMR) Services

Definition: The team assumes responsibility for providing wellness management and recovery (WMR) services to clients, where there is little need for clients to have to access such services outside of the team. These services include a formal and/or manualized approach to working with clients to build and apply skills related to their recovery. Examples of such services include the development of Wellness Recovery Action Plans (WRAP) and provision of the Illness Management and Recovery (IMR) curriculum. WMR services reported here from the Excel spreadsheet should be reflected across other data sources (e.g., progress notes, treatment plans).

Rationale for EP1, EP2, EP3: The ACT team is ideally equipped to provide quality services across a range of service domains so that clients with relevant needs are well-served and do not have to access these services externally. Creating a one-stop service team should theoretically eliminate communication problems and lead to a more seamless service system working to meet clients' goals. Clients should have the option to receive services elsewhere, but it is expected that the percentage of clients doing so would be low given that the team is adequately providing the service themselves and meeting clients' needs. Team limitations (e.g., lack of staff to provide service, lack of skills, and lack of time) are not a good reason for clients receiving services externally.

The Full Responsibility for Service items assess the percentage of clients who are receiving a needed service and the extent to which the ACT team is assuming responsibility for delivering this service.

Data Sources (* denotes primary data source)

Data Source	EP1. Integrated Treatment for COD	EP2. EE services	EP3. WMR Services
Excel spreadsheet*	columns A and B	columns E, F, and L	column K
Staff interview*	Co-Occurring Disorders Specialist	Employment Specialist	Peer Specialist and Clinician
Chart Data*	Rate at which Integrated Treatment of COD services are documented in charts	Rate at which EE services are documented in charts	Rate at which WMR services are documented in charts

Refer to other data sources to support service penetration estimates, such as other staff interviews, chart review, daily team meeting (e.g., services reported and planned for).*

ITEM RESPONSE CODING: Scoring of items EP1—EP3 is based on the percentage of individuals with a given need who are receiving adequate services in that particular service domain from the team. Thus, the following equation is calculated for each of the Full Responsibility for Service items (further direction in gathering data for the numerator and denominator will follow):

$$\frac{\text{\% of clients receiving service directly from team}}{\text{\% of clients needing and/or wanting service (see base rates listed below)}}$$

Calculating the Numerator:

$$\frac{\text{\% of clients receiving service directly from team}}{\text{\% of clients receiving service directly from team}}$$

For the purpose of determining the numerator, only consider the number of clients receiving services directly from the team. Attend to the definition of the service, as provided to the team in the Excel spreadsheet, the number of clients reported by the team as receiving this service from the team, and other considerations and data sources.

To compute the rate at which the service of interest is provided by the team, first start by examining the rate at which the team reports to be delivering this service themselves (Excel spreadsheet). If there is a clear discrepancy between what the team reports and what is observed in the chart data, evaluators are encouraged to adjust the reported percent given the weight of other data sources. We offer two methods below for comparing data sources and determining the most accurate estimate of actual performance. The first method (**Method 1 in Worksheet 2**) compares the team's report with all sampled charts (regardless if those individual charts were of clients the team reported delivering the service to); Method 1 can detect potential underreporting by the team in Excel spreadsheet, but may be more likely to produce incorrect estimates if the sample is not representative of all clients reported to receive that service. The second method (**Method 2 in Worksheet 3**) examines the presence of this service only for those clients the team reported affirmatively in Excel spreadsheet; Method 2 may be more accurate when the team reported a low penetration rate to begin with (e.g., the team reported less than 20% of clients as receiving the service), as the odds of sampling a representative sample may be compromised, or generally if sample is not representative of what the team reported in service delivery. Method 2 may be more likely to produce incorrect estimates if the timespan of chart review dates considerably predates the time of when the team completed the Excel spreadsheet.

Which Method to Use?

Evaluators are encouraged to compute estimated service penetration rates using both methods 1 and 2. It is common that both result in the same rating. There are times where they could result in different ratings, as is the case for both EP2. SEE and EP3. WMR services above. In such cases, the next step is to round back to "Other data" to re-review the overall weight of the information and how it impacted decisions in how much to adjust the team's reported service penetration rate (and refer to Table 25 below). Another step is to consider the impact of a non-representative sample (Method 2 is often then more accurate).

Full Responsibility for Integrated Treatment for Co-Occurring Disorders (EP1) Excel spreadsheet Definition and Instructions: *These include services provided by the COD specialist as well as other team members well-versed in integrated, stage-wise treatment for COD. Core services include: (1) systematic and integrated screening and assessment and interventions tailored to those in (2) strategies to assist those in early stages of change readiness (e.g., outreach, MI) and (3) and strategies to assist those in later stages of change readiness (e.g., MI, CBT, relapse prevention). Integrated treatment for co-occurring disorder services reported here should be reflected across other data sources (e.g., progress notes, treatments plans, client schedules). NOTE: To be considered a group participant, client attends group at least one time per month. To be counted as an individual integrated treatment for COD participant, the duration and frequency of therapy sessions should be at least 20 minutes per week. Be sure to also include clients whom the team is attempting to actively engage; these attempts should be documented in the client's chart.*

Worksheet 4. Method 1 Calculating the number of clients receiving integrated treatment for COD (EP1) from the team (numerator).	Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving integrated treatment for co-occurring disorders (COD) from the team (Excel spreadsheet, column B)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p> <ul style="list-style-type: none"> Engagement-related services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. If client noted as also receiving services from a non-ACT provider (see column B), selectively exclude from this count those clients who, after follow-up questioning to team leader or other staff, are accessing these non-ACT services in lieu of team's emphasis of integrated treatment for COD (however, <u>exclude</u> complimentary programs, such as detoxification, residential integrated treatment for COD, and self-help groups}. 	<p>Team Reports: (A) 42%</p>	
<p>Team Hope example. The team reported that 42 of the 100 clients (42%) were receiving integrated treatment for COD from the team.</p>		
<p>B. What percent of all charts reviewed were observed to have any integrated treatment for COD at all (i.e., regardless of it being systematically provided and regardless of quality was judged high or low)? Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B) 25%</p>	
<p>The results of Team Hope's Chart Review found that 5 of 20 (25%) charts were judged to provide some integrated treatment for COD, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of integrated treatment for COD? (this information may inform how much of an adjustment to make to team's report)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of integrated treatment for COD (i.e., # of those judged high quality / # judged to have some integrated treatment for COD}. Calculate the percent of charts observed with "systematic delivery" of integrated treatment for COD (i.e., # of those judged systematic / # judged to have some integrated treatment for COD}. 	<p>Other Data: (C) 20% "high quality;" 40% "systematic;" and other examples judged to be weak</p>	

<ul style="list-style-type: none"> Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned integrated treatment for COD interventions in person-centered plans and/or client schedules, and reliance on other non-ACT COD services. 		
<p>The results of Team Hope's Chart Review found that 1 of 5 charts (20%) were judged to be of "high quality," and that 2 of 5 (40%) were systematically delivered. There was limited notation of planned integrated treatment for COD interventions in client schedules, and examples tend to be vague and somewhat mixed in regard to reflecting appropriate stage-wise treatment.</p>		
<p>Calculating percent of clients receiving service (numerator): Compare Steps A with B. If there is a significant discrepancy (e.g., a difference of 15 percentage points or more) between these two estimates, adjust from their original reported penetration in the direction of data observed in Step B (chart data). The extent of this adjustment depends on other data sources (see Step C). We recommend using either thirds or quarters to adjust team's reported percent (e.g., a discrepancy of 30 points could be divided in thirds (10, 20, 30), and how many "thirds" used to adjust would depend on other data sources (see Step C)); clear "moderate" findings may suggest cutting the difference in half. Also, refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.</p> <p><u>Other Tips:</u></p> <ul style="list-style-type: none"> If team reports that all/nearly all clients are receiving the service, then consider adjusting closer to chart review data as the sample would be representative of reported practice (i.e., by default, it reflects Method 2 described below). If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data. Regardless if using Method 1 or 2 to calculate percent receiving integrated treatment for COD services, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being a high use of confrontational, active treatment only services), consider rating a "1" for this item. 	<p>Estimated percent of those receiving integrated treatment for COD from the team (Numerator): 31%</p>	
<p>As an example, there was a discrepancy of 17 percentage points between what Team Hope reported (42%) and what was observed in the charts (25%), with other data sources overall suggesting a lower level of practice. Given what was observed in Step C, evaluators chose to cut the difference in thirds, dividing 17 by 3 ($17/3 = 5.7$) and reducing the team's report by two-thirds the difference (i.e., 11.4 percentage points ($42 - 11.4 = 30.6\%$, or 31%).</p>		

Worksheet 5. Method 2. Calculating the percent of clients receiving integrated treatment for COD (EP1) from the team (numerator).	Number or Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving integrated treatment for COD from the team (Excel spreadsheet, column B)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p> <ul style="list-style-type: none"> Engagement-related integrated treatment for COD services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. If client noted as also receiving services from a non-ACT provider (see column B), selectively exclude from this count those clients who, after follow-up questioning to team leader or other staff, are accessing these non-ACT services in lieu of team's emphasis of integrated treatment for COD (however, <u>exclude</u> complimentary programs, such as detoxification, residential integrated treatment for COD, and self-help groups). Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 	<p>Team Reports: (A) 42%</p>	
<p>Team Hope example. The team reported that 42 of the 100 clients (42%) were receiving integrated treatment for COD services from the team.</p>		
<p>B. What percent of those indicated as receiving integrated treatment for COD from the team (Excel spreadsheet, column B) were found to receiving such services, per the chart review? Refer to the Chart Review Tally Sheet Part I (Refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B) 63%</p>	
<p>Team Hope example: In the sample of 20 charts reviewed, 8 charts (40%) were of clients to whom the team had reported to be providing integrated treatment for COD services. The results of Team Hope's chart review found that 5 of 8 (63%) charts were judged to provide some integrated treatment for COD services, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of integrated treatment for COD? (This information may inform how much of an adjustment to make to team's report.)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of integrated treatment for COD (i.e., # of those judged high quality / # judged to have some integrated treatment for COD). Calculate the percent of charts observed with "systematic delivery" of integrated treatment for COD (i.e., # of those judged systematic / # judged to have some integrated treatment for COD). Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned integrated treatment for COD interventions in person-centered plans and/or client schedules, and reliance on other non-ACT COD services. 	<p>Other Data: (C) 20% "high quality;" 40% "systematic;" and other examples judged to be weak</p>	
<p>Team Hope's chart review found that 1 of 5 charts (20%) were judged to be of "high quality," and that 2 of 5 (40%) were systematically delivered. There was limited notation of planned integrated treatment for COD interventions in client schedules, and examples tend to be vague and somewhat mixed in regard to reflecting appropriate stage-wise treatment.</p>		

Calculating percent of clients receiving service (numerator): If the percent found in Step B was at least 90%, then we recommend using the percent the team reported in Step A as the numerator. If the percent found in Step B is lower than 90%, consider adjusting the team's report using these guidelines:

If other data sources are moderate to high (Step C), then you will apply the percent found in Step B following these rules:

- Take the percent found in Step B and add 10 to it (e.g., $63\% + 10 = 73\%$)

Why add 10? As we are generalizing the findings from the sample to the total caseload, adding 10 helps reduce potential error if the sample underrepresented the work of the team. When other data sources are generally favorable (Step C), we are more inclined to add in this margin of potential error.

- Apply this percent to what the team reported in Step A. For example, 73% is applied to the team's original report of 42%, which is $0.73 \times 0.42 = 0.31$ ($\times 100$) = 31%

If other data sources are low to moderate (Step C), then you will apply the percent found in Step B following these rules:

- Take the percent found in Step B and apply this percent to what the team reported in Step A. For example, 63% is applied to the team's original report of 42%, which is $0.63 \times 0.42 = 0.26$ ($\times 100$) = 26%.
- If other data sources (Step C) indicate a lower quality overall, the evaluators have discretion to reduce the percentage in Step B down by 10. As an example, if Step C was judged to be overall low (very few to no examples judged high quality, nearly none systematic, and weak to generic examples provided), then the 63% may be reduced to 53%. The final adjustment then would be $0.53 \times 0.42 = 0.22$, or 22%.

Refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.

Other Tips:

- If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data.
- If there is reason to believe the team underreported their services, consider relying more on Method 1 process.

Regardless if using Method 1 or 2 to calculate percent receiving integrated treatment for COD, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being clear departures from best practices, such as high use of urine drug analyses or screens and use of confrontation, consider rating a "1" for this item.

For **Team Hope**, 63% of the subsample were found to have documented integrated COD services. Other data sources (Step C) were not favorable, indicating a lower level of systematic delivery with majority having lower quality examples of work. Evaluators applied the 63% to the team's report of 42% (A), resulting an adjusted rate of 26% (0.63×0.42), thereby rating a "2." Likewise, they considered reducing further by 10 to 53% due to Step C results, and found that $0.53 \times 0.42 = 0.22$, or 22%, still rating a "2."

Estimated percent of those receiving integrated treatment for COD from the team
(Numerator):
26%

Co-Occurring Disorders Specialist Interview:

Let's take a look at the Excel spreadsheet (column B) and the number of clients who directly receive integrated treatment for COD from the team. Tell me more about what kinds of services you and the team provided to the clients listed in this spreadsheet.

[Randomly select clients who were noted as receiving individual and/or group treatment, and ask more specifics about the services they receive. Inquire about a client noted as being in an earlier stage of change (column A) who is also receiving services.]

Full Responsibility for EE services (EP2) Excel spreadsheet definition and instructions:

These include all services provided by the employment specialist as well as other team members well-versed in SEE services. Core services include: (1) engagement; (2) EE assessment; (3) job development; (4) job placement (including going back to school, classes); & (5) job coaching & follow-along supports (including supports in academic/school settings). Supported education services also should be noted in this column. EE services reported here should be reflected across other data sources (e.g., progress notes, treatments plans).

Worksheet 6. Method 1. Calculating the number of clients receiving SEE services (EP2) from the team (numerator).	Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving SEE services from the team (Excel spreadsheet, column E)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p> <ul style="list-style-type: none"> Engagement-related SEE services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Selectively exclude clients indicated as receiving EE services from a non-ACT provider (see column E), and/or are attending clubhouse and/or day treatment programming (column L) when follow-up questioning indicates it is in lieu of team's emphasis of EE services. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 	<p>Team Reports: (A) 25%</p>	
<p>Team Hope example. The team reported that 25 of the 100 clients (25%) were receiving SEE services from the team.</p>		
<p>B. What percent of all charts reviewed were observed to have any SEE services (i.e., regardless of it being systematically provided and regardless of quality was judged high or low)? Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B)</p>	
<p>The results of Team Hope's Chart Review found that 10 of 20 (50%) charts were judged to provide some SEE services, per review of progress notes alone.</p>	<p>50%,</p>	

<p>C. What did other data sources indicate as to the quality and systematic delivering of SEE services? (this information may inform how much of an adjustment to make to team's report)</p> <ul style="list-style-type: none"> • Calculate the percent of charts observed with "high quality" examples of SEE services (i.e., # of those judged high quality / # judged to have some SEE service}. • Calculate the percent of charts observed with "systematic delivery" of SEE services (i.e., # of those judged systematic / # judged to have some SEE services}. • Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned SEE services in person-centered plans and/or client schedules, and reliance on other non-ACT SEE services. 	<p>Other Data: (C) 80% "high quality;" 90% "systematic;" and other examples judged to be strong</p>		
<p>The results of Team Hope's Chart Review found that 8 of 10 charts (80%) were judged to be of "high quality," and that 9 of 10 (90%) were systematically delivered. SEE services were included in client schedules, and examples provided were good, clearly reflected a whole team effort, and were generally detailed and reflecting best practices. Also, the team reported assisting the majority of current employed clients in getting those jobs (see column I).</p>		<p>Estimated percent of those receiving SEE services from the Team (Numerator): 30%</p>	
<p>Calculating percent of clients receiving service (numerator): Compare Steps A with B. If there is a significant discrepancy (e.g., a difference of 15 percentage points or more) between these two estimates, adjust from their original reported penetration in the direction of data observed in Step B (chart data). The extent of this adjustment depends on other data sources (see Step C). We recommend using either thirds or quarters to adjust team's reported percent (e.g., a discrepancy of 30 points could be divided in thirds (10, 20, 30), and how many "thirds" used to adjust would depend on other data sources (see Step C)); clear "moderate" findings may suggest cutting the difference in half. Also, refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.</p> <p><u>Other Tips:</u></p> <ul style="list-style-type: none"> • If team reports that all/nearly all clients are receiving the service, then consider adjusting closer to chart review data as the sample would be representative of reported practice (i.e., by default, it reflects Method 2 described below). • If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data. • Regardless if using Method 1 or 2 to calculate percent receiving SEE services, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being a clear departure from best practice, such as extensive preparation and reliance on development of "soft skills" before assisting with getting a job, consider rating a "1" for this item. 			
<p>As an example, there was a discrepancy of 15 percentage points between what Team Hope reported (25%) and what was observed in the charts (50%), with other data sources overall suggesting a high level of practice. Evaluators chose to increase the team's reported percent by one-third of the difference (i.e., $15/3 = 5$), resulting in 30% ($25 + 5$).</p>			

Worksheet 7. Method 2. Calculating the percent of clients receiving SEE (EP2) from the team (numerator).	Number or Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving SEE services from the team (Excel spreadsheet, column E)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p> <ul style="list-style-type: none"> Engagement-related SEE services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Selectively exclude clients indicated as receiving EE services from a non-ACT provider (see column E), and/or are attending clubhouse and/or day treatment programming (column L) when follow-up questioning indicates it is in lieu of team's emphasis of EE services. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 	<p>Team Reports: (A) 25%</p>	
<p>Team Hope example. The team reported that 25 of the 100 clients (25%) were receiving SEE services from the team.</p>		
<p>B. Percent of clients in Step A who were noted as receiving SEE service at all (i.e., regardless of it being systematically provided and regardless of quality was judged high or low), per the Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B) 100%</p>	
<p>In the sample of 20 charts reviewed, 8 charts (40%) were of clients to whom the team had reported to be providing SEE services. The results of Team Hope's chart review found that 8 of 8 (100%) charts were judged to provide some psychiatric rehabilitation, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of SEE services? (this information may inform how much of an adjustment to make to team's report)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of SEE services (i.e., # of those judged high quality / # judged to have some SEE service). Calculate the percent of charts observed with "systematic delivery" of SEE services (i.e., # of those judged systematic / # judged to have some SEE services). Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned SEE services in person-centered plans and/or client schedules, and reliance on other non-ACT SEE services. 	<p>Other Data: (C) 100% "high quality;" 100% "systematic;" and other examples judged to be strong</p>	
<p>Team Hope's Chart Review found that 8 of 8 charts (100%) were judged to be of "high quality," and that 8 of 8 (100%) were systematically delivered. SEE services were included in client schedules, and examples provided were good, clearly reflected a whole team effort, and were generally detailed and reflecting best practices. Also, the team reported assisting the majority of current employed clients in getting those jobs (see column I).</p>		
<p>Calculating percent of clients receiving service (numerator): If the percent found in Step B was at least 90%, then we recommend using the percent the team reported in Step A as the numerator. If the percent found in Step B is lower than 90%, consider adjusting the team's report using these guidelines:</p>		
<p>If other data sources are moderate to high (Step C), then you will apply the percent found in Step B following these rules:</p>		

- Take the percent found in Step B and add 10 to it (i.e., if Step B found 40%, you would add 10 to get 50%).

Why add 10? As we are generalizing the findings from the sample to the total caseload, adding 10 helps reduce potential error if the sample underrepresented the work of the team. When other data sources are generally favorable (Step C), we are more inclined to add in this margin of potential error.

- Apply this percent to what the team reported in Step A (i.e., if the team had reported 30% in Step A, then you would "apply" 50% by: $0.50 \times 0.30 = 0.15$ (X 100) = 15%

If other data sources are low to moderate (Step C), then you will apply the percent found in Step B following these rules:

- Take the percent found in Step B and apply this percent to what the team reported in Step A. For example, 40% is applied to the team's original report of 30%, which is $0.40 \times 0.30 = 0.12$ (X 100) = 12%.
- If other data sources (Step C) indicate a lower quality overall, the evaluators have discretion to reduce the percentage in Step B down by 10. As an example, if Step C was judged to be overall low (very few to no examples judged high quality, nearly none systematic, and weak to generic examples provided), then the 40% (from Step B) may be reduced to 30%. The final adjustment then would be $0.30 \times 0.30 = 0.09$, or 9%.

Refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.

Other Tips:

- If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data.
- If there is reason to believe the team underreported their services, consider relying more on Method 1 process.
- Regardless if using Method 1 or 2 to calculate percent receiving SEE services, if examples cited are clearly a departure from best practices (e.g., all noted examples were judged to be of "low quality" due to there being a clear departure from best practice, such as extensive preparation and reliance on development of "soft skills" before assisting with getting a job, consider rating a "1" for this item.

For **Team Hope**, 100% of the subsample were found to have documented SEE rehabilitation. Other data sources (Step C) were favorable, indicating a high level of systematic delivery and high quality examples of work. Evaluators rated based on the team's original percent as all reported were found to have strong evidence of SEE services. Thus, 25% would be used as the numerator. [Note: Method 2 is less sensitive to detecting team's underreporting of their work, which was the case here for Team Hope.]

Estimated percent of those receiving SEE services from the team
(Numerator):
25%

Employment Specialist Interview:

Let's take a look at the Excel spreadsheet (column E) and the number of clients who directly receive EE services from the team. Tell me more about what kinds of services you and the team provided to the clients listed in this spreadsheet. [Randomly select clients who are noted as receiving services, and inquire about what those services are; select clients noted as being competitively employed (column F), and corroborate how the team may have assisted in obtaining that position (column I).]

Full Responsibility for WMR Services (EP3)**Excel spreadsheet definition and instructions:**

These services include a formal and/or manualized approach to working with clients to build and apply skills related to their recovery. Examples of such services include development of WRAP and provision of the IMR curriculum. These services include a formal and/or manualized approach to working with clients to build and apply skills related to their recovery. WMR services reported here should be reflected across other data sources (e.g., progress notes, treatment plans). **NOTE: When completing the column for the provision of WMR services, please specify the type of service that the client is receiving (e.g., IMR group, individual WRAP).**

Worksheet 8. Method 1.		Percent of clients	
Calculating the number of clients receiving manualized WMR services (EP3) from the team (numerator).		Team Hope Example	Data Input
A. What percent of clients did the team say is receiving manualized WMR services from the team (Excel spreadsheet, column K)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.		Team Reports: (A) 12%	
<ul style="list-style-type: none"> Engagement-related WMR services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 			
Team Hope example. The team reported that 12 of the 100 clients (12%) were receiving WMR services from the team.			

<p>B. Percent of clients noted as receiving manualized WMR service at all (i.e., regardless of it being systematically provided and regardless of quality was judged high or low}, per the Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data}.</p>	<p>Chart Review Results: (B) 10%</p>	
<p>The results of Team Hope's Chart Review found that 2 of 20 (10%) charts were judged to provide some manualized WMR, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of manualized WMR services? (this information may inform how much of an adjustment to make to team's report}</p> <ul style="list-style-type: none"> • Calculate the percent of charts observed with "high quality" examples of WMR services (i.e., # of those judged high quality / # judged to have some WMR service}. • Calculate the percent of charts observed with "systematic delivery" of WMR services (i.e., # of those judged systematic / # judged to have some WMR services}. • Consider the weight of examples from interviews (quality and quantity of examples}, whether there appeared to be planned WMR services in person-centered plans and/or client schedules, whether the WMR manual is actually used in services (e.g., WRAPs are being completed}, or mostly referred to as a resource (e.g., there is focus on discussing client's "toolbox" without completing WRAPs}. 	<p>Other Data: (C) 50% "high quality;" 50% "systematic;" and other examples judged to be strong.</p>	
<p>The results of Team Hope's Chart Review found that 1 of 2 charts (50%) were judged to be of "high quality," and that 1 of 2 (50%) were systematically delivered. Although planning was lacking in specified interventions and there was limited notation of planned WMR interventions in client schedules. Examples tended to be limited, but having some detail.</p>		
<p>Calculating percent of clients receiving service (numerator): Compare Steps A with B. If there is a significant discrepancy (e.g., a difference of 10 percentage points or more) between these two estimates, adjust from their original reported penetration in the direction of data observed in Step B (chart data}. The extent of this adjustment depends on other data sources (see Step C}. We recommend using either thirds or quarters to adjust team's reported percent (e.g., a discrepancy of 15 points could be divided in thirds (5, 10, 15}, and how many "thirds" used to adjust would depend on other data sources (see Step C}); clear "moderate" findings may suggest cutting the difference in half. Also, refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.</p> <p><u>Other Tips:</u></p> <ul style="list-style-type: none"> • If team reports that all/nearly all clients are receiving the service, then consider adjusting closer to chart review data as the sample would be representative of reported practice (i.e., by default, it reflects Method 2 described below}. • If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data. • Regardless if using Method 1 or 2 to calculate percent receiving WMR services, if examples cited are clearly a departure from best practices. 	<p>Estimated Percent of those receiving SEE services from the Team (Numerator): 12%</p>	
<p>As an example, there was a discrepancy of 2 percentage points between what Team Hope reported (12%) and what was observed in the charts (10%), with other data sources overall suggesting a moderate level of practice. Evaluators therefore used the team's report of 12%.</p>		

Worksheet 9. Method 2. Calculating the percent of clients receiving manualized WMR services (CP8) from the team (numerator).	Number or Percent of clients	
	Team Hope Example	Data Input
<p>A. What percent of clients did the team say is receiving manualized WMR services from the team (Excel spreadsheet, column K)? Percent is calculated by counting the number of clients reported to be receiving this service from the team and divide by the total number of clients served.</p>	<p>Team Reports: (A) 12%</p>	
<ul style="list-style-type: none"> Engagement-related manualized WMR services may also be counted, but it is recommended that the evaluator request examples of engagement efforts for a selection of clients. 		
<ul style="list-style-type: none"> Be sure to only include clients seen by staff who meet the team inclusion criteria described in OS1 and OS5. 		
<p>Team Hope example. The team reported that 12 of the 100 clients (12%) were receiving manualized WMR services WMR services from the team.</p>		
<p>B. Percent of clients in Step A who were noted as receiving manualized WMR services at all (i.e., regardless of it being systematically provided and regardless of quality was judged high or low), per the Chart Review Tally Sheet Part I (Please refer to the TMACT Calculation Workbook to enter and compute these data).</p>	<p>Chart Review Results: (B) 67%</p>	
<p>In the sample of 20 charts reviewed, 3 charts (15%) were of clients to whom the team had reported to be providing manualized WMR services (this is a highly representative sample). The results of Team Hope's Chart Review found that 2 of 3 (67%) charts were judged to provide some manualized WMR services, per review of progress notes alone.</p>		
<p>C. What did other data sources indicate as to the quality and systematic delivering of manualized WMR services? (this information may inform how much of an adjustment to make to team's report)</p> <ul style="list-style-type: none"> Calculate the percent of charts observed with "high quality" examples of WMR services (i.e., # of those judged high quality / # judged to have some WMR service). Calculate the percent of charts observed with "systematic delivery" of WMR services (i.e., # of those judged systematic / # judged to have some WMR services). Consider the weight of examples from interviews (quality and quantity of examples), whether there appeared to be planned WMR interventions in person-centered plans and/or client schedules, whether the WMR manual is actually used in services (e.g., WRAPs are being completed), or mostly referred to as a resource (e.g., there is focus on discussing client's "toolbox" without completing WRAPs). 	<p>Other Data: (C) 50% "high quality;" 50% "systematic;" and other examples judged to be moderately strong</p>	
<p>Team Hope's Chart Review found that 1 of 2 charts (50%) were judged to be of "high quality," and that 1 of 2 (50%) were systematically delivered. Although planning was lacking in specified interventions and there was limited notation of planned manualized WMR services in client schedules, several good examples were provided by interviewed staff.</p>		
<p>Calculating percent of clients receiving service (numerator): If the percent found in Step B was at least 90%, then we recommend using the percent the team reported in Step A as the numerator. If the percent found in Step B is lower than 90%, consider adjusting the team's report using these guidelines:</p> <p>If other data sources are moderate to high (Step C), then you will apply the percent found in Step B following these rules:</p>		

- Take the percent found in Step B and add 10 to it (i.e., if Step B found 67%, you would add 10 to get 77%).

Why add 10? As we are generalizing the findings from the sample to the total caseload, adding 10 helps reduce potential error if the sample underrepresented the work of the team. When other data sources are generally favorable (Step C), we are more inclined to add in this margin of potential error.

- Apply this percent to what the team reported in Step A (i.e., if the team had reported 12% in Step A, then you would "apply" 77% by: $0.12 \times 0.77 = 0.09$ (X 100) = 9%

If other data sources are low to moderate (Step C), then you will apply the percent found in Step B following these rules:

- Take the percent found in Step B and apply this percent to what the team reported in Step A. For example, 67% is applied to the team's original report of 12%, which is $0.67 \times 0.12 = 0.08$ (X 100) = 8%.
- If other data sources (Step C) indicate a lower quality overall, the evaluators have discretion to reduce the percentage in Step B down by 10. E.g., if Step C was judged to be overall low (very few to no examples judged high quality, nearly none systematic, and weak to generic examples provided), then the 67% (from Step B) may be reduced to 57%. The final adjustment then would be $0.57 \times 0.12 = 0.07$, or 7%.

Refer to Table 24 for further guidelines on making such adjustments so that final ratings comport with overall impression of team given data.

Other Tips:

- If the timeframe of the chart review predates the timing of when the Excel spreadsheet is completed, there may be more discrepancies; in such cases, we recommend more careful consideration of all data sources to understand current practices in addition to review of chart data.
- If there is reason to believe the team underreported their services, consider relying more on Method 1 process.
- Regardless if using Method 1 or 2 to calculate percent receiving WMR services, if examples cited are clearly a departure from best practices, consider rating a "1" for this item.

For **Team Hope**, 65% of the subsample were found to have documented manualized WMR services. Other data sources (Step C) were favorable. Evaluators increased the 65% up to 75% and was applied to the team's report of 12%, resulting in 9% (0.75×0.12).

Peer Specialist Interview:

Do you provide any manualized wellness management and recovery (WMR) services?

[If yes:]

Let's take a look at the Excel spreadsheet and the number of clients who have received manualized WMR services from the team. [Query for quality of services based on what is reported; whether the WMR service is formal and/or manualized.] ***Tell me more about what kinds of services you and the team provided to the clients listed in this spreadsheet*** (randomly select clients marked as receiving specific WMR services and ask for additional information to ascertain that the interventions were indeed manualized).

Clinician Interview:

Do you provide any manualized wellness management and recovery (WMR) services?

[If yes:]

Let's take a look at the Excel spreadsheet (column K) and the number of clients who directly receive manualized WMR services from the team. [Query for quality of services based on what is reported. Prompt for specific strategies used in IMR or WRAP, as well as gauge whether other deliberate, but less formal, WMR strategies are used.] ***Tell me more about what kinds of services you and the team provided to the clients listed in this spreadsheet*** (randomly select clients marked as receiving WMR services and ask what is being provided).
Do you provide any Wellness Management and Recovery Services like IMR or WRAP?

Calculating the Denominator:

% of clients needing and/or wanting service
(see base rates listed below)

To determine the denominator, we refer to standardized base rates that are thought to reflect the percentage of ACT clients who would want these services, as well as those who may not expressed that they want, but appear to need these services and would benefit from further engagement in that particular service domain.

Extrapolating from published research and expert opinion, a conservative base rate is used for estimating the percent of clients who need/want integrated treatment for COD and EE services. It is assumed that *at least 40%* of ACT clients will need/want these services. It is assumed that all ACT clients will need/want WMR services, but a slightly more conservative estimate of 90% is used to calculate need/want to allow for client choice and measurement error.

We estimated that *at least 20%* of ACT clients will need/want the following service:

- Manualized WMR Services

We estimated that *at least 40%* of ACT clients will need/want the following services:

- Integrated Treatment for COD ¹
- EE Services

¹If the team's reported rate of COD (see Excel spreadsheet, column A) exceeds 40%, then use their count as the denominator (e.g., it is common for more urban ACT teams to serve a higher rate of individuals with COD). If the team's reported rate is less than 40%, then use the suggested base rate of 40%; it is assumed that poor screening and assessment practices can result in a lower rate. The team may present an argument defending their original estimate, such as cultural and/or regional factors and/or program policies that have resulted in lower rates (e.g., having a separate COD ACT team). Query the team leader, as appropriate.

Service	Numerator (Method 1)	Numerator (Method 2)	Denominator	Final Calculation (Method 1)	Final Calculation (Method 2)
EP1. Integrated Treatment COD	31%	26%	42%	31/42 = 74%	26/42 = 62%
EP2. SEE Services	30%	25%	40%	30/75 = 75%	25/40 = 63%
EP3. Manualized WMR Services	12%	9%	20%	12/20 = 60%	9/20 = 45%

Table 25. A Description of Observed Data Given Actual Service Penetration: A Reference Guide for Evaluators.

Service penetration level	Considering the Evidence
High (75 – 100%) Rating 4 or 5	For a team that provides a high level of service penetration, evidence will be observed across most or all data sources. Of the approximate number of clients expected to want/need that particular service (e.g., 40% of total caseload for EE services), at least 75% of reviewed sampled charts (see Chart Review Tally Sheet Part I) will have service of interest documented in the progress notes. Service will be commented on during the observation of daily team meeting (i.e., reported contacts involving specialty services, and scheduled contacts to address client's specialty service needs), and a relatively large breadth of specialty services being provided. Likewise, there will be few clients who are participating in other non-ACT psychosocial programs (e.g., clubhouse, day treatment programming), which may reflect a lack of EE and/or wellness service activities. The specification of specialty service interventions will likely be very precise for a team that has fully embraced this practice.

Moderate (50%) Rating 2 or 3	<p>For a team that provides a moderate level of service penetration, evidence will be observed across several data sources. Of the approximate number of clients expected to want/need that particular service (e.g., 40% of total caseload for EE services), between 40 and 60% of reviewed sampled charts (see Chart Review Tally Sheet Part I) will have service of interest documented in the progress notes. Service will be commented on during the observation of daily team meeting (i.e., reported contacts involving specialty services, and scheduled contacts to address client's specialty service needs), the breadth of specialty services being provided may be limited and reflect less systematic implementation of the specialty service.</p>
Low (30% or less) Rating 1 or 2	<p>For a team that provides a low level of service penetration, evidence will be observed across very few data sources—e.g., chart review (no or very few charts have notes that make mention of specialty services, and/or statements about the intervention may be vague; one or fewer treatment plans make note of specialty service), observation of daily team meeting (i.e., no mention of specialty services), and specialty services, when observed, lack breadth. Specialty service activities do not appear to be systematically delivered or follow from a plan (per the definition provided in Excel spreadsheet).</p>

*Note that these heuristic guidelines are intended to provide examples of observed evidence at three distinct levels of service penetration (high, moderate, and low). For teams providing more intermediate levels (moderate-high or low-moderate), evaluators should take into consideration the overall weight of the evidence, considering the three levels provided here. Data on service penetration summarized in Chart Tally II should be used to support, or adjust (upwards or downwards), the team's reported penetration rate, considering the number of clients assumed to want/need that service; refer to appropriate Worksheet that is included in these rating guidelines.

	1	2	3	4	5
EP1 Full Responsibility for Integrated Treatment for Co-Occurring Disorders (COD)	Less than 20% of clients in need of integrated treatment for COD are receiving them from the team.	20 - 49% of clients in need of integrated treatment for COD are receiving them from the team.	50 - 74% of clients in need of integrated treatment for COD are receiving them from the team.	75 - 89% of clients in need of integrated treatment for COD are receiving them from the team.	90% or more of clients in need of integrated treatment for COD are receiving them from the team.
EP2 Full Responsibility for Employment and Educational (EE) Services	Less than 20% of clients in need of employment and educational services are receiving them from the team.	20 - 49% of clients in need of EE services are receiving them from the team.	50 - 74% of clients in need of EE services are receiving them from the team.	75 - 89% of clients in need of EE services are receiving them from the team.	90% or more of clients in need of EE services are receiving them from the team.
EP3 Full Responsibility for Wellness Management and Recovery (WMR) Services	Less than 20% of clients in need of WMR services are receiving them from the team.	20 - 49% of clients in need of WMR services are receiving them from the team.	50 - 74% of clients in need of WMR services are receiving them from the team.	75 - 89% of clients in need of WMR services are receiving them from the team.	90% or more of clients in need of WMR services are receiving them from the team.

EP4. Integrated Treatment for Co-Occurring Disorders (COD)

Definition: The TEAM practices from a model aligning with integrated treatment for co-occurring disorders (COD) where the TEAM (1) considers interactions between mental illness and COD; (2) does not have absolute expectations of abstinence and supports harm reduction; (3) understands and applies stages of change readiness in treatment; (4) is skilled in motivational interviewing; and (5) follows cognitive-behavioral principles.

Rationale: The integrated treatment for co-occurring disorders, delivered within the larger integrated treatment for co-occurring disorders that reflects many practices across the TMACT, attends to the concerns of both SMI and co-occurring disorders for maximum opportunity for recovery and symptom management. It is important that the integrated treatment for co-occurring disorders is embraced by all team members.

DATA SOURCES (*Denotes primary data source)

Team Leader Interview

What do you think is the goal for clients with co-occurring disorders with respect to substance use?

How does your team view abstinence versus reduction of use? [Attend to whether goals are individualized and vary from more immediate abstinence to harm reduction given clients' stages of change readiness.]

[Select from Excel three clients noted to be in an early stage of change, cross-reference the ID key to have name available, and for each:] ***What is the team's understanding of how (insert client) use is impacting their mental health? How is their mental health impacting their use? What other reasons might (client's name) be using?***

Does your team employ harm reduction tactics?" [If "yes"] ***What are some examples?*** [Prompt to get at least five examples.]

In what ways is confrontation used?

<p>Are you familiar with a stage-wise approach to substance use treatment?</p> <p>[If yes:] Can you give some examples of how your program uses this approach? (Attend to discussion of engagement and MI strategies and also active substance use counseling. Is the team directly providing services or referring out?)</p> <p>In what ways does your team use urine drug screens or other types of monitoring?</p> <p>If someone is interested in reducing or <u>stopping their substance use</u>, what types of interventions would you use to assist them? [Listen for examples of <u>cognitive behavioral techniques</u>.]</p> <p>Who would you refer to AA, NA or any other self-help groups? What about detox programs? [Seek examples.]</p>	
Psychiatric Care Provider Interview	
<p>Can you tell me a little bit about how you work with clients with comorbid substance use problems?</p>	

<p><i>What do you consider when prescribing medications and have you used medications to address substance use?</i> [Probe for whether provider is a) willing to prescribe psychiatric medications despite active substance use; b) whether there is greater attention to prescribing addictive substances, such as benzodiazepines; and c) whether the provider has used medications to directly treat substance use (e.g., clozapine to reduce alcohol and drug use in schizophrenia, naltrexone to reduce cravings and intoxicating effects, or acamprosate to reduce intensity and duration of relapses}. Responses are pertinent for criteria #1 - #2 in particular. Note, to receive full credit, the psychiatric care provider should voice some awareness that these are treatment options, and have strategically used them to address comorbid substance use.]</p>	
Co-Occurring Disorders Specialist Interview*	
<p><i>Could you summarize your fellow team members' views of treating clients with comorbid substance use problems?</i> [Probe for whether there is agreement or disagreement among staff in how to work with clients who are actively using. <i>Do some staff promote more traditional substance use treatment approaches, which may include referring out to other providers to address substance use?</i>]</p>	
Peer Specialist	
<p><i>How would you describe your team's approach to supporting people with co-occurring substance use and mental health disorders?</i></p>	

Clinician Interview*

Now we are going to talk about your team's work with people with co-occurring substance use.

[Select from Excel three clients noted to be in an early stage of change, cross-reference the ID key to have name available, and for each:] ***What is the team's understanding of how (insert client) use is impacting their mental health? How is their mental health impacting their use? What other reasons might (client's name) be using?***

What do you think is the goal for clients with COD with respect to their substance use? How does your team view abstinence versus reduction of use?

[attend to whether goals are individualized and vary from more immediate abstinence to harm reduction given clients' stages of change readiness.]

Does your team employ harm reduction tactics? [If yes:] ***What are some examples?***

In what ways is confrontation used?

Are you familiar with a stage-wise approach to substance use treatment? [If yes:] ***Give some examples of how your program uses this approach.*** [Attend to discussion of engagement and MI strategies and also active substance use counseling. Is the team directly providing services or referring out?]

<p><i>In what ways does your team use urine drug screens or other types of monitoring?</i></p> <p><i>If someone is interested in reducing or stopping their substance use, what types of interventions would you use to assist them?</i> [Listen for examples of <u>cognitive behavioral techniques</u>.]</p> <p><i>Who would you refer to AA, NA or any other self-help groups? What about detox programs?</i></p>	
ITEM RESPONSE CODING	
Rating Guidelines	
<p>This item is intended to be an approximate measure of the team's adherence to an evidence-based approach to integrated treatment for COD, both philosophically (i.e., do they embrace these principles within their core belief set) and in practice (i.e., do they apply these principles in their work with clients). Judgment of whether a specific criterion is fully vs. partially met should consider multiple data sources. This item is focused on the practice of the entire team. As it is unlikely that you will be able to interview each team member, use team leader interview as primary data source, but also consider information gathered from COD specialist, other staff, content of progress notes, and discussions observed during daily team meeting.</p> <p>Refer to Table 26 below to determine if criteria are met at all, partially, or fully. If the program is fully based in integrated treatment for COD principles, the item is coded as a "5."</p>	

Table 26. Integrated Treatment for Co-Occurring Disorders (COD)

Criteria for the WHOLE TEAM:	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
<p>Criterion #1: considers interactions between mental illness and COD</p>	<p>Most team members' understanding of the interplay between mental illness and substance appears more superficial or believe one is to be addressed before the other.</p>	<p>Evidence is mixed: some team members clearly appreciate the interaction of mental illness and substance use, while others' understanding appears more superficial or believe one is to be addressed before the other.</p>	<p>All or nearly all team members appear to consider the interaction between mental illness and COD, and recognize the importance of simultaneously addressing both. The team works to understand how substance use, mental health symptoms, and environment may be influencing one another, both positively and negatively. No team member believes in parallel or sequential treatment of mental illness and substance use disorders.</p>

Criterion #2: does not have absolute expectations of abstinence and supports harm reduction	All or nearly all team members have absolute expectations of abstinence and do not value the harm reduction model, OR one or two members strongly hold to these values of abstinence over harm reduction and their beliefs have negatively affected the team and work with clients.	Most all team members appear to practice from a harm reduction model, and do not have absolute expectations of abstinence. One or two members appear to have conflicting views, but these deviations appear to have minimal impact on the team and work with clients.	All or nearly all team members appear to practice from a harm reduction model. No one has absolute expectations of abstinence.
Criterion #3: understands and applies stages of change readiness in treatment	Most team members do not understand stages of change readiness theory and therapeutic implications, OR embrace competing theories (e.g., sees substance use as a character flaw, or believes that all clients who use require AA/NA).	There is considerable variation across team members in their understanding and accurate application of stages of change readiness theory, OR most appear to understand the theory, but are less systematic in their application in practice.	All or nearly all team members appear to understand and accurately apply stages of change readiness theory when delivering treatment to those with COD.
Criterion #4: is skilled in MI	Most team members are not skilled in motivational interviewing techniques.	There is considerable variation across team members in their accurate understanding of MI, OR team members' understanding is somewhat superficial and practice is more limited.	All or nearly all team members appear to understand and accurately practice MI techniques when working with clients with COD. Examples of MI techniques include: use of open-ended questions; use of affirmations; use of reflective listening; use of summaries; examining pros and cons of use (decisional balance); scaling desires and abilities.
Criterion #5: follows CBT principles	Most team members do not follow CBT principles, possibly due to a lack of understanding of their own OR conflicting treatment philosophies.	There is considerable variation across team members in their accurate understanding of CBT principles, OR team members' understanding is somewhat superficial and practice is more limited.	All or nearly all team members appear to understand and apply CBT principles when working with clients who have comorbid substance use problems. Examples of CBT interventions include: understanding the relationship between thoughts, feelings, behaviors, and consequences; recognizing and replacing irrational thoughts; replacing maladaptive behaviors with competing adaptive behaviors.

	1	2	3	4	5
EP4. Integrated Treatment for Co-Occurring Disorders (COD)	Criteria are not met.	Only 1 - 3 criteria are met.	4 criteria met at least PARTIALLY (1 absent) OR 5 criteria met with 3 or more PARTIALLY met.	Team primarily operates from integrated treatment for COD, meeting all 5 criteria, with up to 2 PARTIALLY met.	Team is fully based in integrated treatment for COD principles, FULLY meeting all 5 criteria.

EP5. Supported Employment & Education (SEE)

Definition: The TEAM practices from a model aligning with evidence-based supported employment and education (SEE) and the TEAM:

- (1) Values competitive work as a goal for all clients;
- (2) Believes and supports that a client's expressed desire to work is the only eligibility criterion for SEE services;
- (3) Believes and supports that on-the-job assessment is more valuable than extensive prevocational assessment;
- (4) Believes and supports that placement should be individualized and tailored to a client's preferences; and
- (5) Believes that ongoing supports and job coaching should be provided when needed and desired by client, and has provided such supports.

Rationale: SEE is an evidence-based practice for adults with SMI. Successful implementation of SEE will involve full participation of all team members.

DATA SOURCES (* denotes primary data source)

Excel spreadsheet (columns F, G, H & I)

Examine the types of places individuals are working (competitive vs volunteer), whether the settings appear to be varied, and the extent to which the team has helped people obtain employment.

Employment Specialist Interview*

Could you summarize your fellow team members' views of assisting clients in obtaining competitive employment?

[Probe for whether there is agreement or disagreement among staff in how to assist clients around their work goals. Do some staff believe in extensive pre-vocational assessment or believe that some clients are not ready for employment, possibly because of substance use or poor personal care?]

Team Leader Interview

What is the team's overall approach to employment and educational services within the team? [Prompt for familiarity with SEE including the criteria listed above. Reference Excel spreadsheet for more information on the team's efforts in helping people with competitive employment.]

Peer Specialist

How would you describe your team's approach to supporting people who are interested in employment?

Clinician Interview*

Now let's talk about employment and education services provided by the team.

How does the employment specialist come to work with certain clients? How does the team make that decision?

[Seek information regarding team's active role in engaging interest and referral.]

What work programs do ACT clients access (e.g., sheltered work programs, work crews, transitional employment)?

Are there examples of where the team is providing training to help a person prepare to get a job? [If yes, ask for examples and probe for whether the team is actively doing job search at the same time, how much this preparation may be stalling a job search, and generally if any "work readiness" criteria are being considered.]

Are you familiar with supported employment & education? [If yes:] *What is your understanding of the model?*

Can you provide examples of how team members encourage and support competitive employment?

[Select clients who are noted in the Excel spreadsheet to be in competitive employment, cross-reference the ID key to have name available, and ask:]

Can you describe how the team is providing supports to (insert client name) to help (him or her) keep this job? Do you know if this client has a Career Profile and have you ever seen it? [If yes, further inquire how they use information in the Career Profile.]

If a client says they want to work full-time, but you know they will lose their benefits, what do you typically do?

ITEM RESPONSE CODING

Rating Guidelines

This item is intended to be an approximate measure of the team's adherence to evidence-based SEE, both philosophically (i.e., do they embrace these principles within their core belief set) and in practice (i.e., do they apply these principles in their work with clients). Judgment of whether a specific criterion is Fully vs. Partially met should consider multiple data sources. This item is focused on the practice of the entire team. As it is unlikely that you will be able to interview each team member, use the team leader interview as primary data source, but also consider information gathered from employment specialist, other clinicians, and discussions observed during daily team meeting.

Refer to Table 27 below to determine if criteria are met at all, partially, or fully. If the program is fully based in SEE principles, the item is coded as a "5."

Table 27. Supported Employment & Education (SEE)

Criteria for the WHOLE TEAM	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: values competitive work as a goal for all clients	Most team members do not appear to embrace the value of competitive employment as an immediate, achievable goal, as reflected by their work with clients.	Evidence appears to be mixed: the value of competitive employment varies considerably across team members, and/or the value is articulated, but with less consistent application in practice.	All or nearly all team members appear to value the importance of competitive work, particularly as an immediate, achievable goal, and these values are reflected in their work with clients.
Criterion #2: believes and supports that a client's expressed desire to work is the only eligibility criterion for SEE services	Most team members appear to value "work readiness" criteria other than client's expressed desire to work. These other "work readiness" criteria may include sobriety, medication adherence, and symptom stability (e.g., no active hallucinations, motivation and follow-through).	Evidence appears to be mixed: some team members appear to hold other less consequential "work readiness" criteria as more important than client's expressed desire to work.	All or nearly all team members appear to believe that the client's expressed desire to work is the only eligibility criterion for SEE services, as reflected in both their expressed values and work with clients. No team member appeared to hold less consequential "work readiness" criteria as more important than client's expressed desire to work. "Work readiness" refers to expecting clients to address/reduce/resolve symptoms and behaviors (poor self-grooming, substance use, medication adherence) before assisting with SEE.

Table 27. Supported Employment & Education (SEE)

Criteria for the WHOLE TEAM	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #3: believes and supports that on-the-job assessment is more valuable than extensive prevocational assessment	Most team members strongly value extensive prevocational assessment practices (e.g., spending a lot of time completing assessment paperwork, evaluating skills via work groups, expecting clients to complete work trials).	Evidence appears to be mixed: some team members appear to value the practice of extensive prevocational assessment, which may include any trial experience testing soft skills (e.g., punctuality, attention, social skills, grooming} thereby delaying progress toward achieving employment.	All or nearly all team members appear to value the importance of on-the-job assessment and limits extensive prevocational assessment, which can unnecessarily delay progress toward the employment goal. No team member appeared to clearly advocate for extensive work trials and pre-vocational assessments.
Criterion #4: believes and supports that placement should be individualized and tailored to a client's preferences (See Excel spreadsheet columns F, G, H & I}	Most team members appear to minimize the importance of individualized and tailored placements. The team may heavily rely on a few select competitive and noncompetitive employment opportunities known to hire their clients.	Evidence appears to be mixed: some team members appear to minimize the importance of individualized and tailored placements, possibly preferring a few select competitive and noncompetitive employment opportunities known to hire their clients.	All or nearly all team members appear to believe that placement should be individualized and tailored to a client's preferences, as evidenced by their expressed values and observed practices (e.g., efforts to identify and share a range of employment opportunities in community}. It appears that client's preferences are being attended to, as indicated by a broad array of competitive job settings, per the Excel spreadsheet (e.g., not all are fast food).
Criterion #5: believes that ongoing supports and job coaching should be provided when needed and desired by client	Most team members appear to <u>not</u> view themselves as being responsible for providing ongoing supports and coaching to clients as they engage in educational or work activities.	Evidence appears to be mixed: some team members appear not to value the team's role as providing ongoing supports (e.g., some team members may share stories about when they didn't think job coaching and support was helpful or that it isn't the role of the team or employment specialist to provide).	All or nearly all team members appear to believe that ongoing supports and job coaching should be provided when needed and desired by the client, as evidenced by expressed values and observed practices (e.g., team members consistently report that they think these strategies help and that it is the role of the ACT team to provide, team members may describe when they or others on the team have directly provided such coaching and support).

EP5. Supported Employment & Education (SEE)	1	2	3	4	5
	Criteria are not met.	Only 1 - 3 criteria are met.	4 criteria met at least PARTIALLY (1 absent} OR 5 criteria met with 3 or more PARTIALLY met.	Team primarily embraces SEE, meeting all 5 criteria, with up to 2 PARTIALLY met.	Team fully embraces SEE and FULLY meets all 5 criteria.

EP6. Engagement & Psychoeducation with Natural Supports

Definition: The FULL TEAM works in partnership with clients' natural supports. As part of their active engagement of natural supports, the team:

- (1) Provides education about their loved one's illness;
- (2) Teaches problem-solving strategies for difficulties caused by illness; and
- (3) Provides &/or connects natural supports with social & support groups.

Rationale: It is the ACT team's role to work collaboratively with clients to help identify natural supports in the community who may be able to provide a role in supporting the client's recovery and furthering community integration. Once these individuals are identified and clients consent to any contact with them, the ACT team should actively engage them by providing them with the information necessary to help them to further support the ACT client and either directly provide or connect them with supports in the community.

DATA SOURCES (* denotes primary data source)

Excel spreadsheet (column X)

Examine responses to contacts with clients' natural supports. While referring to the ID key to access names, randomly select examples to further query about the nature of those contacts.

Daily Team Meeting - Observation Form (p. 189-192)

Listen for whether team members have had contacts with natural supports and the extent to which their contact reflects education, problem-solving and overall support.

Team Leader Interview*

Now I'm going to ask you some questions about how the team works with families and natural supports.

How does the team typically work with clients' families and natural supports?

Can you provide (additional) examples of the team educating natural supports about their loved one's illness? [Prompt for clarification if examples represent proactive or reactive encounters with supports]

Can you provide (additional) examples of the team working with natural supports and the client to develop better problem-solving skills? [Prompt for clarification if examples represent proactive or reactive encounters with supports]

In what (other) ways has the team helped connect natural supports to support groups?

Randomly select specific clients listed in the Excel spreadsheet with whom the team has had contact with natural supports, reference the ID key to access names, and ask: ***Describe what the team did with this particular client's natural supports.***

Clinician Interview

Now I'm going to ask you some questions about how the team works with families and natural supports.

How does the team typically work with clients' families and natural supports?

[Note: if the same client examples come up across interviews, prompt for other examples to understand scope of practice.]

Can you provide (additional) examples of the team educating natural supports about their loved one's illness? [Prompt for clarification if examples represent proactive or reactive encounters with supports]

Can you provide (additional) examples of the team working with natural supports and the client to develop better problem-solving skills? [Prompt for clarification if examples represent proactive or reactive encounters with supports]

In what (other) ways has the team helped connect natural supports to support groups?

Randomly select specific clients listed in the Excel spreadsheet with whom the team has had contact with natural supports, reference ID key to access names, and ask: **Describe what the team did with this particular client.**

Client Interview

Does the team ever talk to anyone important in your life—such as family, close friends, landlords, church members, or employers? [If yes, probe what the content of those contacts are-do they appear to be quality contacts with the intent of better serving the client?]

ITEM RESPONSE CODING

Rating Guidelines

Please refer to Table 28 below to determine if services are provided at all, partially, or fully.

Table 28. Engagement & Psychoeducation with Natural Supports

Service	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
As part of their active engagement of natural supports, team: Service #1: provides education about their loved one's illness;	Team very rarely educates clients' natural supports about their loved one's illness, possibly due to a lack of priority or a lack of understanding of their own.	Examples are provided, but they appear to be isolated and/or reactive/passive to a situation. Team does not appear to prioritize their role as an educator for clients' natural support system.	Team seeks opportunities to educate clients' natural supports about their loved one's illness. This is done both informally (through phone calls, prearranged meetings, chance encounters) and through more structured psychoeducation meetings (individual and/or group). Examples suggest this work is occurring across more than a select group of clients.
Service #2: teaches problem-solving strategies for difficulties caused by illness;	Team very rarely, if at all, works with clients' natural supports to develop effective problem-solving skills.	Examples are provided, but they appear to be isolated and/or reactive/passive to a situation (e.g., a crisis event). Team does not appear to prioritize their role as a point of intervention within the clients' natural support system.	Team embraces their role as an interventionist by proactively addressing problems that exist in the natural support system, including teaching clients' supports problem-solving strategies (e.g., to reduce conflict and increase a sense of a shared mission. Examples suggest this work is occurring across more than a select group of clients.
Service #3: provides &/or connects natural supports with social & support groups.	Team does not appear to attend to the social support needs of clients' natural supports.	Team provides several examples, but this practice is not systemically and routinely provided by the team.	Team directly provides support groups, coordinates with NAMI or other community-based agencies that provide such groups, and/or routinely provides this information to natural supports. The latter could include information in the ACT admission packet and/or group information provided to natural supports when they first meet with them.

	1	2	3	4	5
EP6. Engagement & Psychoeducation with Natural Supports	Team does not provide any of the specified services with clients' natural supports.	1 or 2 services are provided.	ALL 3 services are provided, but 2-3 services only PARTIALLY.	ALL 3 services are provided but 1 only PARTIALLY.	ALL 3 services are FULLY provided by team.

EP7. Empirically-Supported Psychotherapy

Definition: The team: (1) deliberately provides individual and/or group psychotherapy, as specified in the treatment plan; (2) uses empirically-supported techniques to address specific symptoms and behaviors; and (3) maintains an appropriate penetration rate in providing deliberate empirically-supported psychotherapy to clients in need of such services. Although all team members can be trained to effectively use therapeutic techniques, such as cognitive behavioral therapy and motivational interviewing, the team also ideally has a licensed therapist.

Rationale: In addition to providing case management/support, psychiatric rehabilitation (e.g., skills training), and wellness and recovery services to clients, core clinical members of the ACT team should be competent in and provide empirically-supported psychotherapy to address the wide range of clinical and behavioral issues for this population (e.g., psychotic symptoms, anxiety, depression, criminal justice involvement, symptoms consistent with borderline personality disorder).

DATA SOURCES (* denotes primary data source)

Excel spreadsheet (column M)*

Examine how many clients are receiving psychotherapy services from the team. Note the specific types of psychotherapeutic techniques reported.

Chart Review

Review the extent to which the team delivers empirically-supported therapies, and how routine are these contacts (e.g., weekly, every other week).

Team Leader Interview

Do clients on your team ever receive psychotherapy from the team? [If yes]:
Tell me more about the kind of psychotherapy services provided. Is it formally or more informally provided? Is there anyone on your team who is a trained therapist? Have other staff received training in specific psychotherapies and/or receive supervision in the use of psychotherapy (e.g., CBT or MI)? Does psychotherapy tend to take place in the context of other services provided (e.g., providing supportive counseling while grocery shopping)?

[Refer to clients noted as seeing non-ACT team therapists in column M of the Excel spreadsheet; select clients and inquire as to why they are seeing a non-ACT therapist.]

Clinician Interview*

Note that team members chosen for this clinician interview should ideally include one qualified therapist.

Do you provide psychotherapy? How would you describe your style in therapy? What kind of therapy do you typically offer? What does it look like? Can you give me examples of specific methods you use with clients who have specific symptoms or concerns? Give specific examples (e.g., someone with social anxiety; someone with significant trauma history).

What kind of resources or training materials does your team use to guide delivery of therapy to clients on the team? (Prompt for specific worksheets, homework, diary cards/logs. See Table 29 below for examples of manuals.)

Refer to responses in column M of the Excel spreadsheet and prompt for:

About how often is psychotherapy provided—weekly, every other week, monthly, as needed? How long is each session, on average?

Let's talk about this client—tell me about your therapeutic approach in working with them. What about this client?

Daily Team Meeting

Listen for how these two clinicians and other team members report on specific psychotherapeutic interventions during their report in the daily team meeting.

ITEM RESPONSE CODING**Rating Guidelines**

Note: These services include group or individual therapeutic approaches that are based on established theory and techniques. Therapies are selected and employed to address a specific set of symptoms or behaviors (e.g., relaxation and exposure therapy for anxiety disorders; CBT for schizophrenia or depression; dialectical behavioral therapy for emotional dysregulation). Psychotherapy sessions are deliberate, tied to clients' goals and written into the client's treatment plan. Ideally, psychotherapy is conducted by a trained therapist, but other staff may be equipped to deliver select therapies given appropriate training and supervision. Psychotherapy services reported here should be reflected across other data sources (e.g., progress notes, treatments plans). MI should not be counted for this item and EP1. Full Responsibility for Integrated Treatment for Co-Occurring Disorders unless the client is receiving MI for both COD and for other areas of their life where they may be in an earlier stage of change readiness (e.g., in contemplation about moving from unsafe housing). Both sets of interventions must be documented separately in the treatment plan.

Rating is guided by a combination of the clinician report on the extent to which there is a team member providing empirically-supported therapy and the number of clients who receive such formal therapy by the team as identified in the Excel spreadsheet. Use the daily team meeting and chart review (document whether psychotherapy interventions were specified in the charts in the Chart Review Notes) to corroborate other data sources. Use Table 29 below to guide rating for this item.

Formula for Criterion #3

$$\frac{\# \text{ of clients who receive deliberate, empirically-supported psychotherapy in the past year}}{\text{Total \# of clients served on the ACT team}} \times 100$$

Table 29. Empirically-Supported Psychotherapy

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: Team deliberately provides individual and/or group psychotherapy, as specified in the treatment plan	Team does not provide any psychotherapy or all psychotherapy is provided "on the fly" with little to no tie to clients' treatment plans.	Data sources provide some evidence that at least one licensed team member is deliberately providing psychotherapy on a regular basis, but this is only evident in a few of those data sources (e.g., examples were reported in staff interviews, but little to no evidence of such observed in the chart review). These sessions are still regularly scheduled with the client to address a problem or advance toward a goal outlined in the treatment plan, where the therapeutic intervention is clearly noted in the plan. Alternatively, the team may not have a licensed therapist, but some team members appear adept at using therapeutic techniques (e.g., CBT) in their work.	Data sources provide strong evidence that at least one team member is deliberately providing psychotherapy on a regular basis, and this person is licensed to provide therapy. Data attesting to this practice is observed in staff interviews, chart reviews, and client/team schedules. Sessions must be regularly scheduled with the client to address a problem or advance toward a goal outlined in the treatment plan, where the therapeutic strategy or strategies are clearly noted in the plan. Alternatively, although there is no licensed therapist on the team, the team is strongly adept at core therapeutic techniques (CBT and MI) and application of these techniques was evident across multiple data sources.

Table 29. Empirically-Supported Psychotherapy

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #2: Team uses empirically-supported techniques to address specific symptoms and behaviors	<p>Team either:</p> <ul style="list-style-type: none"> • does not provide empirically-supported therapy, or • provides examples of only providing therapy that is atheoretical and ill-defined ("supportive counseling") and/or not empirically-supported for this population (e.g., psychodynamic approaches) and/or • demonstrates inappropriate application of techniques (e.g., using person-centered (i.e., Rogerian) therapy to address a phobia or psychosis, which could more effectively be treated with CBT). 	Data sources provide some evidence that team clinicians are adept at delivering empirically-supported psychotherapy for specific symptoms and/or behaviors, but there is a mix of use of atheoretical and/or ill-defined ("supportive counseling") approaches.	Data sources provide enough evidence that team clinicians are adept at delivering empirically-supported psychotherapy for specific symptoms and/or behaviors. Such evidence includes specific and appropriate examples of interventions and the type of symptoms and behaviors addressed, as well as application of resources and/or training in these particular interventions (please see Table 30 for guidance).
Criterion #3: Team maintains an appropriate penetration rate in providing deliberate empirically-supported psychotherapy to clients in need of such services (See Excel spreadsheet column M)	In the past year, less than 25% of clients have received a deliberate, empirically-supported psychotherapeutic intervention.	In the past year, 25-39% of clients have received a deliberate, empirically-supported psychotherapeutic intervention. *Do not credit the team for individuals reported to be receiving empirically-supported psychotherapy when the team is not providing it (no credit on #1 and #2)	In the past year, at least 40% of clients have received a deliberate, empirically-supported psychotherapeutic intervention. *Do not credit the team for individuals reported to be receiving empirically-supported psychotherapy when the team is not providing it (no credit on #1 and #2)

	Trauma Recovery and Empowerment Model (TREM)	<i>Trauma Recovery & Empowerment: A Clinician's Guide to Working with Women in Groups (Harris, 1998)</i>
Early stages of change readiness (not specific to treating a co-occurring disorder when rating this item)	Motivational Interviewing	<i>Motivational Interviewing: Preparing People for Change (Miller & Rollnick, 2002)</i> <i>Motivational Interviewing in the Treatment of Psychological Problems (Arkowitz, Miller, Rollnick, & Westra, 2008)</i>

	1	2	3	4	5
EP7. Empirically-Supported Psychotherapy	Team does not provide psychotherapy to clients. No criteria are met.	1 to 2 criteria are PARTIALLY met.	Criterion #1 is PARTIALLY met and criteria #2 and #3 is at least PARTIALLY met OR Team FULLY meets both criteria #1 and #2, but does not meet criterion #3.	Team FULLY meets criterion #1, PARTIALLY meets criterion #2, and at least PARTIALLY meets criterion #3. OR Team FULLY meets both criteria #1 and #2 and only PARTIALLY meets criterion #3.	Team FULLY meets all 3 criteria.

EP8. Supportive Housing

Definition: The team embraces supportive housing, including: (1) assisting clients in locating housing of their choice (e.g., providing multiple housing options, including integrated housing); (2) respect for clients' privacy within residence; (3) assistance in accessing affordable, safe/decent, and permanent housing; and (4) assured ongoing tenancy rights, regardless of clients' progress or success in ACT services.

Rationale: It is the ACT team's role to work collaboratively with clients to identify and secure safe, affordable, decent housing in the community that provides them with the rights of tenancy under landlord tenant laws. The team provides flexible support and services to help meet clients' needs and preferences in these housing settings. Studies have shown that supportive housing has helped clients progress in recovery and maintain residence in the community.

DATA SOURCES (* denotes primary data source)

Housing Specialist, if available OR Team Leader Interview*

In what kinds of settings are clients living? Do they typically have a choice of where to live or have many options?

[As needed, prompt for types of settings and household composition (families; congregate, supervised, independent settings; group, individual} and range of options the team can offer.

Review entries on Excel spreadsheet (column O) indicating who lives in settings where more than 25% of units/rooms are designated for tenants with a disability or special need. Use these entries to query Team Leader to further distinguish between who appears to be in more congregate vs. integrated settings. Further query about whether clients who live in congregate setting with others with disabilities actually chose to live in that setting, and what is the team doing to help them move into more independent settings. Exclude those in hospitals or jailed, although this information may be of relevance for other items. Make note of residential settings occupied by a majority of individuals with disability/special needs, although these units/rooms are not specifically designated for these groups; may include in qualitative feedback if reflects a prominent agency behavior that may undermine client choice in housing].

Review those indicated as being homeless in column O.

[Randomly select specific clients listed in the Excel spreadsheet who are living in supervised residential settings, see ID reference to access names, and ask:]

Describe what the team is doing with this client around their current residential placement (e.g., did the team help them move in and why, is there current action to help this person move out, and what does that look like?).

What is the team doing to help homeless clients access affordable and safe housing?

Does the team have access to clients' residences, such as having a key? If so, for approximately how many clients? Under what conditions does the team access clients' residences?

[Review entries on Excel spreadsheet (columns P and Q) regarding who is receiving a subsidy, is waitlisted to receive a subsidy, or is paying no more than 30% of income to live in a safe and affordable setting without a subsidy. Make sure that data are accurately entered so that individuals who may be living in affordable, but unsafe, environment are excluded.]

What types of housing subsidies do these individuals receive? What has been the process for assisting clients in accessing housing subsidies?

[Determine whether the team appears to be proactive in assisting clients with accessing subsidies so that they may move into more affordable, and likely safer, independent living residences. Are clients on subsidy waitlists?]

Do any clients live in housing you consider to not be safe or decent (e.g., relatively clean, not in disrepair, does not pose a threat to the client in some way)? If so, which of the clients listed on the spreadsheet?

Do any clients live in housing that is temporary and/or transitional (i.e., there is a limited timeframe for how long they can live there)? If so, which of the clients listed on the spreadsheet?

Do some clients live in residences where the conditions in the lease go beyond what is typical of a common lease, such as including conditions for treatment participation and/or sobriety? [For those with requirements of treatment participation, is it specifically with ACT or any service program? Approximately how many have such contingencies written into the lease? Who was the last client evicted as a result of violating these specific terms of a lease? Query for the team's role in that eviction.]

Client Interview

Tell me a little bit about where you live.

What do you like and not like about it?

[Query for affordability, safety/decency, permanency, whether they live in an integrated or clustered setting, and if there are any requirements of them to remain in treatment or stay sober while living in residence.]

How did you come to live in your

current residence? [Probes: Did you have a choice about where to live? Did the ACT team talk with you about your housing options? Did you have more than one possibility suggested for housing?]

Do you feel like you have the privacy that you want? [If necessary and appropriate, query for whether staff have access to their home.]

How long do you get to stay where you currently live? Have you been told you have to move after a certain amount of time?

Excel spreadsheet*

See Table 31 for specific questions and columns referenced for each criterion.

Chart Review and Daily Team Meeting

Examine charts for information about the nature of clients' residential settings, references to client preferences or other expressions of interests in housing alternatives, and staff access to housing. At the daily team meeting, listen for references to deliberations about housing and residential "placements" and how team members report on or plan for interactions around clients' residential interests.

ITEM RESPONSE CODING

Rating Guidelines

Refer to Table 31 below to determine whether, and to what extent, the team meets these five supportive housing criteria. The assessment of this item is based on the team's approach to assisting clients with housing, regardless of how this approach may be influenced by access to resources and/or policies and procedures external to the ACT team.

Table 31. Estimation of Credit for Four Supportive Housing Practices

Criteria, Definition, and Primary Data Source (marked *):	No Credit	Partial Credit	Full Credit
<p>Criterion #1: Client choice: Clients typically live in housing of their choice (e.g., ideally living in residences typical of the community, without clustering people with disabilities and/or other special needs such as homelessness).</p> <p>DATA SOURCES: Excel spreadsheet (column O) and interview questions*</p> <p>While the team may report in the interview that some clients chose to live in congregate or clustered housing, do not adjust percentage, but note it in the qualitative item-level feedback.</p>	<p>Most clients (at least 70%) live in settings where at least 25% of the units/rooms are designated for tenants who meet disability related and/or special needs (e.g., homelessness) eligibility criteria.</p> <p>OR</p> <p>At least 25% of clients live in settings where at least 75% of the units/rooms are designated for tenant who meets disability related and/or homeless eligibility criteria.</p>	<p>Some clients (26% - 69%) live in settings where at least 25% of the units/rooms are designated for tenant who meet disability related and/or special needs (e.g., homelessness) eligibility criteria.</p>	<p>Few clients (25% or less) live in settings where at least 25% of the units/rooms are designated for tenants who meet disability related and/or special needs (e.g., homelessness) eligibility criteria.</p>
<p>Criterion #2: Privacy: Clients have control over whether and when staff enter their residence.</p>	<p>ACT staff has free access to client residences</p> <p>OR</p> <p>At least 40% of ACT clients are residing in supervised residential environments where privacy may be compromised by way of the living environment itself where there is less choice and freedom.</p>	<p>No partial credit.</p>	<p>ACT staff may not enter the client residence unless client invites them OR if the team has reason to believe the client is in crisis and/or has advanced directives for mental health conditions or other high needs (e.g., serious physical conditions) that require them to have extra support to live independently.</p>

Table 31. Estimation of Credit for Four Supportive Housing Practices

Criteria, Definition, and Primary Data Source (marked *):	No Credit	Partial Credit	Full Credit
<p>Criterion #3: Affordable, safe/decent, and permanent housing: Clients pay a reasonable amount from their income (30% or less) toward their rent or mortgage plus basic utilities, partly as a result of the team's efforts to help them secure housing subsidies and other supports.</p> <p><u>Exclude individuals</u> who are judged to not be in a safe/decent (e.g., not relatively clean, in disrepair) environment or are in temporary/transitional housing, per the team leader/housing specialist and client interviews.</p> <p>DATA SOURCES: Excel spreadsheet (columns P & Q) and client/staff interviews*</p>	<p>Few clients (less than 25%) pay a reasonable amount from their income to live in safe housing.</p>	<p>Some clients (26% - 74%) pay a reasonable amount from their income to live in safe housing.</p>	<p>Most clients (at least 75%) pay a reasonable amount from their income to live in safe housing.</p>
<p>Criterion #4: Tenancy rights: Clients' tenancy is <i>not</i> contingent on their progress or success in ACT services.</p> <p>DATA SOURCES: Excel spreadsheet (column R) and interview Questions*</p> <p>If "no credit" condition is true for more than one individual, then rate "no credit." To rate full credit, there are no instances where client's lease includes conditions related to successful engagement in ACT services (one or two exceptions may be allowed to still receive full credit). It is not uncommon for access to housing subsidies to require such conditions, resulting in no more than partial credit.</p>	<p>Tenancy is revoked based upon noncompliance with ACT services or failure to participate in other rehabilitative/clinical services (e.g., unwillingness to be seen by staff, and/or lack of progress, such as with substance use reduction or medication adherence). <u>Exclude individuals</u> who elected to live in sober living residences to advance their recovery, where such residences often require treatment participation (and sobriety) to remain in residence.</p>	<p>Clients are required to participate in ACT or other rehabilitative/clinical program, but tenancy is not contingent on progress (e.g., obtaining and maintaining sobriety, or adhering to medications).</p>	<p>Tenancy is not contingent in any way upon clients' participation in ACT or other rehabilitative/clinical service program (i.e., tenancy may be contingent on very basic contact with outreach program for the purpose of very minimal monitoring and engagement opportunities).</p>

EP8. Supportive Housing	1	2	3	4	5
	<p>Team meets no more than 1 criterion.</p>	<p>3 criteria PARTIALLY met OR 2 criteria met, at least PARTIALLY.</p>	<p>4 criteria met, with at least 2 PARTIALLY met OR 3 criteria met, with at least 1 criterion FULLY met.</p>	<p>ALL 4 criteria met, with up to 1 criterion PARTIALLY met (remaining 3 criteria are FULLY met).</p>	<p>ALL 4 criteria FULLY met.</p>

PP1. Strengths Inform Treatment Plan

Definition: (1} The team is oriented toward clients' strengths and resources, and (2} clients' strengths and resources inform treatment plan development.

Rationale: Assessment of strengths alone does not necessarily result in strengths-based approaches to services. To ensure that they are applied within practice, it is important for strengths and resources to be transferred from the assessment and carried out within the treatment plan.

DATA SOURCES (* Denotes primary data source}

Chart Review* - Chart Review Log Part II (p. 197-198} and Chart Review Tally Sheet Part II (p.201-202}

Review treatment plans for three or more meaningful and personal strengths and resources identified in the assessment. Also review plans to determine whether strengths inform the plan itself (i.e., identified strengths are thoughtfully used or leveraged in efforts to move toward personal recovery goals or objectives}.

Team Leader Interview*

Does your team routinely assess client strengths and resources? Where would we find these documented?

[Acknowledge areas you may have already identified strengths in documentation.]

How does your team use or apply the strengths and resources that are identified in their work with clients, including how plans are developed?

[Go to Excel spreadsheet and randomly pick 2-3 clients]: ***Tell us a little bit about this client's strengths/resources and how the team is working with that client, given those particular strengths/resources.***

Clinician Interview*

Do you routinely assess client strengths and resources?

How do you use or apply the strengths and resources that are identified in your work with clients? Can you give us some examples?

[If yes:] ***Where would we find that information in the charts?***

ITEM RESPONSE CODING

Rating Guidelines

Use both the interview data and chart review as the primary data sources in rating this item. Use the Chart Review Log Part II at the end of this protocol to identify strengths and resources within the treatment plan. If strengths and resources are not reflected within the treatment plan goals and action steps, do NOT count that chart toward the percentage of charts that incorporate strengths/resources. Please see Table 32 for further guidelines in how to assess whether each criterion was met.

Table 32. Strengths Inform Treatment Plan

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: The team is oriented toward clients' strengths and resources ⁹	The team does not appear to attend to clients' strengths and resources, instead focused on clients' limitations and problems AND/OR	The team variably attends to clients' strengths and resources (evidence was mixed across data sources; limited documentation of strengths/resources)	The team is clearly attentive to clients' strengths and resources, with a process in place for more systematic assessment of strengths and resources (i.e., these attributes were consistently documented in assessments/plans) and orientation to those strengths in day-to-day work with clients is evident. Strengths and resources should include those attributes, skills and qualities that are individual and personal to the client, not simply team-generated strengths regarding the client's progress in treatment, such as medication or treatment adherence.

⁹ Use Chart Review Tally Sheet II or TMACT Calculation Workbook to calculate percentage of charts in which personal strengths and resources are assessed.

Table 32. Strengths Inform Treatment Plan

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
	nearly all strengths or resources identified were team-generated based on the client's response to treatment (e.g., medication compliance, works well with the team}.	was observed} OR some strengths or resources identified were team-generated based on the client's response to treatment (e.g., medication compliance, works well with the team}.	<p>Personal strengths may also include ways in which the client has handled difficult situations or persevered despite difficulties in the past.</p> <p><u>Note:</u> Consider the quality and quality of strengths captured in documentation as well as the perspective and approach of the team, as observed in other data sources (e.g., daily team meetings, team member interviews}.</p>
Criterion #2: Clients' strengths and resources inform treatment plan development ⁹	Very few, if any (less than 29%) of the reviewed treatment plans, clients' strengths and resources were not only assessed, but clearly informed the development of goals, objectives, and/or interventions.	For some (i.e., 30 - 64%) of the reviewed treatment plans, clients' strengths and resources were not only assessed, but clearly informed the development of goals, objectives, and/or interventions.	<p>In at least 65% of the reviewed treatment plans, clients' strengths and resources were not only assessed, but clearly informed the development of goals, objectives, and/or interventions. For example:</p> <p>A client's strength was his artistic abilities and interests. In a goal related to his developing healthy relationships, an objective was to join a local art club that met monthly and integrate that goal into provision of individual IMR.</p> <p>A client's strength was her caretaking of others. To help encourage her developing cooking skills, staff collaboratively developed skills training interventions that involved helping her learn how to cook a weekly dinner for herself and a neighbor friend.</p>

	1	2	3	4	5
PP1. Strengths Inform Treatment Plan	Strengths are not assessed (no criteria #1}.	Team variably attends to clients' strengths and resources and strengths/resources do not inform planning (Partial #1 only}.	<p>Team is clearly attentive to clients' strengths and resources, but clients' strengths and resources do not typically inform plan development (Full #1 and No credit #2}</p> <p>OR</p> <p>Team is variably attentive to strengths and uses this information to inform plans, but less systematically (Partial #1 and Partial #2}.</p>	Team is clearly attentive to clients' strengths and resources, which informed plan development for some (Full #1 and Partial #2}.	Team is highly attentive to clients' strengths and resources, and gathers such information for the purpose of treatment planning (Full #1 and Full #2}.

PP2. Person-Centered Planning

Definition: The team creates treatment plans using a person-centered approach, including:

- (1) Development of formative treatment plan ideas based on initial inquiry and discussion with the client (prior to the formal treatment planning meeting) and with the team, preferable the individual treatment team (ITT);
- (2) Conducting regularly scheduled treatment planning meetings;
- (3) Attendance by *key* staff (i.e., members of the ITT), the client, and anyone else they prefer (e.g., family), tailoring number of participants to fit with the client's preferences;
- (4) Provision of guidance and support to promote self-direction and leadership within the meeting, as needed; and
- (5) Treatment plan is clearly driven by the client's goals and preferences.

Rationale: Person-centered planning involves rethinking the traditional treatment planning process so that it is maximally responsive to an individual's expressed needs, preferences, and rights to self-determination. By planning a central role in planning their own services and goals, clients are empowered to make positive choices in their own lives, both within and outside the mental health system. Research suggests a linkage between person-centered planning, increased medication adherence, and service engagement.

DATA SOURCES (* Denotes primary data source)

Treatment Planning Meeting* - Observation Form (p. 193} and Chart Review Log Part II (p. 197-198} and Chart Review Tally Sheet Part II Tally (p. 201-202}

Observe at least one treatment planning meeting and note elements of person-centered planning.

Chart Review*

Observe the quality and person-centeredness of Person-Centered Plans. Did they appear to result for a person-centered process?

Team Leader Interview

Can you walk us through how the team comes to determine which interventions they will be providing to each client? [Query further to determine how plans come to be created and who is involved in that process, how often it is occurring.]

Clinician Interview

NOTE: For all interview questions pertaining to the treatment planning process, try to reserve these questions for after observation of the treatment planning meeting, if possible, and reflect on observations when posing questions.

How often do treatment planning meetings occur?

What is the process of getting the information you need to inform treatment planning meetings with clients?

***Who typically attends these meetings?
What percentage of clients attends their treatment planning meetings?***

[Ask follow-up questions of how commonly the team uses the model described to you.]

What is the client's role in their treatment planning meetings?

How do you ensure that clients understand what the treatment planning meeting is and their role within their own treatment and this particular meeting?

Peer Specialist Interview	
See previous response to this question in ST8.	
Client Interview	
<p><i>Do you know what your treatment plan (or use the term used by the client or agency) is?</i></p> <p><i>Do you ever attend your treatment planning meetings or meetings with the team?</i></p> <p><i>What are those meetings like for you?</i></p> <p><i>Who typically attends those meetings?</i></p> <p><i>Do you feel like what you're saying is being heard by your team when coming up with your plan?</i></p>	
ITEM RESPONSE CODING	
Rating Guidelines	
<p>Observation of the treatment planning meeting should drive the rating on this item with confirmation of observations with staff interviews (i.e., determine whether what was observed reflected typical practice}. As described in the introduction, it is important to plan for attendance at this meeting ahead of time when you plan your site review. If attendance in the treatment planning meeting isn't possible, ask team members to describe their treatment planning process during your interviews with them and examine treatment plans in the charts to corroborate what you hear from team members.</p> <p>Consider whether the team (esp. client's ITT} appears to use their routine contacts to assess clients' needs and wants, and begin formulating a treatment plan prior to the meeting. Are key team members included in the meeting, or is it just the primary case coordinator or, conversely, the entire team? Is there an effort to help the client take some control and responsibility for directing this meeting?</p> <p>Refer to Table 33 below to determine if criteria are met at all, partially, or fully. If all five elements of ACT person-centered planning are present, rate as a "5."</p>	

Table 33. Person-Centered Planning

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #1: Development of formative treatment plan ideas based on initial inquiry and discussion with the client (prior to the formal treatment planning meeting).	The team does not appear to attend to relevant treatment planning data during their routine contacts with clients prior to the treatment planning meeting. During the treatment planning meeting, there is little reference to what staff already know about the client, as relevant to the new treatment plan.	There appears to be some attention to collecting relevant treatment planning data during routine contacts leading up to the treatment plan meeting with the client, but this is done inconsistently, and/or this information is not used to develop a formative treatment plan to be revised during the meeting with client.	The team uses routine contacts to assess clients' needs and wants, and begin formulating a treatment plan prior to the meeting. Pre-treatment plan meetings (i.e., among ITT members) help team members share and synthesize relevant assessment data. There may be multiple pre-treatment plan meetings like this and they can be very informal with only two or three members of the client's treatment team. By the time of the scheduled treatment planning meeting with the client and natural supports, it is clear that the team has collected some or all of the following information, which may then be used to create a formative plan to be revised during the meeting: <ul style="list-style-type: none"> • Gain feedback on what has worked/not worked as laid out in the treatment plan in the past (if this isn't their initial treatment plan); • Trouble-shoot how to resolve any current concerns with treatment and incorporate them into the treatment plan; and • Get a sense of the client's treatment and recovery goals to develop a formative treatment plan.
Function #2: Conducting regularly scheduled treatment planning meetings.	Treatment planning meetings are typically held more than every six months or not at all.	Treatment planning meetings are held less consistently (sometimes not every six months).	Treatment planning meetings are regularly held, typically at least every six months.
Function #3: Attendance by key staff, the client, and anyone else they prefer, tailoring number of participants to fit with the client's preferences.	Treatment planning meetings routinely do not include members of the treatment team, client, or others the client prefers/requests to participate. It may be the case that the "primary" care coordinator assigned to work with the client completes the plan with the client alone.	Treatment planning meetings less consistently include key members of treatment team, clients, and/or others the client prefers/requests to be in the treatment planning meeting; OR The treatment planning meeting includes all participants named above, but it appears to be an overwhelming experience for clients and is not adapted to fit their experience and preferences. In such cases, sometimes clients may opt out of the treatment planning meeting (i.e., "They don't want to come in and meet with all of us.")	Treatment planning meetings consistently include: <ul style="list-style-type: none"> • Members of the client's ITT; • The client; and • Others the client prefers /requests to be at the meeting (e.g., family, other natural supports). However, if the client prefers to have fewer participants, the number of meeting participants is tailored to those preferences and may include a smaller group.

Table 33. Person-Centered Planning

Function	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Function #4: Provision of guidance and support to promote self-direction and leadership within the meeting, as needed.	There is little to no evidence either within the meeting or outside of the meeting that the team provides coaching and support to clients to promote self-direction and leadership. The client is left to use their own existing skills.	There is some evidence of team guidance and support to promote client self-direction and leadership within the treatment planning meeting, but it appears to be absent at times (e.g., you observe a missed opportunity for guidance when a client is asked how the team can be more helpful in supporting their goal to go back to school and the client just says "I don't know;" the team moves on with what they would like to put in the treatment plan rather than querying more and providing some examples to choose from such as sitting down side-by-side and completing college applications}.	While the treatment team may take an active role in facilitating the treatment planning meeting, the client's voice is heard and reflected and the team actively solicits his or her input throughout. It is clear that the team has either previously provided or currently provides guidance and support to the client within the meeting. Such guidance and support should focus on promoting self-direction and leadership within the meeting and in the client's treatment. Examples include: <ul style="list-style-type: none"> • Education about what the treatment plan is and how it fits with the client's recovery and life goals; • Education and guidance about the client's role in his or her own treatment with the ACT team and how to take an active lead in this process; • Education and guidance about the treatment planning meeting and how to self-advocate and have a more active voice in the process.
Function #5: Treatment plan is clearly driven by the client's goals and preferences and is structured in a manner to inform person-centered practices.	The treatment plan is not person-centered. Goals do not appear to reflect what client's wishes are, and remaining elements of the plan also do not appear to capture the client's preferences. stated in the team's words.	The evidence for the plan being driven by the client's goals and preferences is inconsistent throughout the plan (e.g., the goal appears recovery-centered, but remaining elements of the plan are not clearly person-centered}.	The treatment team does not overly dictate the content of the treatment plan. The client's treatment and recovery goals and preferences (e.g., who they want to work with, what they want to work on} drive the content of the treatment plan, as indicated by the following: <ul style="list-style-type: none"> • Client's goals are stated in their own words, quoted or not; • Client's preferences for treatment are specified (e.g., which team members they'll work with, where they'd like to meet}. • Interventions appear meaningfully tied to the client's stated goals.

	1	2	3	4	5
PP2. Person-Centered Planning	No more than 1 function of person-centered planning is performed OR 2 functions are performed, but not fully.	2 functions of person-centered planning are FULLY performed (3 are absent} OR 3 functions are performed at least PARTIALLY (3 are absent}.	4 functions of person-centered planning are performed (1 absent} OR 5 functions performed, with 3 or more PARTIALLY performed.	ALL 5 functions of person-centered planning are performed, with up to 2 PARTIALLY performed.	ALL 5 functions of person-centered planning are FULLY performed.

PP3. Interventions Target a Broad Range of Life Domains

Definition: The team attends to a range of life domains (e.g., physical health, employment/education, housing satisfaction, legal problems) when planning and implementing interventions. (1) The team specifies interventions that target a range of life domains in treatment plans and (2) these planned interventions are carried out in practice, resulting in a sufficient breadth of services tailored to clients' needs.

Rationale: Pursuit of a range of life goals is essential to recovery and a range of planned interventions are thereby needed to assist clients advance in their recovery. Daily team practices should reflect a breadth of interventions well beyond those typical of basic maintenance and case management (e.g., medication management, money disbursement, and grocery shopping).

DATA SOURCES (* Denotes primary data source)

Daily Team Meeting

Note the services and contacts planned for that day and the extent to which they reflect more than those that are typically clinically-defined (e.g., taking medications, staying out of the hospital, reducing symptoms). Scan Client Daily Log for breadth of services documented as being delivered.

Chart Review* - Chart Review Log Part II (p. 197-198) and Chart Review Tally Sheet Part II (p.201-202)

Review treatment plan goals (in charts) for presence of a diverse range of life areas and respective progress notes to determine if interventions focus on a broad range of life areas.

Weekly Client Schedules*

Review Weekly Client Schedules for planned service contacts and extent to which they focus on a broad range of life goals.

ITEM RESPONSE CODING**Rating Guidelines**

Life domains address more than traditional clinical goals, such as medication management, symptom reduction, and staying out of the hospital. They include: Housing, Finances, Physical Health, Social/Relationships, Employment/Education, Independent Living Skills, Legal, Substance Use, and other areas of personal recovery, including targeted psychotherapy. The focus of PP3 is the planning and delivery of *interventions*, which are intended to result in a behavior/symptom change within these life domains; documentation of observations or commentary (e.g., remarking on client's poor self-care) are not considered implemented interventions, nor are case management tasks (distribution of money, per representative payeeship). Refer to Table 34 to determine if criteria are met at all, partially, or fully.

Table 34. Interventions Target A Broad Range of Life Domains

Criteria	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Criterion #1: Team specifies interventions that target a range of life domains in treatment plans.	Less than 30% of plans reviewed have interventions targeting at least 3 life domains identified above OR less than 65% of plans have interventions targeting at least 2 life domains.	30- 64% of plans reviewed have interventions targeting at least 3 life domains identified above OR at least 65% of plans have interventions targeting at least 2 life domains.	At least 65% of treatment plans reviewed have interventions targeting at least 3 life domains. <u>Life domains</u> address more than traditional clinical goals, such as medication management, symptom reduction, and staying out of the hospital. <u>Note</u> that the focus is on interventions and not <i>goals</i> . Interventions addressing a range of life domains may be subsumed under one particular goal-e.g., an intervention to help client address housing maintenance (so environment is more hospitable to company) may follow a social skills training intervention, both subsumed under a Social/ Relationship goal.
Criterion #2: These planned interventions are carried out in practice, resulting in a sufficient breadth of services tailored to clients' needs.	Less than 30% of charts reviewed document interventions targeting at least 3 life domains identified above OR less than 65% of plans have interventions targeting at least 2 life domains.	Approximately half of all clients (30-64%) receive interventions targeting at least 3 life domains identified above OR at least 65% of plans have interventions targeting at least 2 life domains.	Nearly all clients (65% of charts reviewed) receive interventions targeting at least 3 life domains. <i>Interventions</i> are intended to result in a behavior/symptom change within these life domains; documentation of observations or commentary (e.g., remarking on client's poor self-care) are not considered implemented interventions, nor are case management tasks (distribution of money per representative payeeship).
Alignment (Relevant for differentiating "4" and "5" ratings)	Less than 60% of the charts having some appreciable continuity between planned interventions (criterion #1) and implemented interventions (criterion #2).	No partial credit option.	Alignment is defined as at least 60% of the charts having some appreciable continuity between planned interventions (criterion #1) and implemented interventions (criterion #2). Refer to "C" of PP3 in the Chart Review Tally Sheet Part II (at the end of this protocol) and gauge extent to which there is alignment, which can impact ratings for anchors "4" and "5."

	1	2	3	4	5
PP3. Interventions Target a Broad Range of Life Domains	The team does not plan for and/or deliver interventions that reflect a breadth of life domains.	Team minimally plans for and/or delivers interventions that reflect life domains (PARTIAL credit for one criterion only) OR Team plans for but does not deliver a breadth of services (Full #1 only).	Team plans for and delivers interventions that reflect a breadth of life domains, but less systematically (PARTIAL #1 and PARTIAL #2) OR a larger breadth of services are planned for, but not in turn delivered (FULL #1 and PARTIAL #2).	Team delivers interventions that reflect a range of life domains to all clients (FULL #2), but interventions targeting a breadth of life domains are not systematically specified in treatment plans (PARTIAL #1 OR FULL #1, but lacking Alignment).	Team specifies interventions that target a range of life domains in treatment plans and these interventions are carried out in practice (FULL criteria #1 and #2 with Alignment).

PP4. Client Self-Determination and Independence

Definition: The team promotes clients' independence and self-determination by: (1} helping clients develop greater awareness of meaningful choices available to them; (2} honoring day-to-day choices, as appropriate; and (3} teaching clients the skills required for independent functioning. The team recognizes the varying needs and functioning levels of clients; level of oversight and care is commensurate with need in light of the goal of enhancing self-determination.

Rationale: ACT teams serve many individuals who, due to their psychiatric symptoms and cognitive impairments, need greater direction and oversight to help them remain safe in the community. This higher level of involvement in clients' lives may increase the team's potential for engaging in paternalistic and possible coercive interventions. It is important that teams appropriately balance interventions aimed to manage risks against interventions aimed to help clients direct and manage their own lives. Clients' needs for oversight and supervision from the team will vary and it is important that level of services is consistent with functioning and need. Areas of particular risk of excessive supervision include medications and money.

DATA SOURCES (* Denotes primary data source}

Client Interview

Do you have any examples where a team member has worked with you to learn a new skill that helps you be more independent, such as a cooking skill, cleaning skill, or social skill?

Do you ever feel like the ACT team tells you what to do—maybe being too directive with you? If yes, ask for examples [possible categories: what to wear, what to eat, whether and when to take medications, when to awake and go to bed, upkeep of residence, how to spend time during the day, where to work].

Is the team your representative payee? If so, how often do they give you money? Do you feel like it is up to you how to spend your money? Do they ever tell you how to spend your money?

<p><i>Does the team watch you take your medications? How often? Do you like how often they do this or do you think it is too often or not often enough?</i></p>	
<p>Direct Observation of Services</p>	
<p>Observe the language staff use with the client. Attend to the degree to which staff is directive with client. How respectful our staff with client, especially when in client's natural environment. Do staff take liberties when in client's personal environment (e.g., looking in refrigerator without permission}. In general, to what degree do staff oversee the day-to-day activities of clients (e.g., what to wear, eat, do that day, etc.)? Does the level of supervision appear appropriate given client's level of functioning?</p>	
<p>Daily Team Meeting</p>	
<p>Observe the language used about clients in the daily team meeting. Note whether previous or planned contacts are directive in nature. Table 35 provides examples of language that reflects more direction and supervision vs. language that reflects greater promotion of independence and choice.</p>	
<p>Team Leader Interview</p>	
<p><i>Could you give me an example of how the team has helped a client weigh options to make a more informed choice or decision, even if some options were less desirable from the team's perspective?</i> [Consider the meaningfulness of the choices described in these examples, as well as the team's role in helping client in the decision-making process. Examples of more meaningful choices would include deciding whether to attend a family functioning when there as a history of significant discord, or whether to discontinue taking a particular antipsychotic medication that has helped control many problematic symptoms, but has too many intolerable side effects. An example of a less meaningful choice includes deciding whether to have the team come out to see them in the morning or afternoon for medication supports.]</p>	

Can you think of any examples where the team has intentionally withheld information from a client for the purposes of steering them toward a decision or behavior? [If yes] Can you tell me more about those instances?

[If 1 or more endorsed as having the agency or team as the representative payee:] ***I see from your report on the Excel spreadsheet (column T) that ____ clients have the agency or team assigned as their representative payee. Describe how clients come to have the team or agency as their representative payee.*** [An excessive number of clients with the team or agency as the payee may reflect a practice driven more by policy or orientation toward supervision of client behaviors rather than client needs. One study of ACT teams found that, on average, teams, or administrating agencies, served in the role of representative payee for 47% of the caseload, which can serve as a guide to judge excessive use of payeeship.] Also note what role the team plays in managing money allocation decisions when an agency external to the team serves as the representative payee for clients.]

Can you give an example of the last client that regained their own payeeship or someone the team has been working with to eventually become their own payee?

Can you describe the last client the team helped move from a supervised setting to more independent setting? When was that and what types of supports were provided upon their move?

Excel spreadsheet - (columns S, T, U, V, W)

How many clients are on involuntary commitment or conditional release?

Note the number of clients on payeeship and the extent to which the agency or team is the payee.

How many clients are on guardianship?

Note the number of clients for whom the team directly manages oral medications, as well as the number of an antipsychotic depot injection.

Although some clients make an informed decision to receive depot injections due to greater convenience and improved efficacy, some clients do not. Depot injections can be considered coercive and intrusive by some clients, and historically have been used with clients considered more resistant to taking oral medications. However, it is important to weigh rate information on the use of depot injections with what is learned in CT4 on the use of shared decision-making model.

ITEM RESPONSE CODING

Rating Guidelines

This item is largely impressionistic, although the impressions are informed by several data sources. Refer to Table 36 below to determine if criteria are met at all, partially, or fully. To be rated as a "5" on this item, the team, as a whole, appears to promote client independence and self-determination by helping clients develop greater awareness of meaningful choices available to them, honoring day-to-day choices, as appropriate, and teaching clients the skills required for independent functioning. ACT teams typically serve some clients who are in need of close oversight and more direction given functional/cognitive impairments secondary to their illness, but the team uses good clinical judgment to assure that the **level of direction and oversight is commensurate with the needs of the client and the team works hard to promote client's self-determination.**

Teams score lower on this item if they provide greater supervision and oversight that appear to be disproportionate to client needs. These teams tend to shy away from allowing clients to make their own mistakes or make daily choices that depart from what the team considers best. Also, with teams that do not embrace and prioritize the value of promoting client self-determination and independence, supervisory practices tend to be more universal, rather than individualized given unique needs and functioning impairments, resulting in a higher overall use of these practices. Conversely, teams may score lower on this item if they provide little in terms of proactive interventions intended to further develop clients' self-determination and independence; these teams may be providing very little guidance, both in practical skill-building and in imparting important information to expand clients' choices.

Table 35. Examples of Directive vs. Independence-Promoting Language

Directive language	Independence-promoting language
"Joan was wearing her slippers again when I showed up yesterday. I told her she needed to put on real shoes or else I wouldn't be able to take her to the store."	"Joan was wearing her slippers again yesterday. I reminded her of the shoes she just bought and asked if she'd be willing to try them out as we headed to the store —just so we could see what she likes and doesn't like about them."
"Let's start swinging by Joe's house at 7:30 a.m. for his daily meds. That way, we can make sure he is getting up and not sleeping away his morning."	"Joe's always asleep when we arrive around 10 a.m. Let's ask him if he'd like us to show up earlier to help him start his day, at least two days a week. We should find out why he is staying in bed so late -- drowsiness, depression, no incentives to get out of bed? Maybe a simple coffee maker with a timer would do the trick."

Table 36. Client Self-Determination and Independence

Practice	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
Practice #1: helping clients develop greater awareness of meaningful choices available to them;	Team does not help clients develop a greater awareness of meaningful options and choices available to them; OR were observed (on several occasions) to purposely withhold information that would allow clients to make more meaningful choices, possibly for the purpose of directing behaviors.	There is <i>significant</i> variability across staff and/or clients in the extent to which the team helps clients develop a greater awareness of meaningful choices available to them (e.g., few relevant examples were provided, and/or examples of the team not taking the time to educate clients about options and choices were observed}.	Team routinely assists clients in having a better awareness and understanding of their options to facilitate more informed decision-making. <u>Example observations:</u> Team leader easily generates solid examples of the team imparting information to help clients consider options and make choices in their lives: <ul style="list-style-type: none"> • One such decision was about a client's living circumstances and whether to remain living in a more affordable apartment with an abusive partner or move to less affordable housing without the abusive partner. • Another decision was about a client's plans to continue working with the team in light of an expiring involuntary commitment order. • Evaluators observed example of the team discussing a client whose ongoing substance use was creating financial problems; the team intended to sit down with the client and representative payee to draft three budget options that may or may not entail changes in current behaviors/living arrangements.
Practice #2: honoring day-to-day choices, as appropriate;	Team is largely unaware of the daily lives of most clients, thereby missing opportunity for respectful and therapeutic interventions; OR team tends to micromanage many of clients' day-to-day activities, likely because the team	There is <i>significant</i> variability across staff and/or clients in the degree to which day-to-day choices are honored. For example, team was generally observed to be respectful of clients' choices, but have taken an excessively hard stance	Team respects clients' decisions around day-to-day activities, including when to awake and go to sleep, what to eat, what to wear, how household is maintained, and with whom to associate. Maladaptive day-to-day behaviors may be addressed in a very respectful and therapeutic manner (e.g., teaching clients the importance of food safety and ridding refrigerator of spoiled food; selection of

Table 36. Client Self-Determination and Independence

Practice	Examples/Guidelines		
	No Credit	Partial Credit	Full Credit
	believes such a high level of direction benefits clients.	against clients who smoke cigarettes, often leveraging access to resources against abstinence from nicotine.	clothing that does not put self at risk of unwanted overtures or assault}. <u>NOTE:</u> The team is assumed to meet this criterion unless data suggest otherwise—i.e., team appears to be more directive in day-to-day living decisions and behaviors, or largely unaware of such decisions/behaviors.
Practice #3: teaching clients the skills required for independent functioning. Team recognizes the varying needs and functioning levels of clients; level of oversight and care is commensurate with need in light of the goal of enhancing self-determination.	Team provides little oversight, direction, and skill-building to promote more independence; OR team tends to "do for" clients and/or supervise behaviors (e.g., management of money, medication adherence, substance use, which includes excessive use of urine drug screens across clients) to avoid deleterious consequences.	There is <i>significant</i> variability across staff and/or clients in efforts to help clients develop independent living skills, thereby reducing dependence on the team. Some clients may have been observed as having more excessive oversight with minimal skill-building.	Team strives to help clients learn how to manage their lives by teaching them necessary life skills, thereby limiting the need for the team to supervise various areas of clients' lives.

	1	2	3	4	5
PP4. Client Self-Determination & Independence	None of the 3 practices are employed OR only 1 is employed (FULLY or PARTIALLY).	2 practices are employed (FULLY or PARTIALLY), with 1 absent.	3 practices are employed, with 2 to 3 PARTIALLY.	Team generally promotes clients' self-determination and independence. All 3 practices are employed, but 1 PARTIALLY employed.	Team is a strong advocate for clients' self-determination and independence. All 3 practices FULLY employed.

Additional Data Collection Forms
DAILY TEAM MEETING OBSERVATION FORM

ACT Team:	
Team leader:	Date:
Reviewer:	

Fidelity Scale Item	Reviewer Notes
<p><u>OS3. Daily Team Meeting: Frequency & Attendance</u></p> <p>The team meets on a daily basis and all team members scheduled for that shift normally attend to review and plan service contacts with each client.</p>	<p><i>Note team members present at observed daily team meeting:</i></p>
<p><u>OS4. Daily Team Meeting (Quality)</u></p> <p>Team uses its daily team meeting to: (1} Conduct a brief, but clinically-relevant review of all clients & contacts in the past 24 hours AND (2} record status of all clients. Team develops a daily staff schedule for the day's contacts based on: (3} Weekly Client Schedules, (4} emerging needs, AND (5} need for proactive contacts to prevent future crises; (6} team members are held accountable for follow-through.</p>	<p><i>Note tools used in daily team meeting and the quality of these tools. Does the team use a weekly client schedule to develop a daily staff schedule that is referred to within the meeting? Is someone documenting clients' status and contacts over the past 24 hours?</i></p>

Fidelity Scale Item	Reviewer Notes
<p><u>OS2. Team Approach</u></p> <p>ACT staff work as a transdisciplinary team rather than as individual practitioners; ACT staff know and work with all clients. The entire team shares responsibility for each client; each clinician contributes expertise as appropriate.</p>	<p><i>Observe how staff are scheduled to visit clients. Ideally, staff assignments will vary naturally as a consequence of scheduling daily services to meet the individual needs of each client; however, the team should also make an effort to diversify the staff scheduling to foster ongoing relationships between each client and several team members.</i></p>
<p><u>CP2. Assertive Engagement Mechanisms</u></p> <p>The team uses an array of techniques to engage difficult-to-treat clients. These techniques include: (1} collaborative, motivational interventions to engage clients and build intrinsic motivation for receiving services from the team, and, where necessary, (2} therapeutic limit-setting interventions to create extrinsic motivation for receiving services deemed necessary to prevent harm to client or others. When therapeutic limit-setting interventions are used, there is a focus on instilling autonomy as quickly as possible. In addition to being proficient in a range of engagement interventions, (3} the team has a thoughtful process for identifying the need for assertive engagement, measuring the effectiveness of chosen techniques, and modifying approach when indicated.</p>	<p><i>Listen for clients staffed during team meeting who appear to be difficult to engage.</i></p> <p><i>Does the team set aside time to plan for how to work with these clients, even if this meeting occurs outside the daily team meeting?</i></p> <p><i>Does the team sound exceptionally heavy-handed in how they engage clients?</i></p>

Fidelity Scale Item	Reviewer Notes
<p><u>EP6. Engagement & Psychoeducation with Natural Supports</u></p> <p>The FULL TEAM works in partnership with clients' natural supports. As part of their active engagement of natural supports, the team:</p> <p>(1) Provides education about their loved one's illness;</p> <p>(2) Teaches problem-solving strategies for difficulties caused by illness; and</p> <p>(3) Provides &/or connects natural supports with social & support groups.</p>	<p><i>Listen for team members reporting on contacts with family and other natural supports. Do they reflect education, problem-solving strategies, and/or general support?</i></p>
<p><u>EP7. Empirically-Supported Psychotherapy</u></p> <p>The team:</p> <p>(1) deliberately provides individual and/or group psychotherapy, as specified in the treatment plan;</p> <p>(2) uses empirically-supported techniques to address specific symptoms and behaviors; and</p> <p>(3) maintains an appropriate penetration rate in providing deliberate empirically-supported psychotherapy to clients in need of such services. Ideally, psychotherapy is conducted by a trained therapist.</p>	<p><i>Note whether team mental health therapists/clinicians identified report on specific psychotherapeutic techniques they are using with clients. Listen for any other team members who report on similar psychotherapy contacts.</i></p>
<p><u>PP3. Interventions Target a Broad Range of Life Domains</u></p> <p>The team attends to a range of life domains (e.g., physical health, employment/ education, housing satisfaction, legal problems etc.) when planning and implementing interventions.</p> <p>(1) The team specifies interventions that target a range of life domains in person-centered plans, and</p> <p>(2) these planned interventions are carried out in practice, resulting in a sufficient breadth of services tailored to clients' needs.</p>	<p><i>Note the services and contacts planned for that day and the extent to which they reflect more than those typically clinically-defined (e.g., taking medications).</i></p>

Fidelity Scale Item	Reviewer Notes
<p><u>PP4. Client Self-Determination and Independence</u></p> <p>The team promotes clients' independence and self-determination by:</p> <ul style="list-style-type: none">(1) helping clients develop greater awareness of meaningful choices available to them;(2) honoring day-to-day choices, as appropriate; and(3) teaching clients the skills required for independent functioning. <p>The team recognizes the varying needs and functioning levels of clients; level of oversight and care is commensurate with need in light of the goal of enhancing self-determination.</p>	<p><i>Observe the language used about clients in the daily team meeting. Note whether previous or planned contacts are directive in nature.</i></p>

ACT TREATMENT PLANNING MEETING OBSERVATION FORM

Program:	Date:
Reviewer:	

Fidelity Scale Item	Reviewer Notes
<p><u>PP2. Person-Centered Planning</u></p> <p>The team conducts treatment planning according to the ACT model using a person-centered approach, including:</p> <p>(1) development of formative treatment plan ideas based on initial inquiry and discussion with the client (prior to the formal treatment planning meeting);</p> <p>(2) conducting regularly scheduled treatment planning meetings;</p> <p>(3) attendance by key staff, the client, and anyone else they prefer (e.g., family), tailoring number of participants to fit with the client's preferences;</p> <p>(4) provision of guidance and support to promote self-direction and leadership within the meeting, as needed. For teams that use an ITT, treatment planning meetings should include members from this group.</p> <p>(5) treatment plan is clearly driven by the client's goals and preferences and is structured in a manner to inform person-centered practices.</p>	

Other items to consider:

- How are strengths elicited and used during the development or revision of the treatment plan?
- If natural supports are not present, inquire into the reason behind their absence following the meeting.
- Did the team develop a weekly client schedule with the client during this treatment planning meeting, revise an existing weekly client schedule, or make a plan to meet to develop/revise a weekly client schedule that captures the changes to the treatment plan?
- Based on the assessment and chart information, were appropriate team members present at the meeting?

COMMUNITY VISIT OBSERVATION FORM

Program:	Date:
Reviewer:	

Fidelity Scale Item	Reviewer Notes
<p><u>PP4. Client Self-Determination & Independence</u></p> <p>The team promotes clients' independence and self-determination by:</p> <p>(1) helping clients develop greater awareness of meaningful choices available to them;</p> <p>(2) honoring day-to-day choices, as appropriate; and</p> <p>(3) teaching clients the skills required for independent functioning. The team recognizes the varying needs and functioning levels of clients; level of oversight and care is commensurate with need in light of the goal of enhancing self-determination.</p> <p>Observe the language staff use with the client. Attend to the degree to which staff is directive with client. How respectful are staff with client, especially when in client's natural environment?</p> <p>Do staff take liberties when in client's personal environment (e.g., looking in refrigerator without permission)?</p> <p>In general, to what degree do staff oversee the day-to-day activities of clients (e.g., what to wear, eat, do that day, etc.)?</p> <p>Does the level of supervision appear appropriate given client's level of functioning?</p>	

Other areas to look out for:

- Evaluate both the type and quality of services provided.
 - Do they employ psychiatric rehabilitation or case management? Is the type of service appropriate for this/these particular client(s)?
 - How well are they providing other clinical services such as psychotherapy?
 - What is the quality of the integrated treatment for COD, EE, or wellness services delivered?

Team Name: _____ Reviewer Name: _____ Selected 4-Week Period for Review: _____

Unique Client ID: _____ PSYCHIATRIC DIAGNOSES: _____ OS6. Diagnoses Fit with ACT admission criteria? Yes No

DATE	Contact Location C = Community I = Institution ¹ O = Office (CP1)	Team member/ Role (OS2)	Duration (min.) (CP3)	Briefly note content and quality of contact. Do not include contact attempts or contacts with collaterals in final tally, but information may be useful to track. Refer to CP1, CP3, and CP4 item guidelines to determine when to exclude a contact due to its questionable purpose and/or whether to collapse with another contact made on the same day.

Did Team say client is receiving this service from the team in Excel Spreadsheet?	Is this service reported in progress note? (if not, mark "no") If yes, distinguish the quality of the service (e.g., a high-quality service example is relatively detailed, reflects an active intervention, and generally in-line with the EBP; if the example practice is clearly misaligned with the EBP, also mark as "No" rather than as "low quality.")	If yes, does service appear to be systematically provided ² in concordance with the definition of each service?		
<input type="checkbox"/> Yes	Integrated Treatment for Co-Occurring Disorders (Column B):	<input type="checkbox"/> Yes/High	<input type="checkbox"/> Yes/Low	<input type="checkbox"/> No

Other Assessments Observed (e.g., Nursing, Functional Skill Assessment, Violence Risk Assessment):
OS4. Daily Team Meeting: Client Schedules (criterion #3). Examine whether the client schedule serve as a functional bridge between plans and what is being delivered. Summarize what is observed - are they formatted so that they can be shared with the client; are they organized by week or month; what level of detail is included in who (staff), when (day, even time of day), and why (intervention) the client is being seen?			

PP1. Strengths Inform Planning				CP6. Crisis Planning
Rate the extent to which documented strengths and resources are both personal and rich in quality: ¹ <input type="checkbox"/> Poor <input type="checkbox"/> Moderate <input type="checkbox"/> Good <input type="checkbox"/> No Strengths Assessed	List examples of documented strengths and resources:	Do you see evidence of strengths and resources <u>informing</u> the development of action steps and/or interventions within the plan itself? (e.g., if a person is noted to be artistic, is there deliberate effort to draw upon this when addressing other needs or challenges in the plan?) <input type="checkbox"/> Yes <input type="checkbox"/> No	(If Marked "Yes" in previous column:) List examples of how strengths/resources informed planning:	How well does the crisis plan appear to capture <u>practical</u> and <u>individualized</u> crisis planning information, including signs of increased distress or illness, options for how to best address emerging crisis? <input type="checkbox"/> Poor <input type="checkbox"/> Moderate <input type="checkbox"/> Good <input type="checkbox"/> No Crisis Plan
PP2. Person-Centered Planning				
Two most recent plan dates: <hr/> <hr/> Revisions or Addendum Dates: <hr/>	Write down example Recovery or Long-Term goal from this plan	Write down example Short-Term goals/Objectives from this plan	Indicate other observations of the plan itself, such as the overall flow of the plan -- do interventions relate (upstream) to objectives/goals? Do objectives/short-term goals logically relate to the long-term/recovery goal? Are interventions personalized, relatively specific, and reflect what the team is going to do (not the client)? Do the plans appear to follow from a person-centered process?	
PP3. Interventions Target a Broad Range of Life Domains. Assess the extent to which planned and delivered interventions target a broad range of life domains. We are interested in life domains other than medication management and symptom monitoring. For criterion A, refer to planned interventions not the goals. For criterion B, do not include documented passive observations, such as "presented with poor hygiene," as an intervention.				
Life Domains:	PP3. Criterion A	PP3. Criterion B	PP3. Criterion C	
1} Distressing symptoms and/or challenging behaviors addressed by psychotherapy 2} Employment and Education 3} Healthcare management and prevention (this includes dental) 4} Housing access and resources 5} Family Relationships 6} Finances/Budgeting 7} Functional daily living skills - household maintenance 8} Functional daily living skills - self-care (e.g., grooming, hygiene) 9} Functional daily living skills—social/interpersonal skills, leisure, and/or mobility 10} Legal aid and supports 11} Psychoeducation for symptom management 12} Relapse prevention for mental health symptoms (using WMR) 13} Substance use	Life domains that were addressed with a planned <u>intervention in the person-centered plan</u> (list numbers from previous column):	Life domains that were addressed with an intervention, per the reviewed <u>progress notes</u> (list numbers from previous column):	Are at least 50% of the planned interventions (A) present in delivered interventions (B), indicating alignment?" <input type="checkbox"/> Yes <input type="checkbox"/> No	

¹ "Good quality" examples would list at least eight personal strengths, e.g., has a great sense of humor, is attentive to details, completed High School, has a supportive family, takes good care of her dog. "Good patient" attributes, such as "engaged in treatment and takes medications," should not receive credit.

EP3. WMR Services						
EP7. Psychotherapy**						
CT7. Health						

¹For CT4, examine the timespan between the last two provider face-to-face contacts and consider the appropriate rating: if the timespan is more than 3 months, code it as a "3" (3+ months); if between 7 weeks up to 3 months, code as a "2," and if 6 weeks or less, code as a "1."

Also consider the timespan between the date of the TMACT review and the most recent face-to face contact. If there is significant lapse of time without a documented contact (more than 3 months), adjust the code to a "3" (see examples F and G in the following Table, where the timespans were within 2 months and within 6 weeks, respectively, but the most recent date as more than 3 months ago).

Ex.	Evaluation Date	Most Recent Psych Provider F-to-F Note Date	2 nd Most Recent Psych Provider Note Date	Coding

	Peer Spec 2:			

Cross-walk reported and observed time spent in specialist services (e.g., what percent of progress note entries by co-occurring disorders specialist have some notation of integrated treatment for co-occurring disorders, inclusive of assessment and engagement, which may not be overtly documented?).

Significant discrepancies may warrant an adjustment from what was reported given what was observed in the chart (e.g., specialist reports 90%, and chart review data finds only 50%; with this example, and depending on what other data sources indicate (e.g., scheduling practices), reducing to 70% may be a more accurate reflection of how the specialist is used in his or her role. As you only have data from a 20% sample and lack information to know how representative the dataset is for that given specialist, use chart data judiciously when adjusting reported percentages, and consider other sources (team scheduling practices, overall competency of specialist (if they clearly do not understand their area of specialty, it is more difficult to make a case that they are used in their specialty role, many observed missed opportunities to use the specialist)

APPENDIX BB

Assertive Community Treatment
Approval Process
March 2018

<h1>ACF</h1> <p>Administration for Children and Families</p>	U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES Administration on Children, Youth and Families	
	1. Log No: ACYF-CB-IM-14-03	2. Issuance Date: October 23, 2014
	3. Originating Office: Children's Bureau	
	4. Key Words: Preventing Sex Trafficking and Strengthening Families Act, Title IV-E Plans, Trafficking, APPLA, AFCARS, Family Connections Grants, Adoption and Guardianship Incentives	

INFORMATION MEMORANDUM

TO: State, Tribal and Territorial Agencies Administering or Supervising the Administration of Title IV-E and/or Title IV-B of the Social Security Act

SUBJECT: NEW LEGISLATION - Public Law 113-183, the Preventing Sex Trafficking and Strengthening Families Act

LEGAL AND RELATED REFERENCES: Titles IV-B, IV-E, and section 1114A of the Social Security Act (the Act) as amended by Public Law 113-183, enacted September 29, 2014

PURPOSE: To inform states and Tribes of the enactment of the Preventing Sex Trafficking and Strengthening Families Act and provide basic information on the new law, including title IV-E plan changes, new case plan requirements and definitions, additions to the Adoption and Foster Care Analysis and Reporting System (AFCARS), modifications to the Family Connection grants, Chafee program, and reauthorization of the Adoption and Guardianship Incentive Program.

INFORMATION: The President signed the Preventing Sex Trafficking and Strengthening Families Act, Public Law (P.L. 113-183) into law on September 29, 2014. The law amends the title IV-E foster care program to address trafficking, limits another planned permanency living arrangement (APPLA) as a plan for youth, and reauthorizes and amends Family Connections Grants and the Adoption Incentives Program. Some of the major changes are described below (please refer to the attached law for the complete amendments).

Family Connection Grants Program

- Reauthorizes family connection grants at the current authorization level of \$15 million for 2014 under section 427 of the Social Security Act.
- Permits HHS to make family connection grants available to institutions of higher education.
- No longer requires the Secretary to reserve \$5 million each fiscal year for kinship navigator programs.
- These provisions are effective as if P.L. 113-183 was enacted on October 1, 2013.

Title IV-E requirements for identifying, reporting and determining services to victims of sex trafficking

- Modifies existing or adds new title IV-E plan requirements that apply to state and tribal title IV-E agencies as follows:
 - Modifies section 471(a)(9) to require that:
 - within 1 year of enactment (by September 29, 2015), title IV-E agencies must demonstrate that they have: 1) consulted with other specified agencies having experience with at risk youth and; 2) developed policies and procedures (including caseworker training) to identify, document, and determine appropriate services for:
 - Any child or youth in the placement, care or supervision of the title IV-E agency who is at-risk of becoming a sex trafficking victim or who is a sex trafficking victim (including those not removed from home; those who have run away from foster care and under age 18 or such higher age elected under 475(8); and youth not in foster care who are receiving services under the Chafee Foster Care Independence program (CFCIP) (477)), and at the option of the agency, youth under age 26 who were or were never in foster care. (471(a)(9)(C)(i)¹)
 - within 2 years of enactment (by September 29, 2016), title IV-E agencies must demonstrate that they are implementing these policies and procedures. (471(a)(9)(C)(ii))
 - Adds a new title IV-E plan requirement at 471(a)(34) that title IV-E agencies must:
 - Report immediately (no later than 24 hours) to law enforcement children or youth described under 471(a)(9)(C)(i)(I) who the agency identifies as being a sex trafficking victim. (Must begin within 2 years of enactment (by September 29, 2016)).
 - Report annually to HHS the total number of children and youth described under 471(a)(9)(C)(i)(I) who are sex trafficking victims. (Must begin within 3 years of enactment (by September 29, 2017)).
 - Adds a new title IV-E plan requirement at 471(a)(35) that requires:
 - 1) within 1 year of enactment (by September 29, 2015), title IV-E agencies to develop and implement protocols to:
 - locate children missing from foster care,
 - determine the factors that lead to the child's being absent from foster care and to the extent possible address those factors in subsequent placements,
 - determine the child's experiences while absent from care, including whether the child is a sex trafficking victim, and
 - report related information as required by HHS. (471(a)(35)(A))
 - 2) within 2 years of enactment (by September 29, 2016), title IV-E agencies to develop and implement protocols to report children or youth described under 471(a)(9)(C)(i)(I) immediately (no later than 24 hours after receiving information) on missing or abducted children to law enforcement for entry into the National Crime Information Center (NCIC) database. (471(a)(35)(B))
- HHS must report to Congress the number of children and youth reported by title IV-E agencies as sex trafficking victims, within 4 years of enactment (by September 29, 2018) and annually thereafter. (471(d))

¹ All citations are to the SSA as amended by P.L. 113-183.

- Defines “sex trafficking victim” in section 475(9) of the Act as a victim of sex trafficking (as defined in section 103(10) of the Trafficking Victims Protection Act of 2000)² or a severe form of trafficking in persons (described in section 103(9)(A) of the Trafficking Victims Protection Act of 2000).³

Title IV-E requirements related to the reasonable and prudent parent standard and developmentally appropriate activities for children in foster care

- Modifies the existing title IV-E plan requirement at 471(a)(10) requiring state and tribal licensing authorities to: permit the use of the “reasonable and prudent parenting standard” as defined in section 475(10)⁴ in their standards for foster family homes and child care institutions; require child care institutions to have an on-site official authorized to apply the reasonable and prudent parent standard; and have policies for foster parents and private entities (under contract) applying the reasonable and prudent parent standard to ensure appropriate caregiver liability when approving an activity for a foster youth. Each child care institution’s authorized official must have the same training on the “reasonable and prudent parent standard” as required under section 471(a)(24) of the Act for foster parents.
- Amends the existing title IV-E requirement at section 471(a)(24) of the Act to require title IV-E agencies to certify that foster parents have skills and knowledge on the “reasonable and prudent parent standard”.
- HHS must provide technical assistance on best practices for strategies to assist foster parents in applying the reasonable and prudent parent standard, while allowing children to participate in normal and beneficial activities (section 111(a)(3) of P. L. 113-183).
- These provisions are effective 1 year after enactment (September 29, 2015) unless a delayed effective date is approved. A limited period of delay is permitted when the Secretary of the U.S. Department of Health and Human Services determines that legislation (other than legislation appropriating funds) is required for a title IV-E agency to comply with the plan requirements under title IV-E of the Act imposed by the amendment. The “delayed effective date” is defined as the 1st day of the 1st calendar quarter after the 1st regular session of the state legislature or tribal governing body after enactment. If the state/Tribe has a 2-year legislative session, each year of the session is deemed to be a separate regular session of the legislature.⁵

Adds new title IV-E/IV-B case plan and case review system requirements for youth with a plan of APPLA and children over age 14

- Modifies the title IV-E plan at section 471(a)(16) and title IV-B plan at 422(b)(8) of the Act with new requirements for agencies to modify their case review system (in section 475(5) of the Act) as follows:
 - Limits APPLA as a permanency plan for youth age 16 and older (section 475(5)(C)(i) of the Act).

² Section 103(10) of TVPA: Sex trafficking: The term “sex trafficking” means the recruitment, harboring, transportation, provision, or obtaining of a person for the purpose of a commercial sex act.

³ Section 103(9)(A) of TVPA: Severe forms of trafficking in persons: The term “severe forms of trafficking in persons” means—(A) sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age.

⁴ “Reasonable and prudent parent standard” is defined as the standard characterized by careful and sensible parental decisions that maintain a child’s health, safety, and best interests while at the same time encouraging the child’s emotional and developmental growth, that a caregiver must use when determining whether to allow a child in foster care under the responsibility of the state/Tribe to participate in extracurricular, enrichment, and social activities. Caregiver (for this purpose only), is a foster parent or designated official at a child care institution.

⁵ This means, for example, that ACF may approve a delayed effective date of 10/1/2015 (for this provision) when the 1st regular legislative session that is held after September 29, 2014 closes between July 1, 2015 and September 30, 2015.

- Requires title IV-E agencies to follow additional case review and case plan requirements in sections 475A, 475(5)(B), and (C)(i) of the Act for all children in foster care with a permanency plan of APPLA including that the title IV-E agency must:
 - Document at each permanency hearing the efforts to place a child permanently with a parent, relative, or in a guardianship or adoptive placement (sections 475(5)(C)(i) and 475A(A)(1) of the Act).
 - Implement procedures to ensure that the court or administrative body conducting the permanency hearing asks the child about his/her desired permanency outcome and makes a judicial determination at each permanency hearing that APPLA is the best permanency plan for the child and compelling reasons why it's not in the best interest of the child to be placed permanently with a parent, relative, or in a guardianship or adoptive placement (section 475A(a)(2) of the Act).
 - Document at the permanency hearing and the 6 month periodic review the steps the agency is taking to ensure that the foster family follows the “reasonable and prudent parent standard” and whether the child has regular opportunities to engage in “age or developmentally-appropriate activities” (sections 475(5)(B) 475A(a)(3) of the Act).
- Defines “age or developmentally-appropriate” as suitable, developmentally appropriate activities for children of a certain age or maturity level based on the capacities typical for the age group and the individual child (section 475(11) of the Act).
- For children age 14 and older:
 - The case plan must document the child’s education, health, visitation, and court participation rights, the right to receive a credit report annually, and a signed acknowledgement that the child was provided these rights and that they were explained in an age appropriate way (section 475A of the Act),
 - The case plan must be developed in consultation with the child, and at the option of the child, 2 members of the case planning team, who are not the caseworker or foster parent (sections 475(1)(B) and (5)(C)(iv) of the Act),
 - The case plan and permanency hearing must describe the services to help the youth transition to successful adulthood (formerly at age 16) (sections 475(1)(D) and (5)(C)(i) of the Act),
 - The title IV-B/IV-E agency must provide a copy of his/her credit report annually and assistance in fixing any inaccuracies (formerly age 16) (section 475(I) of the Act).
- These provisions are effective 1 year after enactment (September 29, 2015). Title IV-E/IV-B Tribes have 3 years to implement the limit on APPLA as a permanency plan for youth age 16 and older (section 475(5)(C)(i) of the Act).

Providing important documents to youth aging out of foster care

- As part of the case review system in section 475(5)(I) of the Act, the title IV-B/IV-E agencies must provide a youth aging out of foster care at age 18 (or 19, 20 or 21 as elected by the agency under section 475(8) of the Act) with his/her birth certificate, Social Security card, driver’s license or identification card, health insurance information, and medical records. Children who have been in foster care for less than 6 months are exempt.
- These provisions are effective 1 year after enactment (September 29, 2015).

Relative notification and sibling definition

- Modifies the title IV-E plan requirement in section 471(a)(29) of the Act for relative notification to include notifying parents of the child’s siblings.

- Defines siblings in section 475(12) of the Act to mean an individual who is considered by state law to be a sibling or who would be considered a sibling under state law if it were not for a disruption in parental rights, such as a termination of parental rights or death of parent.
- These provisions are effective upon enactment unless a delayed effective date is approved. A limited period of delay is permitted when the Secretary of the U.S. Department of Health and Human Services determines that legislation (other than legislation appropriating funds) is required for a title IV-E agency to comply with the plan requirements under title IV-E of the Act imposed by the amendment. The “delayed effective date” is defined as the 1st day of the 1st calendar quarter after the 1st regular session of the state legislature or tribal governing body after enactment. If the state/Tribe has a 2-year legislative session, each year of the session is deemed to be a separate regular session of the legislature.⁶

Adoption and Guardianship Incentive Program- applies to state title IV-E agencies only

- Renames the program “Adoption and Legal Guardianship Incentive Payments.”
- Reauthorizes at the current authorization level of \$43 million for each fiscal year through 2016.
- Creates new incentive categories that replace the old categories. Each fiscal year, a state is eligible for incentive funds in the following categories and award levels:
 - \$5,000 for improving the rate of foster child adoptions.
 - \$10,000 for improving the rate of older child adoptions and older foster child guardianships (age 14 and older).⁷
 - \$7,500 for improving the rate of pre-adolescent adoptions and pre-adolescent foster child guardianships (ages 9-13).⁸
 - \$4,000 for improving the rate of foster child guardianships.⁹
- The base rate is the average rate for the immediately preceding 3 fiscal years or the rate for the prior fiscal year. For fiscal year 2014, states receive an amount equal to half the sum of the total award currently in effect and the total award under the new categories. Also provides a pro rata adjustment if insufficient funds are available.
- Creates an incentive for timely adoptions and guardianships finalized during any fiscal years 2013-2015 if the other incentive awards are less than the appropriation. A state may be eligible to receive an award for a fiscal year if the average number of months from removal to placement in a finalized adoption or guardianship is less than 24 months.
- Allows states to spend the incentives over a 36 month period instead of a 24 month period.
- The guardianship incentive is available for a child who leaves foster care to live with a legal guardian if either:
 - The child was removed from the home pursuant to a voluntary placement agreement or judicial determination that continuation in the home is contrary to the welfare of the child, return to the home is not an appropriate option, the child demonstrates a strong attachment to the legal guardian, the legal guardian has a strong commitment to caring permanently for the child, and if over 14 years of age, the child is consulted regarding the legal guardianship arrangement; or

⁶ See footnote 5.

⁷ The award amount for older child adoptions and guardianships is based on a calculation that involves the base rate of adoptions/guardianships during the fiscal year and the number of children age 14 and older in foster care in the state on the last day of the previous fiscal year.

⁸ The award amount for pre-adolescent adoptions and guardianships is based on a calculation that involves the base rate of adoptions/guardianships during the fiscal year and the number of children ages 9-13 in foster care in the state on the last day of the previous fiscal year.

⁹ The award amount for foster child adoptions and foster child guardianships are based on a calculation that involves the base rate of adoptions/guardianships during the fiscal year and the number of children in foster care in the state on the last day of the previous fiscal year.

- Alternative procedure used by the state to determine that the legal guardianship is an appropriate option for the child.
- States may not use incentive payments to supplant federal or non-federal funds for services under title IV-B or IV-E.

Successor guardians

- Allows continuation of title IV-E kinship guardianship assistance payments if the relative guardian dies or is incapacitated and a successor legal guardian is named in the agreement (or any amendments to the agreement) (section 473(d)(3)(C) of the Act).
- This provision is effective upon enactment (September 29, 2014).

Title IV-E Adoption Assistance Program savings reporting

- Modifies section 473(a)(8) of the Act to require title IV-E agencies to calculate and report annually the savings from the agency de-linking title IV-E adoption assistance eligibility from the Aid to Families with Dependent Children (AFDC) eligibility requirements, the methodology used to calculate the savings, how savings are spent, and on what services. Title IV-E agencies must use a methodology specified by the Secretary or may propose an alternative for the Secretary's approval.
- Title IV-E agencies must spend the savings on title IV-B and IV-E programs; 30% of which must be spent on post-adoption services, post-guardianship services and services to support positive permanent outcomes for children at risk of entering foster care. Two-thirds of the 30% must be spent on post-adoption and post-guardianship services.
- Title IV-E agencies must use the savings to supplement and not supplant any Federal or non-Federal funds used to provide any service under title IV-B or IV-E.
- These provisions were effective as of October 1, 2014.

New Chafee Foster Care Independence Program (CFCIP) purpose and increased appropriations beginning in 2020

- Increases the appropriation by \$3m to \$143,000,000 beginning in FY 2020 (section 477(h)(1) of the Act).
- Amends the purposes of the CFCIP at section 477(a)(8) of the Act to ensure that children who are likely to remain in foster care until age 18 have on-going opportunities to engage in "age or developmentally-appropriate" activities.
- This provision is effective 1 year after enactment (September 29, 2015) unless a delayed effective date is approved. A limited period of delay is permitted when the Secretary of the U.S. Department of Health and Human Services determines that legislation (other than legislation appropriating funds) is required for a title IV-E agency to comply with the plan requirements under title IV-E of the Act imposed by the amendment. The "delayed effective date" is defined as the 1st day of the 1st calendar quarter after the 1st regular session of the state legislature or tribal governing body after enactment. If the state/tribe has a 2-year legislative session, each year of the session is deemed to be a separate regular session of the legislature.¹⁰

New Adoption and Foster Care Analysis and Reporting System (AFCARS) data elements

- Amends section 479 of the Act to require title IV-E agencies to report information on children in foster care who are identified as sex trafficking victims and children who enter foster care after a finalized adoption or legal guardianship.

Annual state child welfare outcomes report (section 479A of the Act)

- Beginning in FY 2016, HHS must report state-by-state data on children in foster care who are:

¹⁰ See footnote 5.

- pregnant or parenting.
- placed in a child care institution or other non-foster family home setting including:
 - the number of children in the placement, their ages, and whether they have a permanency plan of APPLA,
 - their duration in placement and the type of child care institution placed (e.g., group home, residential treatment, shelter, or other congregate care setting),
 - the number of foster children placed in each setting, and
 - any clinically diagnosed special need and the extent of special education or services provided in the placement.
- HHS must consult with states and other child welfare-related organizations on other issues and data to report on using AFCARS, NYTD and other data available to HHS.

Reports to Congress

- HHS must report to Congress on children who run away from foster care and their risk of being sex trafficking victims, their characteristics, factors associated with running away, experiences while absent from care, and trends, among other things (section 105 of P. L. 113-183).
- HHS must report to Congress on agencies implementation of and best practices for the case planning amendments in 475A (b), 475(1)(B), (D), and (5)(C) of the Act (section 113(e) of P. L. 113-183).
- These reports are due to Congress within 2 years of enactment (by September 29, 2016).

National Advisory Committee on the Sex Trafficking of Children and Youth in the United States

(section 1114A of the Act)

- Within 2 years of enactment, HHS must establish and appoint a National Advisory Committee on the Sex Trafficking of Children and Youth in the United States to, among other things advise on practical and general policies on improving the national response to sex trafficking and develop best practices.

The Children's Bureau will provide further guidance through Program Instructions at a later date.

APPENDIX DD

Application for Adult Accredited Residential Treatment Services**For Facilities Providing ASAM Level 3 Services in New Mexico Prior to 01/01/2019**

The New Mexico Behavioral Health Services Division (BHSD) requires use of the American Society for Additional Medicine (ASAM) Criteria and levels of care for all approved Adult Accredited Residential Treatment Centers prior to their enrollment as Medicaid providers of AARTC services. A completed application is required for each location requesting approval as an Adult Accredited Residential Treatment Services provider. The information provided and submitted with this application will allow BHSD to review information regarding the overall program integrity, description of the population served, treatment services provided, staff qualifications, organizational structure, treatment environment, and treatment setting to verify one or more ASAM levels for the program. Applications are maintained for six months. If the applicant has not demonstrated compliance with all applicable requirements during that time, the application will be retired.

Facility Name: _____

Program Name: _____

Facility Address: _____

City/State/Zip: _____

NPI/Number: _____

Contact Name: _____

Telephone Number: _____

Email Address: _____

Please indicate the ASAM Level(s) your agency is applying for:

_____ **3.1 - Clinically Managed Low Intensity (minimal clinical hours: 5)**

_____ **3.3 - Clinically Managed Population Specific High Intensity (minimum clinical hours: 10)**

_____ **3.5 - Clinically Managed High Intensity (minimum clinical hours: 15)**

_____ **3.7 - Medically Monitored Intensive Inpatient Services (minimum clinical hours:22)**

_____ **3.2 - WM - Withdrawal Management**

_____ **3.7 - WM - Withdrawal Management**

(Note: ASAM Withdrawal Management Levels 1 and 2 are not provided at a residential level of care.)

Program Support

Please attest to the following for Adult Accredited Residential Treatment Center services by initialing next to each true statement:

True _____ Telephone or in-person consultation with physician and emergency services is available 24 hours per day 7 days per week.

True _____ There are direct affiliation or coordination with other levels of care and/or close coordination for referrals for other services.

True _____ The agency has the ability to conduct and/or arrange for laboratory / toxicology tests or other needed procedures.

True _____ The agency can arrange for pharmacotherapy for medication services.

True _____ Psychiatric/psychological consultations are available as needed.

True _____ Co-occurring disorders are addressed in the program curriculum.

True _____ Family members and/or significant other(s) are involved in treatment.

True _____ Medication – Assisted Treatment (MAT) is available: **Offsite** **Onsite**

True _____ Monitoring of medication adherence (for both behavioral health and physical health) is provided.

True _____ Random drug screens are used to monitor drug use, shape behavior, and reinforce treatment gains as appropriate to the patient's individual treatment plan.

True _____ Guidelines within the most recent edition of *The ASAM Criteria: Treatment Criteria for Addictive, Substance-Related, and Co-Occurring Conditions* are used as the basis for assessing each individual's needs and services to be provided.

Population Served

Please attest to the percentage of population served in each category. Total must equal 100%:

On average, over the past 90 days, what percentage of residents were treated for moderate or severe substance use and addictive disorder without a co-occurring mental health disorder?

Percentage: _____

On average, over the past 90 days, what percentage of residents were treated for moderate or severe substance use and addictive disorder combined with a cooccurring mental disorder?

Percentage: _____

On average, over the past 90 days, what percentage of residents were treated for a substance use disorder combined with functional limitations that were primarily cognitive in nature? For example: Traumatic Brain Injury, Amnesia, Dementia, Delirium. **Percentage:** _____

Staff

Please attest to the following for Adult Accredited Residential Treatment Center services by initialing next to each true statement:

True _____ Staff are on-site 24 hours per day.

True _____ The Treatment Team consists of medical, addiction, and mental health professionals who are appropriately credentialed and practicing within their scope of practice.

True _____ One or more clinicians are available on-site or by telephone 24 hours per day.

Assessment/Treatment Plan and Review

Please initial next to each true statement about your assessment, treatment planning, and treatment plan review process:

True _____ The agency provides an individualized, biopsychosocial-comprehensive assessment for each individual admitted to residential treatment.

True _____ An individualized treatment plan is developed in collaboration with each individual admitted to residential treatment and reflects that individual's problems, needs, strengths, skills, personal goals, preferences and activities designed to achieve those goals.

True _____ Updates are made to the biopsychosocial assessment and treatment plan to reflect clinical progress.

True _____ The agency assesses the progress and treatment changes daily for each individual admitted to residential treatment.

True _____ A physical examination by an MD/DO, PA, or APRN is performed as part of the initial assessment and/or admission process for each individual admitted into residential treatment.

True _____ Transition and continuing care planning is an ongoing process for each individual admitted to residential treatment. Transition and continuing care planning begins upon admission.

True _____ The after-care plan for each individual admitted into residential treatment includes specific community resources and additional support services that the individual is actively associated with.

Clinical Hours Per Week and Curriculum

List planned clinical services per week. Clinical services are defined as evidence-based, active treatment to directly assist with an individual’s Substance Use Disorder (SUD) treatment and any related co-occurring mental health issue(s) and correspond to the following codes. Check only those services your agency provides in the agency and program applying for approval as an AARTC.

Clinical Hours and Therapy Services	Number of Hours Per Week
Group Therapy	
Group Therapy (Multi-Family)	
Individual Therapy	
Skills Training and Development by a Paraprofessional - Individual	
Skills Training and Development by a Professional - Individual	
Skills Training and Development by a Paraprofessional - Group	
Skills Training and Development by a Professional - Group	
Patient Education Counseling – Group or Individual	
Psychiatric Diagnostic Assessment	
Medication Management	
Medication Administration	
Additional Codes if applicable:	
Total Hours Per Week	

Detail any recovery support services made available:

With the exception of Intellectual and Developmental Disabilities, severe cognitive impairment, or severe functional limitation (which are treated in the ASAM 3.3 residential population), please list any specialty groups to be served in the residential treatment center, such as mothers with children, co-occurring, women who are pregnant, or any specific age groups or gender: _____

Attachments

Please attach a copy of each of the following documents to this application:

- A copy of the agency's certificate showing accreditation of Adult Residential Treatment Center services from either the Joint Commission, the Commission on Accreditation of Rehabilitation Facilities (CARF), or the Council on Accreditation (COA).
- A copy of the agency's most recent accreditation report and any areas for improvement identified by the accreditation organization.
- A weekly schedule of services with the individual, group, educational and/or other treatment services labeled, to validate the service hours listed in this application.
- A copy of each of the facility's policies and procedures regulating visitation guidelines and search/contraband protocol.
- A copy of each of the facility's policies and procedures regulating staff training (including a list of trainings the agency requires), medication administration, behavioral management, restraints.
- A copy of each of the facility's policies and procedures regulating protocols should a patient's condition deteriorate and appear to need medical or nursing interventions (including under what conditions nursing and physician care is warranted and/or when transfer to a medically monitored facility or acute care hospital is necessary).
- Copies of licenses, and/or certifications for all clinical professional staff (employee and contracted staff including physicians, medical staff, and behavioral health service staff).
- Copy of the agency Table of Organization clearly demonstrating Adult Accredited Residential Treatment Center staff and oversight.
- Copy of Assessment template.
- Copy of Treatment Plan and Treatment Plan Review template.
- Copies of training certificates for staff (both employees and contractors): American Society for Addiction Medicine (ASAM) Criteria
- Copy of Pharmacy license and DEA number if pharmacy services are provided on-site.
- A copy of the Lease Agreement/Deed to the site address that reflects the legal name of the applicant as the tenant or owner.
- Copy of the facility floor plan that clearly identifies what the facility site address will entail at each room.
- A co-location listing of all non-substance use treatment services and/or programs provided at the site address listed on the application.
- Original signed and notarized Affidavit and Notarization Form (Application Page 7). A copy may be included in application sent electronically, however an application is not considered complete until a copy of the original and notarized form is received at BHSD.

THE INFORMATION PROVIDED REGARDING THE OPERATION OF THIS PROGRAM IS ACCURATE, TRUE, AND COMPLETE IN ALL MATERIAL ASPECTS.

I certify that the information provided in this application, including information contained in attachments, is accurate, true, complete, and current as of this date. I and my agency providers have read and understand The ASAM Criteria for Level of Care 3, as well as state regulations and statutes relative to rendering and seeking reimbursement for Adult Accredited Residential Treatment Center services through the Human Services Department and Behavioral Health Services Division of the State of New Mexico. All staff practicing in the above noted agency follow the applicable state board and other regulations according to their licensure and scope of practice.

Services provided and Level(s) of Care must be updated if there is a change in services, clinical staff, staffing pattern, or clinical service hours provided. Accreditation as an Adult Residential Treatment Center services provider through the Joint Commission, CARF, or COA must be maintained. Notification of changes and/or updates to services, staff, clinical service hours, or accreditation status must occur both with the BHSD and the MCO's with which an agency is contracted according to each MCO's policies and procedures. RETURN Application and any applicable documentation to:

**Adult Accredited Residential Treatment Program Manager
